Under an Ionized Sky With Harry Blazer and Elana Freeland

Under an Ionized Sky with Harry Blazer and Elana Freeland

Harry Blazer: Welcome, Solari fans. Harry Blazer here with a very special guest, Elana Freeland. Elana, say, “Hello” to the Solari subscribers.

Elana Freeland: Hello, Solari subscribers.

Blazer: Elana, who are you? Where did you come from? What do you do?

Freeland: What planet am I from?

I am writing books. I’ve been a writer, I suppose, since I was eight years old and my teacher accused me of plagiarism for a short story. But I’ve done many things in life and studied many things. I am a consummate student of everything. I feel that being alive on the planet is a great privilege and must be pursued with gusto.

It’s just that I didn’t realize how deep this topic was, when in 2011 Adam Parfrey at Farrell House asked me if I thought I could write a book on chemtrails. I had no idea how deep it was going to be, but now I’ve just completed my second book – as you know – and I’m onto the third and hopefully final book on this topic of the planetary assault going on right now.

Blazer: Before we get into this, the reason why we are here is to discuss in particular your second book, *Under an Ionized Sky*. The first one in this series was *Chemtrails, HAARP, and the Full Spectrum Dominance of Planet Earth*, and you have a third one coming out on synthetic biology to kind-of complete this trilogy.

We also have a whole other remarkable series called *Sub Rosa America and the Fall of the New Atlantis*, and that is a five-volume series. We will talk a little bit about all of these, but we are going to concentrate on *Under an Ionized Sky*.

Before we get there, tell me a little bit more about yourself – where you grew up, what your education was, and a little bit more about your life experience.

Freeland: Wow! Nobody ever asks me about that!

I was born in the United States, but I was raised the first few years of my life – until I was eight – by my Romanian grandparents while my mother worked at the Western Union. I grew up in an Eastern European neighborhood of about five square blocks in Detroit, Michigan. It had a huge impact on me because I was really raised around multiple languages and adults who could not speak English and children who could.

We had a lot of freedom, and I adored the music and the dancing and the deep humanity of the Eastern Europeans – all the way from Ukrainians, Russians, Poles, and my godparents who were Hungarian. My grandmother was a Roma gypsy and very valued by the neighborhood for her ability to “see” into the old country to see how their relatives were doing.

I grew up with the idea that this world and other worlds are all converging in the human being and our consciousness. After living in that neighborhood, my mother and I finally left, and we moved to New York City – Manhattan – where she worked all the time and I was a latchkey kid. We went to plays and musicals on Broadway. It was wonderful, and I guess I didn't mind the loneliness.

She would often not get home until 9:00 at night, and I would make my dinner and watch an old movie or something on one of the three channels we had access to.

Then I began to bounce around quite a bit because my parents were finally divorcing, and I would end up at different places. That was probably tough on me. I think my inner world began to get a lot more intense as I recall.

By age 13, I had moved out of my mother's home, and I went to live with my father for the first time in my life. He had remarried and had children, and I then became a popular girl in high school. I was a cheerleader captain and did student council and I really became a tremendous success socially – probably my first one.

Then I was chosen to go to Girls State, which is mock state government. Two students are chosen to represent their high schools, and I was chosen for some reason. I went to Girls State, and my party had a huge success. I was the campaign manager, and then 800 girls voted to send me to Washington, DC to represent them in Girls Nation. This is where I really feel that my political life began.

I went to Girls Nation and I was appointed Librarian of Congress. I spent the week with a group of girls under Lyndon Baines Johnson, who was the Vice President then. John F. Kennedy was President. We went to the Rose Garden our next to last day there and had tea with President Kennedy. It was a huge seminal experience for me. He compared me to his wife. I did look a little bit like Jackie Kennedy back then.

Then I came back to my home state and gave talks to the civic groups who had paid for my trip. Then four months later, he was dead. I then had to return to those civic groups and give a talk about my day with Kennedy in front of sobbing Americans. It was a very deep experience for me.

