2nd Quarter Wrap Up: News Trends & Stories Part II

with

Dr. Joseph Farrell

Catherine Austin Fitts

Dr Joseph P Farrell
C. Austin Fitts: Ladies and gentlemen welcome to The Solari Report. I’m here with Dr. Joseph Farrell and we will be discussing Part II of News Trends & Stories for the 2nd Quarter Wrap Up.

I want to remind you that we have it at the web presentation. You can access with your Solari Report login and click to it from the commentary. It’s at www.currency.solari.com, and you can go direct as well. Log in and you will see a list of all the stories with the headlines that inspired it, the Trump Report Card, the Top Videos. It’s all in the News Trends & Stories section, and it’s there if you want to explore as we talk or after you listen to this audio.

Last week we went through Geopolitics and Economy & Financial Markets. We talked a great deal about FASAB 56 and most of the information in The Real Game of Missing Money. For those of you who are premium subscribers, you received the hard copy. I would encourage you to explore that more.

Farrell: Absolutely.
Fitts:  We will be talking more about that on your vidchat.

Today we are going to talk about **Culture, Science & Technology, Space, Food & Health**, and then **Take Action, Inspiration, and Unanswered Questions** – which seem to just grow.

Let’s just dive in. First of all, Joseph, thank you so much for joining us.

Farrell:  Thank you for having me.

Fitts:  It’s amazing. We are here in the heartland, and are not in the storm shelter.

Farrell:  I was worried about that because they were supposed to have storms today and yesterday. So far, we are in the clear.

Fitts:  It only took me three days to get here.

Farrell:  It’s just been absurd.

Fitts:  At one point, I tried to get here by train and I tried to get here by Greyhound Bus. I tried to get a car rental, and there was no car rental. I tried to take a Greyhound Bus to five different cities and get a car rental from there, and I couldn’t do that, and I couldn’t fly out for two days. It was unbelievable.

Farrell:  Unreal.
Fitts: When you look at how much time and money it costs me from one weather event and you ripple that through the whole society, and if you look at the pain that I experienced, it is tiny compared to what the farmers and many of the businesses are experiencing.

Farrell: The weather affected your schedule and my schedule. It’s bad.

So far this year, I have had the opportunity to ‘tootle’ around Milan and see a great deal of da Vinci. I’ve been reading about da Vinci. Nina Heyn, Food for the Soul columnist, has been writing plenty about da Vinci. I have to tell you that it’s been one of the most rewarding experiences of my year. I’ve always loved da Vinci, but I forget, then I go back and revisit.

One thing that we have tried to do is get everyone who has children to get a book or materials on da Vinci and introduce da Vinci to them. Da Vinci was a man who thought he could be an engineer and a painter and a musician and build new instruments and a scientist and figure out how the circulation system works. He was never limited.

Farrell: He wasn’t and was an amazing man. I first got hooked on him when I was in junior high school. Our junior high library at Patrick Henry Junior High School in Sioux Falls, South Dakota had a two-volume thick collection of his notebooks. I spent hours thumbing through that, looking at the drawings and the elegant calligraphy that he had.
Fitts: Did I tell you what my favorite etching is? When we were in the Ambrosiana Biblioteca. I saw it and had never seen it before. I now have a book with a copy of everything, but I had never seen it before. You can tell that he is doodling. It’s a map of Europe, and then a list which is his bucket list. It’s all the places that he wanted to go. Then he has these doodles of a man on a flying machine, and you realize that he is trying to figure out how he can invent a machine that will get him through his bucket list in time.

This was a man whose imagination was unbelievable. He basically, to a certain extent, was the man who envisioned the whole airline industry.

Farrell: He did many things. He envisioned and then invented a musical instrument that was a keyboard instrument. It looked like a harpsichord, but instead of the jacks that would pluck the string, he had these little cylinders that would rub against the string and frictionize it like a bow on a violin. Somebody finally built one in Poland. You can go online to YouTube and listen to this.

Fitts: What does it sound like?

Farrell: It sounds like a string instrument. It sounds like a violin or a viola or similar. It’s lovely and it actually worked.

Fitts: My favorite one was the fact that he figured out how the circulatory system worked, but it was never really published or promoted. It took another 450 years for modern science to work it out.
Farrell:  He invented tanks, airplanes, and you can find diagrams for helicopters and all sorts of things.

Fitts:  It’s the Year of da Vinci. I am going to be in Paris in October for a big da Vinci exhibit, so we are going to continue to celebrate all year long. If your children or grandchildren don’t know about da Vinci, you want to take advantage of this year to do that.

Story #12: The War on Children.

This has been the hardest thing for me this year.

Farrell:  Me too – the insanity of it. Like you, I think that there is an agenda to it, but we will get into that.

Fitts:  I’m going to go through the hardest part for me. The hardest part was when I was leaving Thailand, and I had booked myself into a resort right next to the airport because I was leaving early in the morning. A wonderful subscriber who is always sending me things that I want to know about sent me an interview of two women in California describing in detail the new sex education curriculum.

