Interest Rate Swaps with Rob Kirby - May 11th

To

“Interest-rate swaps are a tool used by big cities, major corporations and sovereign governments to manage their debt, and the scale of their use is almost unimaginably massive. It’s about a $379 trillion market, meaning that any manipulation would affect a pile of assets about 100 times the size of the United States federal budget.” ~ Matt Taibbi in 2013

By Catherine Austin Fitts

This week on the Solari Report, Rob Kirby of Kirby Analytics joins me to discuss the role of interest rate swaps in pushing interest rates down and debasing financial markets, the allocation of our money and labor and our society. This exchange will follow up on our discussion of the role of the US Exchange Stabilization Fund in market intervention and covert financial flows.

Rob is a unique figure in the financial world. He traded derivatives with several large financial institutions. Since founding Kirby Analytics, Rob has consistently educated the independent media about the role of derivatives in centralizing political control and draining personal financial wealth. This financial topic is complex and sophisticated, and Rob makes it accessible to all of us.

In Money & Markets this week I will discuss the latest in financial and geopolitical news, including what the French election means to Europe, the future of the Euro, and global financial markets.

In Let's Go to the Movies, I will review The Eagle, a haunting Danish TV series named after a half-Icelandic half-Danish police officer named Hallgrim Órn Hallgrimsson, nicknamed “Órnen” (the eagle). Hallgrim is lead investigator for an international criminal investigative unit focused on cross-border transnational crimes that takes Hallgrim and his colleagues to Norway, Sweden, Denmark, Russia, and Germany, including interactions with American intelligence agents operating in Europe.

Talk to you Thursday!

**PDF of the 2017 1st Quarter Wrap Up – The Clash of Civilizations – Now Available!**
From the transcript:

A new President and his administration now grapple with how the United States, its economy and its role in the world will evolve from the Bretton Woods system created at the end of WWII and our uni-polar vision of the world. Will the United States successfully adapt to a more globalized, multi-polar world order? This critical discussion, begun in a rancorous campaign, is shrouded by partisan politics and a media “shriek-o-meter” that is distracting at best and dishonest at worst. At the heart of this problem lie the deep contradictions within the US economy that result from an economic addiction to debt, crime, and war.

Prayers for the Year 2017!
Dear Friends, Clients & Subscribers:

Once again we are sending a new Prayer Book as our Christmas Card.

If you would like a complimentary copy (while they last), let us know: details here.

You can view in PDF here and flip book here.

See our 2016 Holiday Greetings here.

We wish the happiest of holidays to you and yours!

The Solari Team

Highlights from Last Week - Bitcoin 101 with Sarah Wiesner
This week on the Solari Report, join me for a fascinating conversation with Sarah Wiesner of Bitcoin Embassy TLV.

Interest in bitcoin is growing. One reason is the price. Bitcoin prices are rising, with market capitalization approaching approximately $25 billion – almost five times greater than the market cap of the next largest cryptocurrency.

Another reason is government policy. With central banks and governments engaged in liberal monetary and fiscal policies, involving both debasement of sovereign currencies and encouraging the creation of paper gold and silver investment vehicles, a stateless currency that limits its issue appeals to investors weary of inflation and market intervention.

The bitcoin market is tiny by financial market standards – we are still at the early stages of the development of it and other cryptocurrencies. At a market capitalization of approximately $35 billion, the entire cryptocurrency market is approximately one-third of the market capitalization of Starbucks.

The market is growing fast – it grew from $30 to $35 billion in the five day since Sarah and I recorded this interview. If the SEC approves the first Bitcoin ETF capital flow will accelerate. We could also face the same paper problem we have experienced in precious metals.

Whatever happens next, digital currency volumes are likely to grow supported by communities passionate about decentralization and financial privacy. According to research produced in 2017 by Cambridge University, there are between 2.9 million and 5.8 million unique users actively using a cryptocurrency wallet, most of them using bitcoin.

The $64,000 question is whether or not a trustworthy digital currency with encryption can operate on a digital infrastructure and platforms that lack integrity, controlled ultimately by the leadership promoting a global war on cash and eager to be relieved of liabilities for sovereign deposit insurance. No less than the The Economist declared on its cover this month “Why computers will never be safe.”