From there, I came of age in the 1960's. I was one of those fortunate people who experienced an amazing renaissance of sorts in the United States. I was pretty naïve. However, we in the 1960's knew that John Kennedy had been assassinated from inside and that Oswald had had nothing to do with it really.

Then, of course, as you know, Martin Luther King was killed just a few years after that. Then just a few months after him, Robert Kennedy was killed. These were our three heroes, and my generation went into a very turbulent time in which they became subject to the CIA and FBI's COINTELPRO interference with our youth. Our rock stars were killed if they were political. All sorts of things were going on.

A lot of people remember the 1960's as being sex, drugs, and rock and roll, but that's *Time Magazine* and *Life Magazine's* take on it. My experience of it was that we were all spiritual seekers, and we were very political.

I wrote the *Sub Rosa America* series to correct the record, in a way, about my generation, which was just filled with renaissance people – people with amazing intelligence and amazing skills and amazing joie de vivre. Hopefully *Sub Rosa America* does something to correct the incorrect record of the mainstream media.

Then from there I got involved in a variety of things related to health. I studied Chinese medicine, I had spiritual experiences that changed my inner life over time, I became involved in Rudolf Steiner's ideas, and I was trained as a Waldorf teacher, which I did for 16 years, founding four Waldorf schools in Washington State, along with many other people.

Now I've been writing steadily for about 20 years. Ghostwriting, then writing *Chemtrails*, *HAARP*, and *the Full Spectrum Dominance of Planet Earth*, and now *Under an Ionized Sky: From Chemtrails to Space Fence Lockdown*. I give talks and I'm on radio a lot. I'm trying to awaken people to what is going on right in front of our faces. Since we've been taught that our perceptions are not good enough, that we need experts and we need high-tech devices, people don't really recognize what is happening to our planet. Those few who do are getting older and leaving the planet – dying.

I think right away of Dr. Rosalie Bertell, epidemiologist par excellence. She was the first one to say what I am saying, which is that the planet is being weaponized by the Military-Industrial-Intelligence Complex. That's the path that I've been on now for about six years.

Blazer: Elana, I would like you to do something for me because there is a fair amount of information about you on the net, and also many of the talks that you have given. The subscribers can learn a lot from them.

In one of your recent talks in Santa Cruz where you were promoting your book, you opened with a five-minute speech. I would like for you to give that now, and then we will go from there.

Freeland: Wonderful. I would be pleased to do so. I wrote this speech, and it says something very important that I want people to know. (Below is the full text from that speech – which is a bit more than what was recorded):

The fact is we are living in strange, science fiction times, not the least of which is how issues upon which the future welfare of the Earth and its peoples hinge are marginalized as “conspiracy theory,” and scientists and doctors who step forward to tell the truth are discredited, ostracized, or killed. High-tech research, whether at university, corporate, or government labs, is funded by the military and its myriad contractors while compartmentalization, need-to-know security clearance, and non-disclosure agreements signed in blood keep the secrets as the patent office and “good old boy” peer review system play gatekeeper. “Divide and hide” is the name of the national security game.

The Internet too is compromised but is the only town square and educational network we have. Every day, what lies beneath the “national security” shroud thrown over full spectrum dominance technologies coming online daily at a pace that defies reason must be reassessed. What university could we turn to for the kind of National Security State information breaking daily, especially now that our university system is part of the military-industrial-intelligence complex?

As a writer and student of my time, I seek to frame the context by which to interpret the pieces of a future already here. Like the Egyptian myth of Isis and Osiris that Freemasons are so fond of, the body parts of an ancient globalist dream to which we are all subject lie scattered around us, awaiting our ability to piece it all together and interpret what is being hidden from we the people. Our school conditioning was to keep issues compartmentalized and separate from each other—geoengineering, GMOs, genetics, WiFi, 5G, Morgellons, Transhumanism, vaccinations, electromagnetic targeting of individuals and populations, mind control, etc.—when the truth is they are all *connected* by a common globalist intent, just as CERN, ionospheric heaters, fracking wells and wind turbines are all calibrated to work together for Space Fence control.

