## Deep State Tactics 101 Part II with Catherine Austin Fitts

## Deep State Tactics 101 Part II with Catherine Austin Fitts

June 6, 2019

---

**C. Austin Fitts:** Welcome to The Solari Report. This is Catherine Austin Fitts and I am delighted that you could join me for Part II of Deep State Tactics 101. We are covering those tactics that I bumped into and dealt with in all the various events described in *Missing Money: A Personal History, 1989-2019*.

In Part I of Deep State Tactics 101, we covered my **Introduction, Solari Report Resources, Control System Goals**, and the first two of sixteen **Tactical Areas**. The first was **Faith, Hope, and Love**, and the second was **Health**.

If you haven't listened to Part I, I strongly recommend that you go back and begin there. There were many issues discussed in the first three parts that are essential background for our discussion in any particular area.

In Deep State Part II, we are going to continue with the next two areas of **Tactics: Communication/Surveillance** where we will be talking about the **Systems, and Mind Control**.

We will cover the remaining **Tactics** areas in Part III, IV, V, and as many as it takes. Then, finally, **Hard Times** – my personal worst – is where I will close with the ones that I found to be the most difficult to overcome. I think there are instructive information and insight in that. To conclude, we will cover **Helpful Strategies**.

I am a great believer that if we can face it, God can fix it. My goal is that I want you to see the game because it's amazing how when you see the game, you can duck a lot.

Finally, **Closing Thoughts** will end the series.

The full outline for the Deep State Tactics 101 series is in all the commentaries. If you need that notice that says, "You are here," just jump onto the commentary, and you can see the total outline and see where you are in the full outline.

Let's dive in:

**C. Communications and Surveillance.** We are increasingly operating our world through communications and information systems. It's important to understand that they are thoroughly compromised, and they were from the beginning.

It's amazing how much time and money you can save if you can see what's happening, and there are many, many ways to protect ourselves. That's not my focus for this discussion, but they exist.

First, you need to understand what is happening, and you need to assume as a practical matter that your systems are deeply compromised. They are designed for the well-being of the people who own and control them, even though we are expected to finance them.

In Part I, I described one of my frameworks for the world. Sometimes I see the world as Disneyworld, although I've never been to Disneyworld. I had a friend who took the tour of the parallel universe underneath Disneyworld that is used to manage and create the upper level. So above ground, you have Minnie and Mickey and the Magic Castle. Below ground, you have a whole parallel universe of people who are rigging this lovely make-believe world upstairs. I believe reality is a combination of both, and Minnie and Mickey are up there in the official reality.

Much of that is engineered through the systems. For example, you could never have stolen \$21 trillion or whatever the number is – whether it's laundering the \$21 trillion out or laundering it in – without digital systems. You could never have run all the money secretly, whether it was fiat currency, slush funds, hidden system of finance, or black budget. The systems, particularly the information systems, and all the communication systems – whether it's the post office, courier, or satellites – are essential to running an official reality very differently than the actual reality. It all comes down to being able to optimize your financing in total reality and using it to construct and manage and police the official reality.

When I was litigating with the Federal government, I learned a great deal about systems. I had been very interested in the information/communication systems when I was Assistant Secretary. I was learning a lot about them before I left, and I was there for 18 months.

When I left and started to discover the extent of the corruption during the litigation, I learned more when I ran Hamilton, and we ran the loan sales as a financial advisor for HUD. But it was during the litigation that I plumbed the depths. I couldn't figure out how all this corruption could be going on and me not knowing, and the people that I trusted not knowing.

I recorded – at the request of my attorneys – the Kemp tapes. They were six 90-minute cassettes that described chronologically everything that happened to me. Then, because of the extent to which I was a target, I was now trusted by a variety of people who had worked in covert operations. They started to teach me about financial fraud out of HUD. I am always quoting one of them who said, “Oliver North said that HUD was the candy store of covert revenues”.

I started looking at all the transactional models that the intelligence agencies had used to basically do this fraud and pull out plenty of money from HUD. Then I went back and compared that information to the Kemp Tapes. It was very revealing because it was as if, “Oh, that's what that was,” and, “Oh, that's what that was.”

Slowly, I figured it out, but it was clear that so much of it was engineered through the IT systems. If you look at the career staff who were in on the deal, they were the people who ran and controlled the IT systems. That is why I keep harping between the New York Fed and their member banks and the IT contractors to run the IT systems. A lot of these ‘shenanigans’ worked through the communications and IT systems, and those people are legally under the law, liable for them.

You would even see the occasional death of someone who got too close to the information: The budget officer mysteriously died in such-and-such Federal agency. So, you got these reports of people who became too close to the information.

Before we dive in and talk about all the different ways that the system is used, I want to talk about sources because there is now a wealth of fantastic sources that can help you understand this and look at it from different points of view.

If you can really grok how the systems are being used, we all want to connect and communicate, and get the average person to finance you building their control grid. It's somewhat gruesome, but these are great sources, and I recommend them to you.

When I started to do The Solari Report, you didn't have this kind of wealth of sources, and now you do. So, let me describe some of the Solari Reports that I think are special. First and foremost is our interview with Bill Binney. He is a very high-level NSA technical expert who really understands the intelligence systems, the phone systems, and the information systems.

If you listened to our first interview with Bill Binney and then watched the interview that we posted as 'Let's Go to the Movies', you will find that very informative.

The interview that we just did with Patrick Wood is essential on technocracy because AI software and digital systems allow the leadership to replace markets and market process with primarily technocracy.

They think that they can control with AI software, and millions and millions and millions of microscopic, micromanaging rules. I don't think that it will work, but they are serious about it. All the professions know what it feels like to have technocracy rolled out. That is mainly what has been happening in healthcare in the United States.

Katherine Albrecht, who is the author of the book *Spy Chips*, did marvelous early research on warning us as to how the digital systems are going to work and how chips and chip technology is being integrated with everything. In fact, if you listen to the interview with Alana Freeland, you would know that they are trying to integrate the equivalent of chips into our bodies in the air. It's the ionization of everything.

**Documentaries:** There were two documentaries made by Austrian filmmaker Friedrich Moser about Bill Binney. The first is *A Good American*, and the second is *The Maze*. They are excellent.

You should watch the documentaries and movies about Snowden. The movie is called *Snowden*, and the documentary that I would recommend is *Citizenfour*.

A very important documentary for understanding systems in this world because it really shows you the power of control and the global reach through the systems is called *Zero Days*. It interviews several people from the NSA, and it's about the Stuxnet virus that the NSA and the Israelis developed to compromise Iran's nuclear effort. It really shows you how deeply dependent for power and control the unipolar world has been on digital systems and the role of Israel. You see Israel all over the Silk Road, trying to get everybody on their digital systems.

Finally, there is a documentary that Katherine Albrecht recommends, and she is interviewed in it. It's called *Shadow Government*, and it does an excellent job of making the surveillance systems visible to you. I think it's well worth watching just to see the visibility that it creates around the systems.

One of the reasons that we do 'Let's Go to the Movies' on The Solari Report is because movies are really useful in helping you see the invisible. *Enemy of the State*, of course, is one of my favorites. We put the trailer up in Part I in the commentary. It's a very good description of where the NSA technology was as of the early 1990's or maybe even the 1980's.

*The Kingsman* and *The Cell* are two dreadful movies that I always try to get people to watch because they go to the heart of weaponizing populations and using a population as a weapon of war. If you live in Seattle, Los Angeles, or San Francisco, you are dealing with it now. You have drug-addicted populations who are literally being used as a weapon of war to push the middle class out and make gentrification less expensive for the 'big guys'.

Another movie that I love was the 'Movie of the Year' several years ago on The Solari Report: *The Lives of Others*. It's about some people who are under 24/7 surveillance by the Stasi. It shows a 24/7 surveillance operation when we use humans to do it. Now, of course, we use all digital systems and AI software.

Watch *The Lives of Others* and imagine that you have the equivalent of a software-full Stasi team on you 24/7.

There are 325 million residents in the US, and they can put an AI software team 24/7 on every one of us, and they do. Remember, the goal is not just surveillance; the goal is consumer sales, pornography sales, and control files. Think of this as a harvest system, and there are many different ways of making money on that data.

I lived with 24/7 surveillance during the litigation, and it was quite a transformation. Go to a world where you think you live in private to a world where you are under 24/7 surveillance.

It took a while, but I got to the point where I was in a state of amusement. By the time that I sold my house in Washington in 1999, and had transitioned to a system of living in four places on an unpredictable schedule and continually trading the cars that I was using, it was basically designed to deplete the contract expense.

I was convinced that it was a contractor on a cost-plus contract who was doing all of this. So, my new system was designed just to ‘blow their costs through the roof’. I figured that they would go in for contract reauthorization, and now that many of the phony frames had failed, they wouldn’t get it. That is probably what happened, but it was still easy for them to monitor phones wherever I was.

One day I was in my apartment in Northern Virginia (after I sold the house), and was talking to my attorney. She asked my advice on what was the best place to get a manicure in Washington. So, we started to talk about what was the best place to get a manicure. I had this feeling, but assumed that most of the listening – except for various strategic moments – was only by software and recorded, just as all 325 million of us are.

I had this feeling that someone might be listening, and I said, “Carolyn, I have to tell you that I feel really sorry for the FBI guys. Think of it: You went to law school, you did really well, you got interviewed, you got yourself a job at the FBI, and your goal is to save the world from bad guys. Then the next thing you know, here you are on a Saturday morning on the dumpster shift, and they are having to listen to you and I talk about where we should get a manicure. I feel really sorry for them.”

Suddenly the phone went, “Click, click.” You could hear that they were laughing and agreeing with me.

I said, “Carolyn, did you hear that?”

She said, “No, I didn’t hear it.”

I said, “Hey, guy, she didn’t hear you. Can you do it again?”

The phone went, “Click, click.”

Ultimately, we are all just trying to get through the day. It’s quite amazing who ends up being your ally.

When I started this series I said, “There are allies everywhere.” I have to tell you that there are. Most of the people who get thrown into doing these things went to work for the government and the FBI because they wanted to do good, not because they wanted to follow around and torture people like my attorney and me.