Farrell:  I saw parts of that.

Fitts:  I couldn’t finish it and I’m a person who can finish anything. I can look at anything; I pride myself on this.
I was so upset that I couldn’t finish it. I was sitting in this lovely resort, and I was completely indifferent to the blessings of my surroundings and using any of the facilities. I was just sitting there, stewing about this video.

Farrell: It’s very upsetting. I saw parts of it, and like you, I couldn’t finish it. It’s unbelievable.

Fitts: They are teaching children how to be sex slaves.

Farrell: They are sexualizing children so early that children don’t have any experience of childhood innocence. In doing so, they are taking away a part of our humanity and part of our essential experience as human beings. I think that is not the only crime that we are going to discuss, but they are turning them into sex slaves, and they are doing it at an age that I think is the age of innocence. They are also targeting them in puberty with all this information. They are creating more confusion in a confusing time to begin with. It’s just unbelievable.

Fitts: If you consider what I believe they are doing with it, they are trying to get children to change their sex. I think they are using entrainment and they are using mind control.

Farrell: They’re using peer pressure and throwing everything at it.

Fitts: It’s experimenting. In other words, they are looking for people to prototype and try different things, and they consider the people and their family expendable. It’s a bit like the autism and vaccines. They are basically prototyping, and they really don’t care what the cost is to you or your family of their prototype.
Farrell: And the other thing that they don’t care about is the cost to society and to the culture. It’s totally anti-human.

Fitts: They are only prototyping.

What I don’t understand is why anybody would send their child to public schools.

Farrell: I don’t either. In line with this kookiness, I told you about a story from the University of Arkansas at Fayetteville.

When someone sent this to me – and I should specify that the individual who sent this to me identifies as a transgendered individual – I thought, “You have to be joking. This is some sort of crazy Onion satire article.

I opened up the article, and it was linked to a television station in Fort Smith, Arkansas that the University of Arkansas student government association had passed some sort of act that the administration of the university went along with for ‘Menstrual Equality’. That is the title. What it means is they decided that it was prejudicial against transgendered people that identified as men who may be transitioning and not to have access to tampons in men’s restrooms. I thought that we have totally lost our minds if this is what we need to be focusing on.

Fitts: To a certain extent, it’s almost the same as FASAB 56, and what is happening with the money is so terrifying that you keep getting more and more aggressive in trying to create distractions.
The shrieking just has to get louder and louder and louder to keep everybody distracted.

**Farrell:** That could very well be a part of it. This has so many ramifications. This is part of the anti-human transhumanism agenda. It’s part of this quest to eradicate sexual distinction. It’s no longer about equality; it’s now about eradicating sexual distinction altogether. In the process, they are creating a species of unreality so at odds with reality.

**Fitts:** Remember when I was talking about what can be done to move official reality and reality further apart? One thing is to negate price. If you can negate price, then you can move it further apart.

One of the experiments with all the transgender issue is you are trying to make science irrelevant. In other words, “I am free to define official reality, and science is irrelevant.” And not fake science, but hard science.

**Farrell:** I call this another manifestation of the gnostic culture. You can change reality simply by manipulations of language. This one just ‘takes the cake’ because we know what the blowback of this is going to be. Then we are going to have to start putting condoms in women’s restrooms for men identifying as women in their transition period, and on and on this goes; there is no end to it.

**Fitts:** My favorite one was when I was dealing with the smear campaign. I was in the middle of the litigation, and I had 24/7 surveillance. 24/7 of them breaking into my house and following me, and in the meantime, they were dropping these SWAT teams into poor neighborhoods and rounding up innocent children and throwing them in prison ala slave labor camps.
I was trying to do something about it and stop it, and this woman said to me, “Dear, under the laws of attraction you are attracting this onto yourself.”

I said, “Wait a minute. So, any governmental official who tries to implement the law and doesn’t allow them to steal is violating the laws of attraction by being somehow uncool?”

She said, “That’s right.”

I said, “Boy, and I thought that the CIA invented something powerful with conspiracy theory! Now I really understand the power of new age.”

It’s always the victim’s fault.

**Farrell:** It is always the victim’s fault, and inevitably they are creating conditions where they can never satisfy their paradigm, and that is the key to their power. It can never be satisfied. It’s so unreal that it can never be satisfied. That is how they keep their grip on the power.

When people start to wake up that all this has been a game of trying to change reality through manipulations of language, the game is up. But the sooner people wake up and realize that they cannot be manipulated and to just say, “No”, the better. If necessary, pull your children out of those universities. Quit funding them.

**Fitts:** Whether you are paying your property taxes or you are paying tuition, you are paying for your children to be physically and mentally assaulted and abused.
Farrell: That is exactly what is happening. I don’t call it ‘American quackademia’ for nothing! It’s true.

Fitts: One of the articles that I posted was another one of these studies showing that you have a relatively small group of very wealthy people financing all this. To a certain extent, I don’t think that there is a transgender/LGBT movement. There is some LGBT movement, but much of it is very much centrally funded and manipulated.