The issues confronting us are separate battles in a vast, ongoing spiritual war for the future of humanity and definition of life itself. Extreme weather, water quality, immune system degeneration, creature extinctions, acid oceans and alkalized soil—all is occurring in tandem with the moral degeneration of society, death of the middle class dream, rise of Agenda 2030 and its artificial intelligence, optogenetics and neuroscience . . .

. . . All are scenes grown large and wireless from the elite Luciferian dream known yesterday as internationalism and today as globalism. The Earth and its atmosphere are being geoengineered, and it is not just about weather, wireless communication, drones and directed energy weapons. It is about aiding in the breakdown of the biosphere so all of life can be genetically altered and controlled.

Hopefully, a contextualized bigger picture will help you decide on your own particular battle strategy. Once we are no longer fragmented and blinded by fear, we can examine the battlespace drawn up by those who despise the long and slow evolution of human free will and seek instead to electromagnetically imprison us in a “hive mind.” May we draw courage from each other and our ability to *see* and share what we see.

In his 2012 book *Covert Wars and Breakaway Civilizations*, Joseph P. Farrell quotes General of the Army Douglas MacArthur in his farewell speech “Duty, Honor, Country” at West Point, May 12, 1962. General MacArthur definitely was privy to the big picture:

We deal now not with things of this world alone, but with the illimitable distances and as yet unfathomed mysteries of the universe. We are reaching out for a new and boundless frontier. We speak in strange terms of harnessing cosmic energy, of making winds and tides work for us, of creating unheard of synthetic materials to supplement or even replace our old standard basics; to purify sea water for our drink; of mining ocean floors for new fields of wealth and food; of disease preventatives to expand life into the hundreds of years; of controlling the weather for a more equitable distribution of heat and cold, of rain and shine; of spaceships to the moon; of the primary target in war no longer limited to the armed forces of an enemy but instead to include his civil populations;

of ultimate conflict between a united human race and the sinister forces of some other planetary galaxy; of such dreams and fantasies as to make life the most exciting of all times.

“The most exciting of all times” may yet also prove to be the most dangerous of all times, as well. Gen. MacArthur was not waxing eloquent; he was already looking through the lens of the military doctrine of *full spectrum dominance* essential to a Space Age more about Nikola Tesla and James Clerk Maxwell than Isaac Newton and Albert Einstein—a Space Age not of the law of conservation of energy but of torsion fields, rotating plasmas transducing zero-point energy, manipulation of the local fabric of space-time, longitudinal scalar waves and interferometry weapons such as we saw on 9/11 without knowing what we were seeing.

Warfare is now asymmetrical and physics nonlinear. In near-Earth orbit and space, we have orbiting and geostationary satellites armed to the teeth with surveillance and directed energy weapons in the name of weather detection and media connectivity, sounding rockets spewing “dusty plasma,” smart dust and sensors, and sundry experiments in space, on the moon and Sun—all directed by and run through quantum computers engaged in their own artificial intelligence evolution counter to ours.

That we live in the midst of the sentient world simulation (SWS) quietly built around us in the name of comfort and convenience and communication has escaped most of us, given the *busyness* of life. This ignorance must be corrected, as any soldier or general on a battlefield knows.

It is also essential to a meaningful life to educate oneself about where and when one lives, especially when all of life, including our bodies and brains, is so vulnerable to the *resonance* that is under assault from wireless frequencies capable of being intentionally pulsed to achieve psychological and physical effects.