Another thing that happened right after that was when I went to New York for a business meeting. I came through Penn Station. I'm was big on project management then. We had a major project management job because we had 12 tracks of litigation; we had 18 audits and investigations; we had the smear campaign; and we had physical harassment. So, there were many different modules to this project; it wasn't only the litigation because you had to deal with all of it, and it was quite immersive.

Our project management name for the entire project was Gideon. You all know how much I love the story of Gideon. So, the Gideon name always inspired me and our name for the entire thing was Gideon.

So, I walked through Penn Station, and if you don't know this, the intelligence agencies regularly hire and pay writers to write books for a whole variety of reasons. You can usually tell which ones have been financed. They usually have some kind of agenda, and it's 'all over the map'. It's many different things.

Suddenly, the bookstore across the street from Penn Station has this huge table with a large display, which is bigger than normal. It is the largest one that I'd ever seen in that bookstore. I walked by that bookstore many, many times when I was on Wall Street. It's has a big display and a black hardback with unbelievably attractive gold lettering. It's like a neon sign from across the street, and the name of the book is *Gideon*.

I thought, "Oh my God! I'll fall for this one." So, I acquired a copy of the book. I came back and stayed up late reading it. I swear to you that somebody had taken thousands of pages of my emails from when I was dealing with everything.

The name of my beautiful little mansion in Washington was Frasier Court.

So, they took thousands of my Frasier Court emails, and it was by two authors who were cowriters. It was clear from the descriptions that they were two people who had never met until the contract hit. So, it seems as though they gave them a plot and all those emails and said, “Write a book.”

I found thousands and thousands of references to my life and travels during that period. It was so weird, but it said that somebody was collecting every email, and poor souls are having to read it.

**Books.** Cathy O’Neil’s *Weapons of Math Destruction* gives you a great sense of the dangers of AI and algorithm and the nuts and bolts behind the move to technocracy. It’s really an exceptional book.

*1996* by Gloria Naylor: Gloria Naylor was a very famous and accomplished author. She wrote one of my favorite books, *The Women of Brewster Place*. Then in 1996, she was targeted at the same time that I was. So, I was dealing with electromagnetic weaponry, and she was dealing with it much worse than I was. They were using the technology that is very aggressive and inserted alien thoughts into your mind. I’ve had it happen to me, but nothing like what she dealt with. She wrote a book about it called *1996* and was very brave in telling the story.

One thing to understand is that in the early 1990’s the Department of Defense and the Department of Justice created a Memorandum of Understanding on why the Department of Justice agreed to prototype the use of nonlethal weapons for domestic use.

My guess is that was the authority they used to use that on me, and that was what they used on Gloria Naylor. Part of this was that they were prototyping, but were prototyping on people who they want to stop their influence because you stop being a leader and start trying to just maintain your coherence.

Another good book is one that Dr. John Hall wrote, *A New Breed*. One of his girlfriends was targeted by organized crime in a satellite op. One thing that I discovered as I did more and more research during the litigation is that much of this technology is not only used by the government. You also have the real estate industry trying to get tenants out, and you have organized crime stalking people for fun, and they do gang rapes. There is a wide variety of people who take this technology and use it.

Obviously, the organized crime doesn't necessarily have the access, but remember that a lot of those gangs are linked into working for the intelligence agencies in a variety of capacities, including in marketing the narcotics. But they are also very useful for, what is called, COINTELPRO stopping political activism.

It's a much better look for the government if local organized crime is driving you into an early grave as opposed to some government FBI person.

Tim Wu, a professor at Columbia University, wrote *The Master Switch* that shows the history of how IT and communication systems are used progressively to centralize power, and I think it's very good.

I wrote a review, and you can find it in The Solari Report library. Mark Rich was a young man targeted, and then he decided to write a series of books and really dig out all the technology. They are history books. One is *The Hidden Evil*, one is *New World War*, and one is *Geoengineering*. He really dives into the nuts and bolts of all the different technology. It's a bit of a gruesome read, as is the Dr. John Hall book, but it is very useful.

Then, of course, Katherine Albrecht's *Spychips*. You can listen to my interview with her, read her book, or both. Then there is *Black Money* by Michael Thomas. It's beach fiction – very light reading. It's a fictional version of the Promis software story, and it is really powerful because it gives you an incredible sense of the extent to which these systems have compromised the financial system.

Let me describe some **Interviews or Websites**: Dr. Rauni Kilde was a Finnish health officer who did incredible disclosure and transparency around what is happening with the compromise, not only of people's communication systems, but mines through the communication systems and the use of these systems as weapons. You can find several of her interviews on The Solari Report.

There is a website that I always recommend and Bill Binney is a part of it. It's called [www.BiggerThanSnowden.com](http://www.BiggerThanSnowden.com), and it's about the use of these systems. It's a collection of whistleblowers who have really done a lot to bring transparency to the use of these systems as a weapon or mechanism of control, and it includes Bill Binney, Dr. John Hall, and some other really great people. We will talk more about this when I get to **'Mind Control'**.

Truthstream has done such great things on mind control, and I think they are one of the finest sources. To do that, of course, they have gotten into what is going on with the phone and cell tower systems. So, they look at hardware in addition to the compromise of your software. By ‘software’ I mean your ‘big brain’.

**Articles.** Two of the articles that I am going to refer to in this discussion are my recommendation that subscribers do not use AT&T as a phone or internet provider. AT&T blocked the Solari Report for 15 months. They just released that block, but we continue to make that recommendation to subscribers. Anybody who would prevent you from receiving what you’ve asked to receive and paid to receive and not warn you or tell you nor respond to many communications over that 15-month period is not somebody whom you want to pay to provide communication services.

Then there is an article on Marsha Blackburn’s campaign. Marsha Blackburn was my Congressman (she prefers to be referred this way), and now my Senator, and she has been instrumental in helping AT&T build an extraordinary monopoly in the country and in Tennessee. It’s quite extraordinary because we are paying above market for communication services to finance our destruction and it’s very irritating.

Unfortunately, I wrote the article to be critical of her run for Senator. As things turned out, even I voted for her because no matter how irritated I am with her for making the world safe from AT&T’s harvest, I’m even more afraid of Chuck Schumer.

I also have an article, *Data Beast*, which at this point is relatively old. But it was clear to me in the 1990's that they were building the equivalent of a data beast and sucking up all sorts of data. It's not so much the government but the private contractors.

If you study the history of Bill Binney, he wanted to build a system where you didn't collect and record and keep everything. Of course, that is not what the contractors wanted. It had nothing to do with the NSA; it had to do with the New World Order data beast.

**Communication systems** – we are all dependent on them for phone, internet, Wi-Fi, TV, couriers, and mail. They are not all digital, and they are not all invisible. The post office is clearly very basic; we can all see it, and we have used it for centuries.

We pay an extraordinary amount of money. If you look at how much money you pay to make sure that all these systems are available and you can use them, it's a large amount of money – including our tax dollars if you look at the money we pay to regulate them or oversee them. You are paying a lot of money for these. Unfortunately, what we are doing with our tax dollars and consumer purchases is financing the buildout of a highly expensive surveillance system that is being used to steadily reduce our economic and political power.

So, we are financing the equivalent of converting our home and our community to *The Truman Show*. If you haven't seen that movie with Jim Carey, I recommend it.

These systems give the people who own the systems or the governments open access to them through a variety of back doors or the contractors who run the government systems. I think these are being built by taxpayer dollars funding the contractors.

This gives them complete 24/7 access to our intimate lives and data, including on a real-time basis and it's quite shocking.

The reason I invested such an extraordinary amount of money and time in the 1990's was to encourage people to build community databanks and place-based financial statements, and use GIS software to help them understand how it connected to the natural and living world, and I wanted to rebalance this balance of power that the system gives on a very centralized basis. That intelligence centralizes power. If you decentralize the intelligence, you decentralize the power. That is why the establishment has gone to incredibly drastic lengths to kill that transparency.

It's not only the people at the top; it's the local people. Everybody is fighting for the data like cigarettes in a prison. I think the establishment has wanted to make sure they got that before the new mind control systems get operational. As the mind control systems get more and more invasive and operational, we will see if they feel less threatened so they don't have to spend as much money trying to stop people from bringing transparency as they did then.

Glen Greenwald called this system the 'one-way mirror' and I think that is a great description for it. The managers can watch, hear, —

and read everything that you and I are doing, saying, and writing no matter where we are – anywhere on the planet. They can even map our thoughts or insert thoughts into our minds. They can change our mood, and they can make us desire things that we normally would never desire. If you look at online sales, particularly for things like pornography and gambling, that is a big part of it.

This is a surveillance system, but first and foremost, it's a harvesting system.

There is a new book that I am going to review on The Solari Report called *Surveillance Capitalism*, and that is exactly what it is. They are making more money off the data than whatever service you signed up for to give them access. They want to steal your ideas. Intellectual capital is a huge theft.

It's so odd to watch the Trump Administration attack the Chinese for this when, in fact, when you look at the entire US establishment, they are stealing everybody's intellectual capital. It 'takes one to know one'.

They manipulate your contacts, and they steal your clients and employees. Don't think that this isn't how big business is moving in on little business, and it's about to get much worse.

All that regulation makes little businesses produce far more data for the census, far more data for the regulators, and far more data for the healthcare officials. They are using all that data to steal your clients and your business and your sales – everything.

They use your data to sour relationships, bollix your civic and political activities or steer them. They steer your donations, your votes-you name it. It's quite extraordinary what can be done with these systems.

They also use it to interfere with your email and your mail and your phones and your courier services to manipulate your presence and interaction on social media. I never got on Facebook. Finally, I was pressured by a group of subscribers who said, "You have to be on Facebook."

So I got on Facebook, and we quickly started rising. We hit 1,600 friends on Facebook, and then we were hacked and everybody received nasty emails. I said, "I'm not doing that. I'm not going to create a honey trap so that people can hack our audience." So, I went off Facebook, and wasn't that a timesaver!