Our planet's Schumann resonance of 7.83 Hertz is being changed. Could this be about the Singularity or Transhumanist future that global elites like Ray Kurzweil and Google's Singularity University are herding us toward with RFIDs and NEMS in products and people, remote neural monitoring, brain-computer interface, and humanoid robots deemed to be citizens of nations?

Blazer: Again, *Under an Ionized Sky*, and the subtitle is: *From Chemtrails to Space Fence Lockdown*. Of course, chemtrails is a term that the alt media and the wackos invented, correct?

Freeland: 'Chemtrails' was invented by the US Air Force Academy that all good pilots go to.

Blazer: Hold on a second. You mean the 'wackos' and alt media didn't invent the term 'chemtrails'? It came out of the US Air Force?

Freeland: Yes, it's from the US Air Force. It was also in the executive summary for the High Frequency Active Auroral Research Project in Alaska, known as HAARP – that wonderful acronym. No, it comes from the military.

Blazer: Hold on. I'll get to the punchline here in a second.

In this whole thing here, you're talking about a 'space fence'. That is another thing that was invented by imaginary weird people, right?

Freeland: No. You know that it was invented by the military. We had a space fence under SDI (the Strategic Defense Initiative) under Reagan, Bush, and Cheney.

Blazer: But the word 'space fence' is just something that you invented, right?

Freeland: No, that is their term.

Blazer: You mean Lockheed Martin's term?

Freeland: Yes, Lockheed Martin.

Blazer: The reason why I'm saying this – and I'll get to the punchline in a second – is you can go to YouTube and just query "Lockheed Martin's Space Fence" and find videos where Lockheed Martin talks about their space fence.

What I want to mention is this. I got serious, after I sold my business in 2001 to Whole Foods, about trying to figure out the real deal. That is when I spent some serious time with Catherine, but I was spending many, many hours a day for years just trying to understand, but starting with a very key issue which was dear to my heart, and that was the Kennedy Assassination, as it was dear to you.

I came across this very monumental book that changed my life, which was Fletcher Prouty's *The Secret Team*. So that is always on my number one reading list for people who want to learn about the deep state. Here is a guy who was basically the liaison between every intelligence operation and the military, and he never signed a nondisclosure agreement. He is one of the guys who had almost total visibility, and then went on to talk about how things really work.

This book of yours is, to me, of equal importance. So in a way, I feel that there has not been another book (since Prouty's book) that is as important on the deep state and what we are facing as this book that you have come up with.

One of the reasons why it is so important is because it is incredibly well-documented. When you make these claims that at first somebody reading the text would go, "Huh?" and then on every page you have three, four, or five footnotes at the bottom, oftentimes they refer directly to military documentation – prime sources – and researchers in the field. You do the same thing with your presentations on YouTube, especially the Santa Cruz presentation. We are going to link to that and to Lockheed Martin's space fence videos. We are going to link to this Air Force document that you mentioned.

As I read your book, I always highlight, but every page in your book has copious highlights. Then on very, very key points I also use arrows. There are more arrows in this book than any other book I've ever read.

I just want people to understand. This is also on Catherine's 'books you must read to understand 2018 and the future and how to protect yourself'.

This is a masterpiece, Miss Freeland. I have known you now for a number of years, and I've been a big fan and supporter of yours. I'm a little bit startled by the depth of the scholarship represented in this book.

No longer is there any doubt about what they call 'chemtrails'. No longer is there any doubt about geoengineering. But even much more significant is that there is no longer any doubt about this massive effort to control, to surveil and to almost create a 'prison planet' like Alex Jones *Infowars*. I always wondered why he called himself www.PrisonPlanet.com.

I'm wanting to use this session as a relatively short one that introduces you to the subscribers who don't know you. I also want to introduce them to this book, and introduce them to some key references that will be in the notes. I want to then come back in the future and spend serious time – maybe even chapter by chapter – going over your book. That's how important it is.

What is the 'space fence'?

Freeland: First of all, thank you for those kind words. You are a really deep reader, Harry. Of course, that is a challenge for many people today whose ability to concentrate has been greatly undermined by mainstream media and the technology that we now have for educating ourselves.

The space fence, like I said, started out with the Strategic Defense Initiative as a sort-of necklace across the south, from the East to the West in the United States. It was radar installations that were watching the sky.

They have continued that narrative now that they have the atmosphere ionized from the technology all the way from the chemical trails loaded with the nanoparticle heavy metals for conductivity to the ionospheric heaters, all of the radar installations, all of the NexRads across the United States, and all of the wind farms and the fracking wells. I explain thoroughly the infrastructure of this tremendous effort to turn the entire planet into a surveillance instrument, yes, but also a lockdown in many, many ways.

Lockheed Martin's narrative is that the space fence is primarily counting debris rotating around the planet so that we can protect our satellites, which, of course, are essential. They are the eyes for all defense of the military. But what they don't say is that the space fence is also able to see onto the planet. The level of surveillance now, thanks to Billy Hayes, the HAARP man who led me through one infrastructure element after another and pointed the way for my research, the ability to see down to a half-centimeter from far-distant space satellite geostationary or mobile – is extraordinary. I think that this is part of our problem of why, even when people hear me talk or read, they have a hard time imagining the level of control that is going on now that we have an entirely wireless world and wireless technology that people are addicted to.

All of these are what the military calls ‘dual use’. These are all about using it for military objectives while making profits from civilians for their convenience and comfort and entertainment. It’s pretty big. I completely admit that, and that is what I try to show, and I try to break it down a bit for people to get hold of how it’s working together through calibrating these instruments and through the pulsing of frequencies, this concept of pulsing frequencies – everyone is going to have to get beyond their high school science courses and get interested in the technology that they are dependent on now. They are going to have to learn how it works a bit. That’s what I tried to get going by writing *Under an Ionized Sky*.

Blazer: When I take a look at NASA’s website, they describe the atmosphere primarily in terms of five layers. There is a troposphere, which is basically from the surface to five to nine miles up. There is the stratosphere, which is from the troposphere up to 31 miles and includes the ozone layer. There is the mesosphere, which goes from the stratosphere up to 53 miles. Then there is the thermosphere, which goes from the mesosphere up to 372 miles. Then there is the exosphere with an upper limit of up to 6,200 miles.

Then there is this other thing called the ionosphere, which I found very interesting. It’s an abundant layer of electrons and ionized atoms and molecules that stretches from 30 miles to edge of space – some 600 miles up – overlapping into the mesosphere and thermosphere.

Freeland: That’s right.

Blazer: People think of the ionosphere as being one of those layers, but it's actually not. It's a combination, and that is really where they are concentrating in terms of where they are creating this space fence and ionizing the planet. Is that correct?

Freeland: The space fence goes to the top of the ionosphere. A lot of the things that are creating what I think of as the space fence near Earth orbit, can be thought of as a ring around the planet, as depicted in the illustration that I have on the book cover. That ring, like a Saturn ring, rests around the equator and probably starts up at the top of the stratosphere. It's not that high up – not as high up as the top of the ionosphere by any means, but it is essential to have that level of metal conductivity in nanoscale.

Most of the ring around the planet is formed of metal nanoparticles spewed by sounding rockets that really don't go much higher than the stratosphere and then centrifugal force draws them around the planet. They are testing various things up there, and that is why they are called 'sounding rockets'.

They will spew particularly lithium from their combustion chambers on their way up, and those nanoparticles of that lithium and whatever else is being spewed will eventually rest in that ring, a ring very similar to that around Saturn.

What I try to point out as the book progresses is how that ring is about the lockdown. If you can imagine that it is very much a communication device – sort-of like a CD-ROM would be my picture of it.

It can hold information, it is essential to communications over the horizon from the ionizing going on in our atmosphere, thanks to the ionospheric heaters zapping the ionosphere. It would also have to do with vessels and exotic propulsion craft going out into the solar system.