You can find yourself in a communication and IT nightmare if you were making money for yourself and not the system, or if the system has decided that it can make more money from your sickness or death, or they are trying to compete away your income and assets. They might not like your opinions, and they don't want them to be influential publicly or in the general field.

That is how you create shadow work. You drive somebody's communication system expenses way up and the performance way down in a way that makes it much harder for them to do whatever it is that they are accomplishing.

One of the tenets of the law and common law is that a man's home is his castle. Part of the communication system move is to convert our homes from that place of refuge and safety and to insert digital technology in a way that literally converts our home to a surveillance, consumption, and harvesting production model. It's essentially a place of liquidation for many, many people.

Obviously, if you are playing the game and making money for the system, you may have a 'get out of jail free' card, and your systems may work beautifully and wonderfully, and then you don't understand what everybody is screaming about.

At the root of this process is the swing and balance of power converting an individual from a sovereign human being to essentially a natural resource – like an oil or gas deposit. Patrick Wood and I talked about this in the technocracy discussion.

My journey in exploring and understanding this surveillance capitalism model started in Washington. In 1998 it was clear from what I was dealing with in the litigation that they were doing surveillance on me and they were listening to my phone calls. I understood all of that, but then an insider came to me. It was somebody who I thought knew what they were talking about. They said that the CIA and the Department of Justice had installed video cameras in my house.

That one set me back, and to this day, I don't know if it was true or not, but I had to contemplate that it might be. So, what do you do when you have invisible cameras all over the house? It's as if you are in *The Truman Show* and they can watch you take a bath, and they can watch you go to the bathroom, and they can watch you do everything that you do.

What do you think about that?

It was really interesting and I was stumped about, “How am I going to deal with this?” Remember that I was very rich and very successful, and I couldn’t understand how they were doing this to a person like me.

I went to church, and the co-pastor who worked up a ‘head of steam’ in talking about something very different from this, “You are worried about what other people think of you. What you need to understand is that God and you see everything that you do, and you need to worry about that.”

It was like a lightbulb went off in my head. I said, “You know, that is all that I need to worry about. If I just worry about that, I don’t need to worry about all of this other stuff.”

In fact, the less I think about it, the better off I am. I just ignore these people. I don’t control them. They are going to do what they are going to do, but I have ‘places to go and things to do’, and I am going to stay focused on remaining coherent and getting done what I need to do.

I do need to worry about the fact that God and I see everything that I do, and I need to face the fact that there is enormous room for improvement according to what God and I think. So, that is what I need to worry about.

Of course, what I found, and what you are going to hear me say many, many times during this discussion is:

It's a lot easier if you only associate with people and institutions that have integrity. Every time that I make an exception to that rule, I get a bitter lesson on why I made the rule in the first place.

I keep going back to integrity because I find that message is not getting through to my subscribers. I just had a 'big go-around' with somebody who is still banking at one of the worst banks in the world, which has a clear record of criminality.

I kept saying, "Why do you think you're safe?"

He said, "It's convenient."

I was thinking, "Are you out of your mind? Would you bring a serial killer into your apartment? I don't think so." I don't know why we keep doing it.

The fog of infowars got everybody thinking that it was 50 years ago and they don't have to worry about 'due diligencing' everything and everybody because the Federal credit is going to bail us out. Well, times have changed; they won't. The Federal credit is not going to bail us out.

I watched one of my banks in Washington steal from the company illegally, give confidential information to people who were trying to falsely frame me, and engage in a RICO conspiracy to steal our tax refunds and auction proceeds; I watched it all unfold. It appeared as though it all depended on somebody giving them access to information on our phone systems. They were clearly collaborating – whether it was AT&T or NSA or an NSA contractor or all three. I have no way to know.

I do know that AT&T was thoroughly embroiled in the story, but one of the things that I learned is that banks steal. I have an abundance of corroboration because I have attorneys tell me stories of what they are dealing with on behalf of clients. They often steal with approval from ‘on high’. So, you need to care about who your bankers are.

Your bankers sit on, not just your money, but invaluable data about you, and data that can be used to kill you and your family – particularly if false data is inserted into the record; ‘literally’.

It reminds me of my favorite quote from Nicholas Negroponte, “In a digital age, data about money is worth more than money.” That is why you have to do business, particularly with money, with people that have integrity.

When I first arrived in Hickory Valley in 2000, I still had ten more years of litigation through 2006, and then related tax challenges through 2010 necessary to shut Hamilton Securities down and merge it into Solari, Inc.

One of the companies that I was hoping to avoid when I got here was AT&T, who, in my opinion, is one of the most unethical companies in the world if my personal experience is representative. You will read a lot when you study the history of NSA. Many complaints about the behavior and involvement of AT&T surface, and sometimes you wonder if NSA is reporting to AT&T or vice-versa. What is the real relationship there?

As president of Hamilton Securities, I had hired AT&T in several capacities: One was to provide integrated telephony and computer systems. We had a very advanced system that integrated the two. Then I hired AT&T Bell Laboratory to provide optimization technology for the mortgage loan sales.

We also had a relationship with the people who ran Strategic Planning for a small group inside the AT&T chairman's office. They would come to Washington once a month, and we would teach them about money and they would teach us about technology and information systems. So, we had plenty of relationships with AT&T at Hamilton. Given what I've learned about AT&T since that time, hiring them was a decision that I regret.

The team that did the work on the loan sales was initially a wonderful group of people, but as time went by, I came to believe that someone in AT&T had, not only sabotaged them, but us as well, and it was probably intentional. That is a much longer story.

As a telecommunications customer, after Hamilton Securities I kept bumping into AT&T as a long-distance provider. They have a near-monopoly position in many places, and I believe that they were padding the bills and overcharging. I have no idea if they were specifically targeting me or if they were doing it to many people, particularly outsiders or everyone. Let's face it: The insiders are making so much money that they don't really mind the skim and often don't really notice it.

When I arrived in Hickory Valley, AT&T had attempted to block my Bell South service over disagreements because I kept calling them out on, what I considered to be, fraudulent practices on the billing or just mistakes on the billing. It was very interesting that they tried to shut me off long-distance.

Thanks to very courageous intervention from Bell South, which in my experience was an exceptionally well-run company, AT&T was unsuccessful, but it was a very time-consuming fight, and it reminded me that sometimes fighting over dimes, nickels, and pennies is as instructive of how the system works as fighting over trillions.

AT&T, unfortunately, subsequently acquired Bell South, but it was by observing the AT&T systems then and now that I realized plenty about the system. One thing had to do with the cell tower.

In 2000 I had a reader; The Solari Report didn't offer subscriptions then, but I had a reader who was a cell tower manager and used to email me. There was tremendous pressure from the telco companies to get cell towers up quickly, and it was clear that there was some type of top-down political agenda. It was tremendous pressure, and towers were going up all along Interstate 40.

When I would go to Washington for the litigation, I would drive from the Western part of Tennessee near the Mississippi River nine hours across the state, and then into Virginia. So, cell towers were flying up across Interstate 40, but AT&T phones wouldn't work on Interstate 40. That is what clued me into the fact that whatever was occurring, there were more agendas here than phone service.

In August 2001, the project manager for the cell tower company called me and said, “We have all been laid off. It’s done.”

I said, “Uh-oh! Something big is about to happen.”

Well, you know what that something was? What happened in September 2001?

Where AT&T had clearly a growing monopoly, AT&T bought Bell South. If there were any anti-trust laws in America, that couldn’t have happened. Interestingly enough, after it did happen, I flew from Memphis. I forget where I was going, but it was somewhere in the United States. The man next to me worked for Bell South. He regaled me the entire time on the plane about what a criminal enterprise AT&T was and how they padded bills and skimmed money and falsely charged people for long distance, and he was going to get out. It was rather funny.

Through that experience, I became convinced that the cell tower network was designed primarily for surveillance and mind control, and the EMF radiation – and even weaponizing it for health purposes – could be in the play. If you look at what can be done with EMF radiation and the global spraying and the combination, I was very, very suspicious. When a cell tower was erected behind me in Hickory Valley, I really felt like someone had put a weapon there because I think that it is a weapon – whether it’s only surveillance or control of whom you can communicate with and how.

When I first got to Hickory Valley, as this was happening, I was absolutely convinced that life expectancies were falling. We now see the statistics, and it's clear. However, you could see it in Hickory Valley, and you could see it as I drove across the country. Immune systems were steadily weakening, and toxicity levels were steadily rising.

We talked about this under 'Health', and yet everybody was dying from what their unique weakness was. Nobody associated this with an epidemic. I believe it was an epidemic, and it was an epidemic of lower immune systems and rising toxicity, whether it's the EMF or the spraying or the GMOs and the pesticides. In whatever way you want to describe 'environmental pollution', it was an environmental pollution epidemic.

I was convinced the cell tower network and the related surveillance were playing a very integral role in managing the silent epidemic and making sure that people didn't understand that it was centralized and an effort that was understood by the leadership.

In 2006, one of my neighbors was rumored to be negotiating a deal with a cell tower company to put a cell tower directly into Hickory Valley. I was very upset about it because I was apprehensive about the health consequences and the surveillance consequences. So I prayed, and I decided that rather than fight it, I would buy a gazebo for the town commons. My thought was, "Don't yell at people for destroying their town to make money; show them that what you do is build your town up. You don't liquidate your town to make money for yourself."

There is no doubt about it. In a little Southern charming country town, you put up a big cell tower, and it looks like a prison Gulag – particularly at night. It's very ugly.

I bought the gazebo, and a week after we installed it and had a little installation ceremony, it was announced that due to the financial crisis, the plans for the cell tower were cancelled. Remarkable coincidence! I was very impressed.

In fact, one person told me that she believed that the gazebo gave the angels a place to hang out in Hickory Valley. Don't laugh; it felt like that.

So as time went by, we moved through the bailouts. Clearly, the pressure to get increased surveillance here was on for a variety of reasons, which I won't describe, but they were coming from multiple directions.