To me, the space fence is primarily about holding us between that ring and our dome of ultra-low frequency in our ionized atmosphere. We're really in it now. It's not a matter of the future; we are in it now.

They came out recently with an article about how this ULF buffer has formed around the Earth. Well, that has to do with the ring forming around our planet, all the way down to the ground installations. In a way, we are held in the vise grip of this Tesla communication dome. You could think of it as a Faraday cage as well, except that we are kind-of trapped inside of it.

That is my conception of the space fence. It is far more than counting debris in space and protecting our satellites; it is actually a means to have full-spectrum dominance over Planet Earth before setting out for the rest of the solar system.

Blazer: So we have kind of made the planet into a wireless network.

Freeland: Yes. You mentioned 'prison planet'. I think of C. S. Lewis's science fiction book *Out of the Silent Planet*, and I've been spooked many times while writing the second book. It just sounds so much like what he described where we are cut off from the cosmos. We cannot hear the cosmos, and the cosmos cannot hear us. This is dire. We can't see the stars at night.

During the day we are doing without 22% of our sunlight. We have 18% less oxygen in our bodies. We are, in a way, becoming the Silent Planet.

Blazer: There is a gentleman named Clifford Carnicom who wrote the introduction to your book. Who is Clifford Carnicom, and how did you get to know him?

Freeland: Clifford is the independent scientist who really provided the very first clarion call - trying to wake us up back in the late 1990's. He and his wife were living in northern New Mexico, and Clifford was observing in the sky – that beautiful azure sky of New Mexico – as long, white trails slowly dissipated into a thin cirrus cloud cover, and he began to collect data from his HEPA filter and from precipitation.

He had been a scientist for the Department of Defense and the Bureau of Land Management and had quit all of that and had become a computer consultant, but in his spare time he began to look at this data. He, of course, was constantly on a shoestring budget and really needed much more sophisticated equipment, but he is very innovative. He was able to look at a lot of things.

When I got back from England, where I lived for many years, because I had lived in England for a few years, I came back to Santa Fe where I had gone to grad school. That is when I met Clifford through a friend, and we all began to have breakfast together. Clifford and I would end up talking about his recent findings.

I was very interested because of the files that I was keeping for the *Sub Rosa America* series that I was writing, and I had one on chemtrails and one on HAARP. It was through Clifford that I began to realize that the two were really very integrally set up together to produce a certain kind of atmosphere.

Clifford collected my blood and my saliva, and I looked under his microscope and saw the Morgellons creature that he had really discovered and was trying to analyze and test in various Petri dishes.

It was sucking the iron out of my red blood cells. You can imagine how wakeful that experience was! When I eventually returned to the Pacific Northwest, Adam Parfrey at Feral House asked if I could write a book on *chemtrails*. I had done some work for Adam while I was in England. I think that he was trying to give me a chance to publish a little broader.

Blazer: So in addition to the lithium that is being disbursed, obviously aluminum and barium – nanoscale – have been major components.

The other thing that Clifford has told us is that there are biologics being dispersed as well.

Freeland: Yes, along with the sensors that are also nanoscale and the microprocessors, which are tiny computers on the nanoscale. We have inhaled all of these. With the biologicals, the Morgellons is probably only one of the biologicals that is being prototyped.

When you're talking about planetary control, you're going to have to have more than a lab – or even 100 labs – to experiment with. You're going to have to have open field experiments. That is kind-of what I see going on now.

When I say that the atmosphere is ionized, I'm talking about plasma. We have a fourth state of matter now completely in our atmosphere. We're not breathing the same air that we were breathing years ago. This is heated because the atmosphere is electric-ready all the time, especially with the heavy metals that are falling slowly – lofting down. Nano more than micron-scale offers a better loft and therefore drift rate down from the stratosphere where the jets are laying these, and also the rockets.

It's an open lab in the sky. I'm on Facebook a lot and on the internet, and I see that people are discovering these things but have no scientific context. So of course they think that what they are seeing are UFOs or aliens or whatever. But a lot of plasma research is going on in our skies, and any time that you see something that is luminous and is zipping across the sky, they will tell you that it's a meteor or an asteroid in the newspaper, but this is just information to cover over the national security status of all of this that is going on. It is all under wraps. That's why it's important to return to our perception and believe, "I'm seeing something, but I don't have the right context. I need to study. I need to read something."

That was my hope. I wanted to give people enough to read to get them started on realizing what is up there and what is going on with the space age that we are already in.

Blazer: “Plasma: An ionized gas consisting of positive ions and free electrons in proportions resulting in more or less no overall electric charge, typically at low pressures (as in the upper atmosphere and in fluorescent lamps) or at very high temperatures (as in stars and nuclear fusion reactors).”

So plasma is real. It’s even recognized by science, although it’s a little hard to get scientists to recognize scalar waves unless you look in the right places. They’ve been dealing with it for decades.

Freeland: They call ‘scalar waves’ gravitation or ‘gravity waves’ and that is okay because in a way scalar waves are like that. The important thing is that we are witnessing scalar technology, and scalar waves are different from electromagnetic waves, but each can be converted into the other. That is going on as well.

For that I always recommend that people read someone who really knows a lot about it, and that would be Tom Bearden, and in Europe it would be Konstantin Meyl, considered by many to be the next Tesla.

Blazer: Hopefully this has served as a potent enough introduction to get people interested in getting your book, looking at some of the presentations we are going to have on the link, and then I want to follow up. In your book we have got an introduction, Planetary Lockdown, Geoengineering in the Deep State, Catching up with Chemtrails, and HAARP. Chapter 1 is Project Cloverleaf, which is a historical project that creates a lot of context for all of this. You have Chapter 2, which is Ether, Scalar Waves, and Plasma.

Chapter 3 is The Nano Assault. Chapter 4 is Sky Anomalies. Chapter 5 is The Revolution in Military Affairs. Chapter 6 is Mastering the Human Domain. Chapter 7 is The ‘Star Wars’ Space Fence Rises Again. Chapter 8 is Boots on the Ground. Chapter 9 is The Temple of CERN. Chapter 10 is The Covert Ascendance of Technocracy. Chapter 11 is The Unlawful ‘Silent War’ Against Citizens. Then you have a very interesting conclusion which is ‘Cure Yourself’ and some recommendations on how to protect yourself.

Let me just make two quick comments. I spent a lot of time in the woods in Montana, and I love to hike. I’ve been doing it since 1969. What I will tell you is that there is a qualitative difference in the experience between then and now. Two of the things that I can say is that the sky is no longer blue, and the trees are no longer really healthy. When dead trees fall and come across my road, I have to cut them up and take them away. In studying them, they are lighter (in weight); they don’t have as much substance (mass, density). They have internal porosity that wasn’t there before.

People blame it on the beetles and droughts and this type of thing, but the beetles are there because of all of the damn aluminum that has been bombarding our ecosphere.

The question is: How the hell could this be going on in front of our face for decades now, and you can’t get one government official or one national government or anybody to come clean about what is going on? You get bits and pieces here and there, and of course you look for documentation. Your book has put it all together. Then you can see, “Of course it’s going on.”

Who has the power on this planet to make this happen? Maybe that also explains about these \$21 trillion of undocumented adjustments in the DOD and the HUD budget that Catherine has been talking about for ages.

Who has this kind of power? I think that question, in a way, has to be answered. Otherwise, people will say, “This could never happen. How could you get everybody to just never say anything about it?”