Suddenly, an effort began by a group of private developers to persuade the town council in Hickory Valley that we should put a cell tower on top of city hall and create a learning center for the youths at city hall. It was to be funded with an Obama Administration rural grant and was a push by the Administration. The Federal government would give the money to private companies if they put up the cell towers and learning centers, and the learning centers were to be operated by staff hired and managed by the developers – not the town. All of our children would go to this central place on centralized computers on their systems under the supervision of staff that private developers funded through the Obama Administration.

I'll be perfectly blunt. In the worst case, networks like these are used to basically survey and harvest the children in your place so that the smart ones get picked out and groomed to get scholarships to the ivy league. Particularly physical ones get targeted and recruited into the special forces in the army, and the pretty ones may get targeted and recruited for pedophilia, and they could even get kidnapped. A particularly violent one could be picked as a school shooter.

You are talking about giving people access to the children so they can underwrite, review, and figure out how to use them to make the most money for themselves. At the same time, I am in the process of driving around the country, and all over the country I was hearing about children missing. It was astonishing.

I'll never forget driving into a local 7-11/gas station type of place. As I walked in and went up to the register to pay, there is this huge glass jar with a picture of a child on the front saying 'missing' and people are putting donations in. They are inviting donations so that the parent can look for the child because most of these people are operating on fumes and need money if they are going to try to find the child.

A woman came in behind me and said to the woman behind the register, "Oh, no. Not another one!"

It's happens once a week and the woman said, "Yup! Another one."

The first woman said, "You know, they'll never find her."

So, I really started researching what was happening with the missing children phenomena, and I figured out somethings – and I looked heavily into the kid Finders Network.

When I did the interview with Jon Rappoport on pedophilia; there is a movie that a wonderful Solari Report subscriber made about the Finders Network. She made it accessible to us, and you can watch it at Solari.com. Just do a search for that Solari Report with Jon Rappoport.

At that time, I was researching the Finders Network and similar networks. Throughout America there are private runways where people land the jets, auction off the children who have been kidnapped, and could get about \$50,000 per child for an 8 or 10-year-old blond, blue-eyed boy or girl at that time. If you laundered the money through a publicly-traded company, they could get the stock up quite a bit.

It was absolutely happening, and there was no way that I was going to let a bunch of private people come into Hickory Valley and basically poach our children. So, it fell on me to go to the town council and stop it. It was quite a scene between the development team and myself. We both were aware that I knew all these things, and we both knew that I was going to describe all those things, and I was going to get into the really graphic part of this if they pushed me.

It was interesting that they backed down, and then they said that the town could hire and manage the person who was running the center. Given what was going on with the systems, I knew that wasn't good enough. There is no way that you want those youths in a centralized location.

I went to the mat, and as I said, I never had to go to full disclosure – although I was certainly prepared to, and I think that they were very scared that I was going to.

I was lucky that the town council turned it down. I think that at the end of the day, one or two people in the town council knew the unspoken danger and knew to get it stopped.

My cousin was on the town council and she voted against it, but the cell tower people were clever. They came back and offered her a private deal on her property, and, of course, not only did she say yes, but she used her formidable political skills to get it approved.

What was interesting was that she went way out of her way to make sure that I didn't find out about it until the approvals were all done. I found out about it from the developers. One of them called, since I'm a member of the Chamber of Commerce, to basically 'crow'. It was a, "Nah, na, na, nah. We got it done anyway by buying your cousin." That was the implication of what they said.

My cousin started to cover her tracks and saying things about me around Hickory Valley that weren't true. The best defense is always a good offense. Then in the middle of this, she came to my house. I was contemplating what to do. In situations like this, I like not to jump to conclusions as to what the action is, but really think about it.

It was interesting. She looked at me, and said, "You're never going to speak to me again, are you?"

That meant that if she was in my shoes, she would never speak to me again. In fact, I realized, “Oh, okay. That’s a pretty good idea.” So that’s what I did. I stopped communicating with her, and she ensured at that point, her grandchildren would not speak to me either.

It was interesting that it was my love for those children that was a big part of the reason I had stayed in Hickory Valley. So, whoever wanted that cell tower and wanted to do the surveillance here, they were able to cut through my family and destroy those relationships.

What I would say is that you can’t destroy something that is real in that way. To a certain extent, it shows the weaknesses in reality.

One of my favorite quotes that I used all of the time in litigation was from *A Course in Miracles*, “Nothing real can be destroyed. Nothing unreal is real.” That was one of those times.

Scripture says, “Guard your heart, for from it flows the wellsprings of life.” That was one of those moments where the question was: Could I feel the pain of losing my relationship with those children? Can you have your heart broken but not break your heart?

When you deal with the war over these systems, that is going to happen. It tears families, it tears spouses, it tears people, and it tears friends apart. You are up against a very demonic system that has 24/7 access to all information and is a master at figuring out how to play people against each other.

The reason I don't speak with my cousin is not because I'm angry at her for doing that; the reason I don't speak with her is risk management. I'm responsible to meet a payroll; I'm responsible for numerous obligations to subscribers and clients. I cannot afford to have people in my life who lack integrity to that extent. Bringing them in puts me at risk of not being able to deliver on my commitments. It's only that simple. I can't do what I do and have people like that in my life; it's the way it is.

I have people locally who have stolen from me or who have been involved in poisoning me, and they are a risk. I cannot afford to let any of those people into my life.

At that time, I made a command decision to leave Hickory Valley, and I discovered in the process of trying to find a new base camp and set it up and move, was that I could only avoid cell towers at fantastic expense if I wanted a home base in America. There are other places to go, but I continue to want a home base in America.

Instead, after much researching and searching, I shifted to doing everything to simply protect myself in Hickory Valley from the digital home invasion. But wait, it got worse!

Let me mention a couple of things that happened in that period. After settling the litigation, I started to work with a very talented webmaster. My first project with him was doing the *Dillon Read & the Aristocracy of Stock Profits*, and I invited him to come to Hickory Valley. I rented a small house for him in Hickory Valley, and he came here.

One Sunday night we were working very late – thank God! One of the local drug gangs did a series of multiple home and business break-ins on a Sunday night. One was the house that I had rented for the webmaster, and the other house – interestingly enough – was, if you go to Google maps and put in my home address, you don't get my home; you get the house that is between Highway 18 and where my house is. So, if you are driving on Highway 18, and take a straight line to my house, you don't see my house; you see this other house. That was the other house that was broken into.

To this day, I wonder to what extent the kids in the gang looked up my address and instead, got the house on Highway 18 and went to the wrong house. It was unfortunate because the woman who was attacked when they invaded that house had her wrist broken and went into decline after that. She never felt safe there, and then she died. I truly believe that her life was dramatically shortened by that home invasion.

I was lucky that the webmaster didn't decide to get scared and quit; he stayed. But I believe that was an op directed and organized through the smartphones. If you look at the extent to which local gangs are part of the drug networks that ultimately flow back to the intelligence and enforcement agencies, you will find that there are very few degrees of separation, particularly now with communications and smartphone technology.

I know now never to look something up on the internet on my smartphone and then use Google Maps to get the directions. I know not to do that. But last year I was being lazy, I was tired, and I had a lot of errands to run. I had just gone to Apple and picked up a new desktop computer. I needed to go to a retail store that I rarely go to.

I was tired, and looked up the directions on the browser. Then I clicked and let Google Maps see where I was. Sure enough, when I arrived at the store, there was, what I call, an ‘organized crime stringer’ there.

I took one look and said to myself, “Your fault. You used Google Maps. You should know better.”

If you inspect my car, you will see this huge trucker’s map book in it. It has all the maps of the 50 states with plexiglass plastic on top of it. All the truckers use it and you can get it at any truck stop. I try to never depend on GIS software, and if I do, I certainly never use Google.

I was smart and didn’t go into the store. I had the Apple desktop computer in the back of my car, and I knew that if I went in and did my errand, that desktop was not going to be in my car when I returned.

It reminds me of the time that they stole the Saker’s book from my car when I was in Kruger’s. I’ll tell that story when we get to covert ops and it is a hysterical story.

What you need to know is that using the communication systems – digital systems and the intelligence networks – they have been running organized crime since the beginning and in partnership with the secret societies, but the management is very connected and very tight. If you have a problem with the local drug gangs, you need to understand that they are a local distributor for US intelligence and enforcement agencies. The way that I always say it is: The drug dealers work for Tony Soprano who is financing James Bond, which means that James Bond can turn on a world of low-level gangs and stringers at your expense, and the smartphones make it so much easier and more creative.

It's amazing what can be done.

As soon as the cell tower got installed behind my house, Hickory Valley was moved to the front of the delivery schedule for smart meters. What an amazing coincidence! It was astonishing!

I took one look at it, and my question was: Did Warren Buffett personally insist on this cell tower and smart meter? Maybe. There are many Warren Buffett threads in this story. Perhaps someday I will tell those.

Bolivar Electric showed up at my door saying that they were there to install a smart meter. I said to them with perfect confidence, "No, you're not putting it here. I'm part of the opt-out program," knowing full well that Bolivar Electric didn't have an opt-out program.

I went to Portugal on a business trip not that long afterwards, and I left my car parked in front of the meter. Bolivar Electric showed up and told my assistant that she either had to move it and let them install this smart meter, or they would shut off my electricity.

I assume that the presence of a smart meter increases the odds of fire or being hit by a tornado or lightning, and that is one of the reasons I have a mortgage and maintain full house and life insurance. We have an amazing disaster recovery kit, and part of it I keep in the car.

I recently bought a new stove and it has no digital anything on it. There is still one manufacturer who makes zero digital mechanical stoves. That is why I have a refrigerator that is decades old.

You wouldn't believe how old my refrigerator is. I keep painting it and doing things to try to save it because it's all mechanical and not digital. I try to keep as much of the equipment in my house simple and without digital as much as possible.

If you haven't checked out the Lehman's catalog, they are a store that serves the Amish, providing non-electrical goods. I recommend it to you, particularly because the cost of electricity is likely to continue to go up, up, up. So, go simple; the less data being sucked up about you, the better.