Freeland: It’s an easy answer for me. I spent so much time when writing *Sub Rosa America*. I spent so much time trying to walk in the shoes of the global elites and what they were like. I was fortunate to have a couple of clients when I was ghostwriting who are from those families, so I was able to learn from them about pretty horrendous childhoods in preparation for wielding the power that they would have to wield as members of these dynastic families. So I would have to begin with dynastic families. The ones who I always think of are the ones who walked away from World War II richer than they had ever been, and that would be the big pharma families of Europe.

Next would be organizations formed by the dynastic families and vast international corporations which dominate all of the major industries that leech off of the poor primarily. They all form the Council on Foreign Relations and the Trilateral Commission.

The fascinating thing is that like the ‘chemtrails’ term that became a tinfoil hat term that was really a term that belonged to the military, the same thing happened with the dynastic families –

the Rockefellers and all of the usual suspects. They become the subjects of “conspiracy theories”, and yet these theories were often as close to the truth as you can get, but they were used to discredit people.

There is some very sly capability in these people who are able to continue from generation to generation and maintain and double the wealth of their family or their corporation or however you look at it. These are the people running things. They are running the military. I constantly try to use the term ‘Military-Industrial-Intelligence Complex’ because there are a lot of good people in the military. There are a lot of good people in the intelligence apparatus. There are a lot of good people in any of these, but as a conglomerate and a top-down hierarchic structuring (these organizations are problematic).

Then, of course, in *Sub Rosa America*, I go much deeper into the occult aspect which has to be mentioned. A lot of these people at the top of the rungs of these families and corporations are very savvy to a lot of things that are considered occult or hidden. So it’s not hard for me to figure out how this happens, and you use fear and you use greed as whips to keep people in line. You take film of them in pedophile acts, and you maintain those files, and you will have slaves forever who will do your will. That certainly is how it works. It’s just that ‘we the people’ have been slow to come to this knowledge, particularly in the United States, because we were bought off for decades by convenience and toys and two cars in every garage, etc. in the capitalist dream.

We are slow on the uptake, and it is only now that we are going to begin to suffer that people are finally interested.

I've been a radical for all these decades, and I've lived on the edge of society in order to keep awake and to keep doing my work – being able to teach certainly, because I am certified to teach.

You have to remain awake and not drift into all of the desires and pleasures offered by a religion of materialism, which is basically what this country has chosen.

Blazer: I am feeling safer and safer because, after all, our progressive youth and progressive z, x, and millennial generations are out there telling us that the real enemy is the NRA and that we should give up our assault rifles.

Freeland: Or that our real enemy is the Russians. They are bringing that one back.

Blazer: Right. Elana, this has been an effective introduction. I want to circle around and come back to you so we can go into much more depth. Hopefully this initial interview will encourage folks to get your book, study your book, and study some of the links that we have given because I don't know of a more important subject than this. I also don't know of anything that connects the dots more than your book.

I am honored to be a friend, a supporter, and I am also just very grateful that you have put in this work and continue to do so for your next volume, *Synthetic Biology*, which will complete the trilogy.

With that, I can say adieu but not farewell, as they say, because we will be back at it. Is there anything else that you would like to tell the listeners before we sign off on this one?

Freeland: They can find the books at Amazon, and Feral House is the publisher. I do hope that people will read these books, even if it is just a few paragraphs a day, because knowledge is power. I know that this is the way. There is no marching in the streets against this one. There are no petitions against this one. There is no democratic process for this one. This is national security, and our greatest hope is to teach ourselves what the technology is, what it can do, and then to make the changes in our lifestyles to prepare for the effects of those technologies.

Blazer: Do you have a website?

Freeland: I do. It's always under construction because I never have time to go on with my web designer and nail everything down. It is located at www.elanafreeland.com. They can also find me on Facebook. I have two private Facebook sites in which they can just ask for membership.

Blazer: Elana, thank you so much for your time today. We will be back with each other, I hope, in the very near future.

Freeland: Thank you so much, Harry. It has been a pleasure.