It was during this period that they introduced the big flat screen TVs. There is a great article that I keep promoting on The Solari Report by an attorney who removed the instructions as he was taking his new Samsung flat screen TV out of the box. He read the terms and conditions, and was astonished to read the fact that he was giving them permission to basically view him, and that this was a two-way instrument. It's quite funny.

I think that all screens are. That is why I have these little electronic Freedom Foundation stickers over the cameras on my screen.

Let's turn to the **post office and courier**. This is not just a problem of digital systems. I would say that for many years, one out of ten checks that we mailed to our bank would disappear, and then it became one out of 20 checks when the litigation was over. Now we send everything with tracking. We can also deposit electronically, which makes it safer.

I will tell you that if it's important, we have to send it with tracking; we can't depend on the mail to get it there.

When I first moved to Hickory Valley, I had been writing articles about Pug Winokur who was a board member at Harvard. His investment company managed money alongside of Harvard, so I'm assuming that Harvard was investing with Pug, and Pug was investing in various companies for them – including companies they didn't want associated directly with the Harvard name, which included DynCorp.

DynCorp has for a long, long time been the lead contractor at the State Department and is a military contractor. They were the contractor made famous by the fact that they were engaged in very significant sex slave trafficking in connection with several contracts in Europe.

I helped the reporter write this story. It was a cover story in *Insight Magazine* about sex slave trafficking by DynCorp. I made sure that it got emailed to all the heads of all the IT agencies.

In the middle of that, who should show up getting the contract to sort the mail in Memphis? DynCorp. The data beast is everywhere. I did huge Unanswered Questions on DynCorp. Is it connected to all of my problems with the mail? I leave that for you to guess. You never know. These things are mysteries.

When you have to mail through a sorting facility run by somebody who is intimately connected; DynCorp is a big, big contractor at the HUD IG and at the Department of Defense. Pug Winokur was chairman of the Finance Committee of Enron at the same time that he was chairman and lead investor at DynCorp. DynCorp was running many information systems at the Department of Justice and SEC. So, if you are talking about information systems where the money is going missing and related enforcement:

One of my great lines during the Enron debacle was, “If the Department of Justice had not asserted control of Enron’s documents, but the Enron investors had asserted control of the SEC and Department of Justice’s systems related to the enforcement of Enron.” It’s quite interesting.

DynCorp is being paid with our tax dollars. One of the hard things about the post office is that we are paying for the services, whether it’s through our purchases at the post office or our funding of tax dollars, and yet we are funding the people who are sabotaging our mail.

One of my favorite stories – and this is on courier services – goes back to 2015. In January 2016, I had just finished *Space: Here We Go*, our 2015 Wrap Up. I went to Rhode Island to work with our Wrap Up editor, and I was on the 26<sup>th</sup> floor of a large hotel in Providence, Rhode Island.

We had been working for weeks to figure out what we wanted to say and how we wanted to say it, pulling all the different sections together. I was unbelievably proud of it. I really felt like I had figured it out. I had a very important story to tell, including my belief that I had concluded that our decision to globalize in the 1990’s really reflected a decision to become a multi-planetary civilization as quickly as possible, and you needed the capacity of Asia to do that. That was part of the decision that made the process of globalization much more logical to me.

My editor left, and I sat down to record the presentation and was really excited. I really felt like I had something wonderful to share with my subscribers, and I just wanted to sit down and tell them all about it.

So I started, and I was into about the third or fourth sentence. Suddenly, I heard a noise outside the window – immediately outside the window- it was right there. It was the strangest noise I’ve ever heard. It ‘chilled me to the bone’, and believe me, I don’t scare easily. I was frozen because it was so other-worldly.

I had to do it. I took a deep breath, I prayed for strength, and I drew back the curtain, and there was absolutely nothing there. I couldn’t believe it. I thought, “This is even stranger.”

I closed the curtains, and sat down to start recording. I started recording again, and I said, “Something is wrong.”

I stopped, and went back and realized that I sounded ‘freaked’. I had gone from really positive and happy and sounding great to sounding like I was facing death or something. So I said, “I can’t do that.”

I stopped and took a long, long break. Then I came back and recorded again.

We had finished the web presentation, collected it all and sent it to our graphic artist in Pasadena, and he finished it. We went back and forth, and got the final PDF for the complete Wrap Up in perfect shape. I said, “I approve, take it to the printer. Let’s go.”

So he called me back and said, “You’re not going to believe what happened.”

I said, “What happened?”

He said, “The printing machine at the printer shut down, and nobody can figure out what is wrong with it.”

I said, “You’re kidding!”

He said, “No. It won’t work, and nobody knows why. So, Xerox is going to send a technician and he is going to fly out.”

The technician flies out, and can’t determine what is wrong with it. So now they are going to have to swap it and send in a new printer and we are on hold for a week or two. This is becoming unbearable because now we are late, late, late!

Finally, the new printer arrives, they print *Space: Here We Go*, and, because I need to get some copies to some people really quickly, I asked the graphic designer to send 50 copies to me by FedEx, so he sends 50 copies to me by FedEx.

Nineteen days later, the box arrives back in Pasadena with 34 books gone. So, you wonder who the 34 people are on the list to get the books. He called me and said, “You don’t understand. This can’t happen.”

I said, “Yeah, just like the printer can’t happen, and the books can’t happen, but it did happen because you’re in the Solari world now. You’re not in the Disney world; you’re in the Solari world now.” Because of this, he shipped the other books by another courier service, and the tracking showed that they had them and they had arrived in their facility in Jackson, Tennessee, ——

but they didn't show up. So finally, we called them and they said, "Yes, we have them here. We have the pallet, but we can't deliver them because of snow."

There was no snow on the ground; there was no snow in the air; there was no snow. I said, "What do you mean that you can't deliver them because of snow?"

I put my chief of operations to the task. I said, "Just drive there and take them. Just get them."

So, she drove all the way to their warehouse, and they refused to give them to her. She said, "There is no snow, and they are ours. You can't refuse to give them to us." She literally had to threaten to call the sheriff so that we could get them out.

FedEx and another very famous, well-known courier service: You decide. It delayed the book mailings by more than a month. There was incredible shadow work involved and it was very time-consuming. I'm always telling people that 20% of my budget is just shadow work related to these kinds of spiritual warfare games.

So that's **mail and courier service** and now let's turn to **phones**. I started Solari Investment Advisory Services in 2007. I had a local phone company providing our phone services, but unfortunately they went across an AT&T trunk line. I had constant clicks and disconnects and hang-ups. Finally, I couldn't take it anymore. I paid a fortune for a T-1 line. That still didn't solve the problem.

We got a bit higher speed on the internet, but you can't imagine what it's like to do individual investment advisory when you have a full-time war on the telephones with the telephones clicking and disconnecting.

It was peculiar because one of the problems would be that people assumed, "Oh, this is happening because you're a political target." What I had to explain to them over and over again is that with the 325 million people in America, they are recording every phone conversation, and everyone is targeted. So, you have to stop worrying about somehow I am going to put you on a list because there are 325 million people on the list.

Some of this could have been not related to me. Some of this could just be the rural areas. Clearly, there is a push to get everybody into the cities, and the rural area service has been targeted to diminish the infrastructure.

All of this gave me a platform to talk with the clients and the subscribers about what you will see if you watch *A Good American* with Bill Binney. He does a great job of explaining the 24/7 surveillance with software and AI. It's the software and AI equivalent of what you see in *The Lives of Others*; that great movie.

Again and again you will find that Americans really have a challenge understanding the extent to which their phone privacy and internet privacy and any communication system's privacy has been completely compromised.

If you watch the school scandal of the parents who are now having to settle and have been indicted on their engaging in a felony to get their children in college, , particularly after Snowden, you think, ——

“Why would you engage in felonies on a phone where you know that the NSA is recording everything you say?” They are recording every conversation into the database.

There is a TV series called *The Good Fight* and I think it's on HBO. It is a story based around a woman who is an attorney. She hates Trump, and works in a law firm in Chicago. A lot of it is the day-to-day funny things that go on in the law firm, but in the third season of *The Good Fight* there is a fantastic two or three episodes where she is part of a group of political activists who are being tracked by the NSA. You click back and forth between the political activists and the attorney meeting, and the folks at the NSA are listening to her, scanning her phone conversations, and sending things forward to be flagged. You see much more about the NSA system.

The thing to understand about all of this is that this material is being used to build control files. Many services are marketed or use the phone lines and internet; pornography, online gambling, selling some investments like private equity and numismatic precious metals, or finding opportunities to enforce.

Peter Thiel's company, Palantir, is a perfect example. Go to the Palantir website. They are building software to help enforcement agencies find something that will generate civil money penalties, seizures, and headlines. So, you have people building software for the government that can access all the data, in theory – if they have access to the data beast – all the information about your life 24/7, and find imperfections.

That is why when people say things over the phone like, “Bitcoin is private. I don’t have to pay taxes,”: Are they out of their mind? First of all, you do because there is no such thing as privacy with bitcoin. Secondly, why are you saying this on the phone? The phone is being recorded. What is it about what Snowden said that you don’t understand?

People don’t understand the fact that we are operating on the Truman Show. It’s rather astonishing to watch. No matter how many times you explain this, it doesn’t seem to get through the ‘fog of war’.

Satellites and drones are part of this system. Drones can be made to be birds or insects. One of the recent ‘war on terror’ movies had a drone that is an insect that is flying in and listening to conversations.

I had a drone that was a metal insect flown into my face very quickly and very hard at an event. We were outdoors, and the message was obvious. It was basically, “We don’t want you here. Don’t come back.”

I can assure you that I will never go back to that resort again. I understand in America if the boys say that they don’t want you there, they have the power to make it impossible for you to be there. So, I’m not going back.

I’ve discussed a great deal on The Solari Report about shadow work, but it’s very amazing to watch how software and AI can be used to create ‘digital cooties’ on your digital systems that eat up your time and make life very, very frustrating.

A subscriber sent me an email that I thought was a perfect example. He was clearly struggling with this kind of issue. He said:

“I recently composed a lengthy email to a friend on a controversial subject. When I went to attach a YouTube video, all of the relevant YouTube links were suddenly blocked as a certificate error.”

I get plenty of certificate error problems.

“I then tried to access some websites. The more controversial ones were blocked while more benign websites were available. I gave up on the link and sent the email, but it vanished.

When my computer was restarted, the certificate blocking issues disappeared, but the operating system clock – including the month, year, and time zone – had changed. I am using a Microsoft operating system”.

That is a big mistake.

“Other things that I have noticed in the past are links disappearing from my favorite folders, and iPhone Safari URL autofill not working for certain websites in the lead-up to the midterm election. Regarding the PC, presumably Microsoft uploaded software updates onto my computer, but there must be more to it than that. This cannot be the result of human intervention or even algorithms or AI.”

It's a combination of algorithms and AI in my opinion, but it's quite invasive. You can't use Microsoft, but a couple of times on a very temporary basis I've been stuck with Microsoft, and it's just a nightmare. So, you have to start the migration to open source software and to reliable email providers. That doesn't mean it's going to end all of it, but it will certainly lower the incident rate.

Remember that shadow work is trench warfare. We are going to need to use these communication systems, but do everything that we can do to migrate to open source software.

Our big problem is that we are financing this. As a customer, if I can put the money in the pocket of somebody in open source as opposed to Microsoft, I'm much better off. But so much of the financing is not just as a customer, but as a taxpayer, too.

Let me say a few words about my recommendation to subscribers that they not use AT&T. In September 2017, Dr. Skidmore published his study on the \$21 trillion of missing money. We went through a process of doing interviews publicly and publishing more material. Then in that December, in response, the US government started to proceed down the road of planning FASAB 56. DOD also announced that it was going to do an audit.

It has announced several times before that it was going to do an audit, and never finished it. But you could see with FASAB 56 that they were on the way to make the books secret.

In February I was in the Netherlands and on February 22<sup>nd</sup> I published a huge piece on pension funds. It was our 2017 Annual Wrap Up, *Pension Funds: Does Your Pension Fund Have a Deep State Drain?* Basically, it connected the \$5 trillion shortfall in US pensions to the \$21 trillion missing, as well as the \$24 to \$29 trillion of bailouts.

I said, “If we can give the bank \$24 to \$29 trillion dollars, if we can disappear \$21 trillion, what is the problem with fixing student loans and the pension funds?”

The next day, 20 minutes before my plane landed to return to the United States, the Solari website went down. It took us a month to bring it back up because we decided to make a command decision and bring up a new site.

At the same time, Google, Yahoo, and AT&T blocked our emails. We emailed all three of them directly. Google and Yahoo – there being no reason to block our emails because no one could produce any evidence as to why we deserved to be blocked – unblocked us. AT&T refused to respond. Thus, began a very steady period of trying to communicate with them.

One person heard about it on an internet interview that I gave at the time, and he had a team of people working with AT&T that provided websites; they build and run websites for people. So he sent me a new business promotion, and said, “I can solve your problem. I have a company at AT&T, and we will build you a new website, and you won’t have any of these problems.”

I said, “This was shades of WC Field. It’s AT&T who was blocking me.”

So he wrote back and said, “I checked our internal system, and we’re not blocking you; it’s not us.”

I said, “Well, there is a secret decoder blocking system that you don’t have access to because you are blocking us.”

It was rather funny. This went on for 15 months. A week or two ago we finally got an email from AT&T saying that they are unblocking us and our tests show that they have unblocked us. I continue to recommend that you don’t use AT&T.

So you signed up for a service, and are asking us to send you things, and they block you without informing you that they are blocking you? No one was informed. So, for them to take your money but then block you from things that you say you want – I don’t want to do business with a company that would do that.

I thoroughly recommend that you not use AT&T or any of their domains. With all the buying up of the baby Bells, they have a large number of domains.

The second article that I wrote relating to AT&T was about Marsha Blackburn’s campaign. I have two offices in Hickory Valley, and in the article I estimated that for internet and phone for those two offices, I pay approximately \$15,000 a year. One of the reasons I pay that much is because all the systems are untrustworthy, and so I need redundant systems. I have three different phone options at any given time because I don’t trust any of them.

If we had a real market economy, I estimate that I would be paying \$2,000 to \$5,000 for all those services, and they would be reliable so I wouldn't even need some of them. So, maybe I would be paying closer in the \$2,000 range.

One of the top investors in the world, Jeremy Grantham, said about the US stock market something to the effect, "I underestimated the ability of the establishment to generate and support monopolies."

If you look at what is happening with AT&T and the phone system in this country, it's Soviet. That is the only way that I can describe it. It relates to the fact that these systems are weapons and surveillance devices as much as they are communication devices.

When you look at the US governance system over the last 50-70 years, you see extraordinary changes coming as a result of these kinds of invisible methods of control, particularly with what was made possible by digital phone, internet, and cable systems, as well as through the manipulation of the post office and the courier systems doing it behind the scenes. I believe it was made much easier by the information and communication systems and the centralization.

It has shifted a lot of power out of the local people and out of the local secret societies and the local banks and churches and institutions. You have a power shift to the centers of government and finance through these systems.

If I had to write a history of the United States over the last 70 years, the title would be *How the Local Boys Got Rolled*, ———

and yet if you come to the local areas, all you see are the people who are running the local infrastructure, very desperate to win the treats of the tapeworm. They are not focused on how to get back into the game; they are focused on ‘sucking up’ to the tapeworm upwards.

At The Solari Report when we’ve talked about geopolitics, I’ve talked about the competition and cooperation between the Masons’, the Vatican Jesuits’, and the Zionists’ financial interest. When I was growing up in Philadelphia, basically to open the US to narcotics required the cooperation of all three groups. The Masons had primary control of the banks, the law firms, and the courts.

The Vatican controlled the mafia and the unions, so it was the Irish and the Catholics. They had the ports and the police. One of the great strengths of the Vatican is that they had a very large network of local churches and archdiocese that made them money. Everybody was tithing, so there was a flow of revenues increasing. With it came the confession booths, which were a great source of control files. You basically had local buildings with a confession booth that created control files, but they made money because people were tithing and donating.

What made it interesting was that all three – the Masons, the Vatican, and the Zionists – all cooperated on the mind control and pedophilia, which was a very economical way of building control files, in addition to the confession booths, and not unrelated. It was interesting when the NSA and the telecoms came along because you got a much cheaper, better way of getting control files with the phone and digital systems.

It completely supplanted the local ways of getting control files, including the confession booths.

The whole blame for the pedophilia story got hung entirely on the Vatican. The Masons, the Zionists, and the intelligence agencies totally skated and were able to push it back on the Vatican. When I try to understand what happened and how it looks to me, it seemed like, “We control the digital systems, and you don’t. We are able to put it back to you.”

As that scandal happened, the local churches emptied out, so it’s no longer a profitable source of tithes or revenues. If anything, it’s real estate that needs to be sold, otherwise it’s losing money.

The church really got power shifted on local control and the local control systems, but as I said, the local boys got rolled.

The digital systems have played a very, very important role in the equation of who controls the local economy. When you deal with anyone in business or government today, you need to understand that 325 million Americans have been recorded, and 325 million Americans have control files.

I just did an interview with the Saker where he described a survey that said 98% of American men have used pornography in the last six months. If you know how easy it is to get somebody watching pornography and watching pornography with an underage actor, ‘ba-boom’ – felony! ‘Ba-boom’ – control file! It’s remarkable how many people have either a leash or a potential leash that they haven’t gotten thrown in their face yet, but will when the time comes.

That brings up 5G, which is being rolled out. We talked a fair amount on The Solari Report about 5G. If you haven't listened to The Solari Report with Jason Bawden-Smith, I hope that you will. If you think that the communication power systems are controlling now, wait until you see what 5G can do in addition to serious issues about health and EMF radiation. This makes it much easier to do holograms and false flags.

The people who I know that live in the area where 5G has already been rolled out are really reporting that they feel like they are in a fog.

I had one wonderful ally say to me, "I'm just aging. I guess my mind is going."

I said, "Did this start at the beginning of December 2018?"

He said, "Yes. How did you know?"

I said, "Because that is when they rolled out 5G in your area."

Now I talk to him and I realize that his mind isn't slipping at all; he is having to grapple with 5G. But 5G makes the systems much more powerful, particularly to do things that sway people. That is part of mind control, which we will get into a little later.

We will also get into cyber security, which is a different tactical area. I want to talk about communication systems as surveillance systems, and we will get into it later with mind control as well.

Cyber security crosses the line into these systems as a battleground. I believe, given where we are, we ‘ain’t seen nothing yet’. I think it’s going to get a lot worse before it gets better.

Let me talk about some suggestions that I think can help, and I know that many of you know much more about this topic than I do, and you have great ideas and suggestions. I would really hope that you post them at the commentary because I think this is something that we are going to have to help each other get really intelligent about.

Learn to operate impeccably to deal with the fact that we live in a world where there is no privacy. You have to assume that you have no privacy, and you have to assume that in world where every day they make more and more laws and regulations that are more and more complicated, and where we are in a technocracy and entrapment, you need to operate impeccably. The way that I make it simple is: I only worry about what God and I think. That takes care of most things.

Second, really consider migrating all your software to open source software. During the litigation, I used only open source software, and now I want to get back to that. If I had a brand-new laptop with Microsoft during the litigation, its life expectancy would be one to three days.

I had a wonderful associate who used to be head of research at National Semiconductors and has a PhD from MIT; Court Skinner. He is a brilliant man who used to whip together second-hand parts and create these second-hand laptops. He would fill them up with open source software, and they could last 29 days.

I had a year where the hacking was so bad that I went through 13 laptops, but God love Court Skinner, because he kept me online. If it hadn't been for open source software, I couldn't have done it.

Leave your mobile phone in the car. Leave all your mobile devices in the car. Don't pay for a surveillance device and then carry it around in your intimate space. Just leave it in the car.

Use wires. I have a hard-wired landline and I have a hard-wired internet access. Don't have Wi-Fi. You don't want people to be able to come in on Wi-Fi. Remember, it's not just the government, but it's organized crime and all sorts of hackers. Don't let that into your house. I realize that your neighbors' can give people access to your house, but don't help. Don't let it hook up to devices in your house.

Get as many trees as possible between you and the local cell towers, particularly if they start putting up those 5G towers. Take as many steps as you can to understand what is going on with the EMF radiation around you. Don't rent or lease a place that has high EMF. I carry an EMF meter with me. If God forbid, I should rent a hotel room where the EMF is off the charts, I will ask to be moved to a different room. Be careful about your EMF radiation exposure because it really can destroy your ability to think, and it can kill you.

Keep your household and household equipment as non-digital as possible. There are kitchen appliance makers who make things that are non-digital. I have a wonderful non-digital stove that is simple, and I love it.

Many places have opt-out programs for the smart meters. Use this service and opt out. I've had people say to me, "But I have to pay more," then pay more.

Keep invasive items like Nest or Amazon's Alexa out of your home. It's like putting a spy in your house. Why would you do that?

Use one of the better emails. If you read our AT&T recommendation about your email, we recommend StartMail or ProtonMail, or you can bring up your own server if that is possible. But why would you ever use Google mail? I can't understand it. If you understand Google mail, then you have no clue about what is really happening here. It's that simple. Do you think that Google has integrity?

Redundant systems are next. You want to have back-ups and always want to archive. So, if you are dealing with internet and computer and email systems that don't have integrity – as we all are – you want to have back-ups, and you want to have back-ups offline.

I will say it again, and you will continue to hear me say it: Do business with people and institutions that have integrity. Low integrity systems are bad enough. When you combine them with low integrity people, you can really get in trouble.

Organize to hold parties accountable. If you mail something and it doesn't show up with tracking, demand refunds. Demand to know what happened.

We are constantly driving our local phone company crazy because of the hang-up, the disconnect, and the phones that don't work, and we are known to demand refunds. That way they have to go deal with AT&T and why it's happening.

I have some computers that had the ability to connect, stripped out of them. They are offline computers, and they can't connect. I've also purchased a manual typewriter, and I am prepared to use both – either for the worst case, or just for more privacy. That's not to say that NSA can't track what you're typing on your keyboard. They don't need to come in through your computer; they can track you on the keyboard.

Finally, protect your health from EMF radiation. EMF radiation is dangerous. If you listen to Jason Bawden-Smith's recommendations on our interview with him, he says to lessen screen time, particularly at night, to get lots of morning sun, and to get out in nature.

Finally, educate yourself. I've given you a list of great books, articles, movies, websites, documentaries, and Solari Reports. There is great information that is now available. It is very different than it was five or ten years ago when I was trying to figure all this out. There is a wealth of resources. Many very intelligent, brave, courageous people have made all the information available, and the key to finding the solutions and actions that are right for you is to understand what is going on and see things as they are.

So educate yourself. I think that the resources that I've given you are terrific, and they will inspire you because there are many inspiring people trying to help find a pathway through this.

The power of communication systems and surveillance devices is really turbo-charged when you combine it with mind control, so that is why I wanted to turn to mind control next.

**D. Mind Control.** I have published in 2017 the 3<sup>rd</sup> Quarter Wrap Up, *Control 101*, which is a major look at how control is engineered. I strongly recommend it to you, including the movies. There is a great movies section and movies are a significant way to understand how control is engineered.

One of the reasons I was inspired to do that Wrap Up when I did was that I saw the bitcoin and cryptocurrency community not understand how the world worked because they didn't understand how control was instituted and managed. *Control 101* gets into the power and importance of how mind control, I believe, is moving up and replacing finance. It's one of the reasons we see markets being replaced with technocracy. We can do more and more with entrainment and mind control, and that gives the leadership even more ability to manipulate the money and natural resources.

I recommend you start with the *Control 101* Wrap Up. I'm not going to repeat all that material here; I'm just going to grandfather it in by recommending that you take a look at it.

We also have a great Solari Report that we did in 2010 that I also would strongly recommend on entrainment, particularly the use of entrainment to defraud people with financial fraud. Even before that, I did a briefing on mind control.

So *Control 101*, the 2017 3<sup>rd</sup> Quarter Wrap Up, the entrainment interview with Adam Trombly, or my mind control briefing are the Solari Report resources that are very, very helpful. Start with *Control 101*.

All the PDFs and audios are in the archives, but we also have the hard copies available at the store. If you don't have the hard copy, this is a serious enough topic, and it is so important to me that you are very well-briefed on it, so a hard copy is what you might want.

Unfortunately, we are in an enormous revolution in mind control technology. I've watched it roll out my entire life. When you combine it with the revolution in digital systems and software and AI, and the ability to get every person in the world to walk around with their own chip, we don't have to chip people. People are willingly carrying their chip around with them in the form of a smartphone.

It all makes for a lethal combination. The question is: Will the human race survive this?

One of the reasons it is so important to me that you understand the communication and surveillance systems is because of what you see that can be done with them when it combines with mind control and mind control applied to financial fraud and covert operations, including creating control files. You really see most of the game.

If I hadn't lived through the litigation, I wouldn't believe it. But being a target makes you have to look at how the world really works, and I learned a good deal.

Mind control is a very old technology and is nothing new. We know the Templars brought it back from the Middle East from the Assassins during the Crusades and learned about the creation of assassins – basically using this kind of technology, including with children.

In my opinion, it's long-been a key technology behind the endurance and power of the Freemasons, and probably the Vatican and the Jesuits also. I just don't know that group as well.

If you are interested in the history, one of the books that I would have you read is Carla Emery's *Secret, Don't Tell*. You will find it in our 'Best Books Recommendation for 2019' or it may have been in 2018. I recommend it highly because it takes you back to the 1400's, and you see this moving through the centuries via the secret societies and organized crime and the intelligence agencies. It's a very old and long history.

During World War II- we have covered this in different interviews, one with Truthstream Media, and sometimes in our discussion with Dr. Joseph Farrell – the Nazis did significant research and invested a lot in developing mind control technology. The intelligence agencies in the Western world subsumed the Nazi scientists coming to the United States and elsewhere on Operation Paperclip. The intelligence agencies then combined the black budget and the hidden system of finance and the use of corporations and academics and universities to pour a considerable amount of money and prototyping into mind control and the application of mind control in many ways.

The US has taken mind control to places the Nazis never dreamed of. That investment and technology and a more economical delivery system took mind control from the kind when my generation dealt with it, and it was phenomenally expensive to mind control and train a person to be a mind control person. Now you are talking about what appears to be phenomenally a little amount of time and effort to build a school shooter or the kind of people that they use for covert operations currently, or just persuade us all that the moon is made of cheese, and Rachel Maddow is telling us the truth or whatever.

We see mind control in the video games, coming through the smartphones, and entrainment is in about everything. It's rather scary how bad it is.

You need to learn how to protect yourself from mind control, and one thing that I've learned is what you need to do to protect yourself is to realize it's that bad and it really exists. There are multiple parties who have it and multiple parties who are using it.

There are many different tricks that will help you be resistant to mind control. The first is trying to stay in a higher mind. Having a spiritual practice and grounding yourself in a spiritual practice really helps. One of the problems with the extent of the mind control and entrainment is it is really debasing the group mind, it's debasing the culture, and if you can find a way to simply not go there, go in the opposite direction. That is one of the reasons during the litigation I would always go back and talk to the cows or listen to Bach. For some reason the cows and Bach would pull me out of it. I used to get heavy, heavy doses over the telephone when I was dealing on the litigation.

The mathematics of time and money don't lie, and they help you discern between reality and fake reality.

Getting out, staying in nature, and hugging trees really grounds you. To my knowledge, they haven't found a way to mind control trees yet, or at least they haven't bothered. I find nature to be unbelievably grounding.

Stay away from entrained things. Stay away from TV, fake news, and divide and conquer. If you get sucked into the divide and conquer, you are mind controlled because they are all mind-controlled devices.

Anything emotion-driven is the idea. When one of my colleagues says, "The fourth chakra people," meaning people who have been mind controlled to get involved in very emotional approaches to things. Video games are very dangerous. Stay away from video games, but it's hard to get your child 'unaddicted' to video games. The thing about entrainment and mind control is that it's used to create addictions that generate large amounts of money for people. If you can get people addicted to your product, wow! You make a lot more money.

I have to go back to the importance of associating with people in institutions of integrity, so listen to my discussion of the story of Gideon with Thomas Meyer. Competent and ethical people do a better job of not getting debased. If you are around them, you don't get debased. It's what they say in scripture, "The prayers of a righteous man availeth much." The prayers of a man not mind controlled availeth much.

It's much easier to stay 'unentrained' when the people around you are relatively 'unentrained'. That is one of the reasons I wanted to live in a rural community. I wanted to live around people who did concrete functions. When you are farming or trucking or doing electricity, you are closer to physical reality. It's harder to get off in 'la-la land'.

One of my great accomplishments when I was running Hamilton Securities Group was the way that we did the loan sales. So, we did \$10 billion of auctions that were wildly successful and power-shifted the whole market. They were quite amazing if your goal was only to optimize the proceeds for the seller and to make communities safer. We did a good job at both. But the question was: How could I design loan sale processes that were immune to mind control sabotage?

We ended up writing design books and literally building an ecosystem of people throughout the field offices and at HUD and OMB, and around Washington and bidders and all the different kinds of groups. We made the design book transparent, but the whole idea was to build something where mind control couldn't sabotage it. I think that is one of the reasons ultimately, they tried to sabotage me through the AT&T Bell lab's team and why I think that the government used Promis software, in fact, to sabotage the sales. I think it meant that they had to bid above market, and I think that is what really irritated them.

I couldn't have done that if I didn't understand that this exists. So it's important, and you need to understand that it exists. It's one of the things that you need to do. Even if you are building a business and trying to protect your bank accounts and your finances from fraud, you need to know that this exists.

I had entrainment used on me constantly during the litigation. I was lucky because smartphones weren't out yet, so the complete rollout on the cell tower network wasn't there. I look back, and wonder if I could have won if it was as easy to entrain people then as it is today. I'm not sure that I could have. They can move so much faster and at much lower costs now.

There were so many people in government who refused to go along, and we were very faithful about working through the process and doing our paperwork and being the good soldier, and we inspired many people in government to be honest and not go along with any felonies by the other side. Today, with the increased use of surveillance and entrainment and control files, could we have gotten that many people to stand up with us? I don't know.

Since then I've had the good sense to stay away from government contracts and government money. Franklin Sanders says, "All government money comes with a sock in the jaw," and I agree.

As I said in *Control 101*, I want to stress that part of technocracy is using mind control to replace finance as the primary control system. Finance requires prices and markets. The problem with free markets is that you get free flow of information. Prices give greater information, and technocracy is very wasteful. It's nowhere near as efficient as free markets, but if you can use the Federal credit to subsidize everything and make the uneconomic look economic; a perfect example is what I described in the *Dillon Read & the Aristocracy of Stock Profits* story. You still need mind control to persuade everybody that all this makes sense.

People don't like it when you waste their money, so it's very important to keep all of that waste secret. That is part of why mind control is very important to do.

I was inspired to do the first Solari Report on entrainment because I was watching clients get tricked. I was watching clients marketed numismatic coins at very much above market prices. I was watching them market private equity that absolutely made no sense, but they fell for the story of 'socially responsible plus above market' interest rates. It's hard for some people to resist if it's above-market interest rates and spun as socially responsible. In my opinion there is a 90% + chance that there is something wrong.

I believe there was a constant flow of these financial frauds marketed through phones with entrainment, or even through the web with entrainment.

I remember going to Adam Trombly and saying, "Look people are getting cheated and defrauded. One of the reasons is that they don't know that this stuff exists. You've got to help me."

Between the entrainment Solari Report, and the one that I had done on mind control, that really helped.

Another one that helped is Dr. Joseph Farrell's book that he wrote last year called *Microcosm and Medium* that goes into some of the deeper issues in education and culture on mind control. It is very helpful because the platform of targeting you –

– whether it’s targeting you with entrainment to sell you a consumer product or a financial investment, or entrainment that is very specifically targeted to manipulate you – there is a general platform. He goes into it in a very important way.

Earlier under our discussion of **communication systems**. I brought up that I am extremely concerned about the weaponization of population using a combination of the communication systems and mind control. I will be totally honest: I think that drug-addicted populations in Seattle, San Francisco, and Los Angeles are being used as a weapon of gentrification. It’s a way of getting the middle class out, and it’s working. The pathetic thing about it is that our tax dollars are funding the whole thing.

When I did *Control 101* I said, “I have been remiss in not following up on the entrainment Solari Report and really doing a deep dive on mind control.” The mind control is clear. You can see it in the school shooters and the false flags. The mind control is getting more and more intense, and the weaponization of populations is coming. I need people to really understand that this really exists, and they are going to have to deal with it.

I started by saying, “Let me do a search and see what other people have done on mind control that I can use.” I discovered that Truthstream Media, who I knew of and I liked their work, was really deep diving mind control, and they were doing an absolutely fantastic job. So, I made a command decision that I was going to publish all their information and do everything that I could to help and encourage them with the documentary that they are making, which was —————

— ‘Documentary of the Year’ last year on The Solari Report called *The Minds of Men*. It’s fantastic. It goes back to the World War II origins and brings you forward into the 1970’s. I am hoping that they will continue and do one that takes you from the 1970’s until now.

If you watch *The Minds of Men*, you get a good, deep grounding in the recent history – the 20<sup>th</sup> century history. But then if you watch a lot of the videos on their website about mind control, you will get plenty of great information. They do a lot of patent searches and looking at the technology in patents.

I really encourage you to deep dive all the mind control material at Truthstream after you watch *The Minds of Men*. That can help you understand how phenomenally bad it is.

I have dealt with entrainment and subliminal programming. During the litigation, I dealt with it being used on me over the phone. They try to get you to like certain people or feel attracted to certain people, and my challenge was I had to pretend that I didn’t know they were using it, and I had to pretend I liked this person, and I had to pretend I didn’t know. It always makes things very complicated.

I’ve gotten into all these situations in my life where I walk into a room, and I can’t tell if the other people are in the know or not in the know. I have to respond to all the complex questions, trying to figure out if they are in the know or not in the know. With mind control, it gets so complex and dicey. It is very bizarre.

I tell the story in the entrainment Solari Report about it being used on me at a gold conference around 2006.

It's quite remarkable to have it used in a big audience because you literally watch 1,000 people. It's a little like the Nazi rallies where it was used on everybody.

It was clear that they used massive entrainment when Obama was running for President. I showed up at a Trump rally expecting to get massive entrainment, and there wasn't any. I was impressed. It was during the campaign in Pennsylvania.

It is used to market investments. I've run into it with the high yield socially responsible investing in precious metals, ETF, and numismatics. I always get very angry because I have a 'mama bear' complex, and I always get very angry when I see somebody get burned with something like that.

**Consumer goods.** I will never forget when I really impressed upon a wonderful colleague the importance of listening to that Solari Report and reading the transcript. He came complaining to me about one of his family members who had bought a very expensive consumer good that he didn't think they could afford.

I said, "Did you give them the transcript on entrainment? Did you teach them about entrainment?"

He said, "No, I don't give that conspiracy stuff."

I said, "This is not conspiracy stuff. You are responsible. You are the patriarch in this family. You are supposed to provide a covering. You are supposed to make sure that everybody is safe."

The reason they bought that is because somebody used entrainment to encourage them to make a purchase that they couldn't afford. Don't you understand that?"

He said, "Oh, you think that they used it with consumer goods?"

I said, "Of course they use it with consumer goods. This is a huge money maker."

There was a long silence, and then he said, "I'm the head of a ministry for my church. We are trying to help the young men with their pornography addiction. I don't know if you realize it, but pornography is an epidemic in America. Do you think that they are using entrainment to get people addicted to pornography?"

I said, "Of course they are using entrainment to get people addicted to pornography. What a great strategy to get 150 million control files in a way that makes you money. It's a for-profit way of getting control files on everybody, and I will bet you 'dimes to donuts' that on many of the government bureaucrats or academics, that is how they have done it."

To get people out of the way, they put together huge task forces to go after people on pedophilia, but they are not going after them on pedophilia; they are going after them on pornography. You get somebody on a pornography site, you slip in an underage actress, and – boom! – you have them.

So be careful, and warn your children. Please.

**TV shows.** I remember the first time that Adam Trombly showed me how entrainment worked. He had a big flat screen TV, and he showed me some reality TV show like *The Bachelor* where the man picks out the woman he is going to marry. You realize: They are using entrainment technology. They decide, “Here is how we want this story to go. We want him to fall in love with Lady B. Use entrainment. Boom!”

Then you wonder after they get married and go home and there is no more entrainment, what happens.

Several years ago, I did a book review on a book called *Addiction by Design: Machine Gambling in Las Vegas* by Natasha Schüll who was a professor at MIT. It’s about gambling addictions, but particularly machine gambling in Las Vegas. I will read a quote:

“It was not uncommon in my interviews with casino slot floor managers to hear of machine gamblers so absorbed in play that they were oblivious to rising flood waters at their feet or smoke and fire alarms that blared at deafening levels. As the casino surveillance tapes show, the activity can keep a group of gamblers unaware of their immediate surroundings, each other, and even a dying man at their feet.

“You aren’t really there,” Molly told us earlier of the ‘zone’.

“You are with the machine, and that is all you are with.”

It’s one of the most frightening books I’ve ever read, and it’s all about technology being applied to essentially entrain people and get them addicted to gambling.

Sure enough, that is exactly what happens, and the rest is history: The family finances are wiped out. The fact that this is legal is remarkable.

In **communications**, I talked about the ‘thought to skull’ technology – ideas and information that can be inserted in your head. If suddenly you wake up one day, and you are having all kinds of thoughts that make no sense given who you are, and it’s just not you, but more like a stranger has entered your body, you may be dealing with that technology.

If you read *1996* by Gloria Naylor you get the sense of it. Other books that I mentioned in the communication section are John Hall’s book on the satellite targeting. Mark Rich’s books go into the mind control aspect as does the *Bigger than Snowden* website and some of the other sources that I mentioned.

Entrainment combined with addictions is so powerful in terms of creating successful products and building monopolies. So, it’s directly related to what is happening in the stock market. There was a big ‘hullabaloo’ because one pension fund was making noises about youths and smartphones and whether Apple had a responsibility to not do these kinds of things.

So we are building up in modules. Communication surveillance systems are powerful, and they get more powerful when you add mind control. Then they get more powerful when you combine them with covert operations to make money, to manipulate, and to target.

I was amazed when I first moved to Hickory Valley. Somebody loses their job, and within seconds they are receiving a credit card —

— that will allow them to borrow money at 30%. They are on the treadmill and it's getting worse, and the next thing you know, the drug dealer is at the door. You realize, "Oh, within a place there is cross-marketing. The relational databases are working to market across both legal and illegal platforms." It is very holistic targeting.

One by one-325 million people-one by one.

It is important to understand the history and the technology of both the individual and group mind control to scale up to false flags and covert operations and weaponized populations, which we are going to get into as we go to these other areas.

That's it for Part II. In Part III we will pick up on:

### **E.Brand/Prestige**

This is very important.

### **F. Media (including Disinformation)**

You know that I have a lot to say about that.

Until we meet again on Deep State Tactics 101 Part III, please remember: Ladies and gentlemen, don't ask if there is a conspiracy. If you're not in one, you need to start one. Goodbye, and good luck.

## **MODIFICATION**

Transcripts are not always verbatim. Modifications are sometimes made to improve clarity, usefulness and readability, while staying true to the original intent.

## **DISCLAIMER**

Nothing on The Solari Report should be taken as individual investment advice. Anyone seeking investment advice for his or her personal financial situation is advised to seek out a qualified advisor or advisors and provide as much information as possible to the advisor in order that such advisor can take into account all relevant circumstances, objectives, and risks before rendering an opinion as to the appropriate investment strategy.