Farrell: There are transgender people, but I think that the movement is almost totally artificial. When you read stories like this, the artificiality of it is so blatant.

Fitts: Porn. I keep warning both subscribers and clients that I think porn is one of the major ways to get control files on people.

There was one survey I read that said that 98% of American men have watched porn over the last year or six months. What I’ve said to everyone is, “Look, you have to tell your kids that if they are watching this and they don’t realize it but they slip in an underage actress, they have you.”

I think they are using entrainment to get children into this and to get them addicted, and then they have them because they are watching an underage actress. It’s a trap.

Farrell: There is a whole literature out there by people who claim to have been mind-controlled from a very early age, and that is exactly something that is a common thread.
**Fitts:**  Is it through video games or porn?

**Farrell:**  Porn. And the common feature to all this is that they get them at a very early age to essentially become sex slaves, and then that becomes their control file when they move out to become adults. It’s insidious in every possible way that you can think of.

The template for me is the Franklin scandal. The Franklin scandal has now gone global.

**Fitts:**  It’s back to Curtis Mayfield, “It’s a new world, and, brother, you’re the prey.”

So, now we see New York cancel the religious exemptions on vaccines. I was giving a speech to someone recently saying, “Andrew Cuomo engineered the housing bubble, he engineered the missing money from HUD, and when he ran for either Attorney General or Governor of New York, I was told that the first surveys he did were how he could change his image from one of organized crime.” Yet, New Yorkers voted for this man, so what do you expect?

**Farrell:**  You pointed out that the vaccine issue that he ran through, the next day Merck decided to locate in New York?

**Fitts:**  Right before the legislation went through, Merck announced that they were opening a plant in Albany. What a coincidence.

**Farrell:**  Here is the problem, and you have pointed this out too: It is now getting to the point where they can harvest fetal body tissues and so on, and then they are putting this into vaccines.
We are already seeing the articles, and it has been fairly well-documented that fetal tissue is being put into vaccines. It is essentially turning people into cannibals.

**Fitts:** One of my questions has always been: Why are they putting fetal tissue in vaccines?

**Farrell:** I don’t know.

**Fitts:** It’s very creepy; cannibalism does make you crazy.

**Farrell:** It does; it’s a way of introducing spongiform encephalopathy.

**Fitts:** One of the things that is pushing the abortions is that stem cell therapy can work with fetal tissue. So, they want fetal tissue for stem cell therapy, which is very lucrative.

**Farrell:** They want to turn a profit on killing babies.

The other part of this that gives me great pause is we have talked about the weather, and what we strongly suspect is the weather war going on in the Midwest of the country and the heartland of the country. We are watching the farmers being put out of business because they are unable to plant crops and so on. Ultimately, that is going to affect the cattle-grazing industry.

I have this scenario in my head that maybe part of the agenda here is to be able to step in with the manufactured, 3D-printed food and artificially-grown meat.
So, if food prices don’t rise dramatically, something is ‘fishy’. That is the way that I am looking at it. It is a way to sneak in the ‘food’ and get people to start eating it.

I am so aghast at all this that I can’t even find the words for it.

**Fitts:** The venture into the lab-grown meat is explosive right now.

**Farrell:** It’s exploding and I won’t eat it.

**Fitts:** One of my subscribers said that the attorneys fighting the cancellation of vaccine exemptions in California told them that the pressure for vaccines and to remove the exemptions is coming from the tech industry.

**Farrell:** I can absolutely believe that.

**Fitts:** Part of taking technocracy the last mile is not just getting it into the real estate or the cars; it’s getting it into our veins.

**Farrell:** Right into our bodies.

Regarding the tech industry, part of this does not surprise me either. I want to mention this in connection with this war on the food supply and war on humanity. I read an article recently that came out of Great Britain that they were successful in designing nano-surgery robots to go in and do microsurgeries on the inside of the body. That could be a good thing, but if they have the capability to do that, then the theoretical possibility exists that they have the capability to put those things in your body and kill you if you get out of line.
And how do you do that; through the food supply.

**Fitts:** I told you about *The Kingsman*. We were talking about *The Kingsman* where all the global leaders have chips in their head, and if they don’t do what they are told, their head explodes.

There was good news from a court decision in a case at Oberlin. You had three youths who apparently were African-American trying to shoplift a local bakery. The baker objected and had them arrested. Then they were picketed for being racist, which put the bakery out of business. The bakery sued and won $44 million.

My mother went to Oberlin. Oberlin always had an image of a great school, but do you know something? They deserve to lose.

**Farrell:** The American ‘quackademy’ has been taken over, in my opinion, by the social justice warriors infiltrating their sociology departments and history and so on.

**Fitts:** Since when did social justice include the freedom to shoplift?

**Farrell:** Exactly, and then claim that you’re a racist if you get caught. It’s just ‘nuts’! Only in America.

**Fitts:** You know me; I’m an optimist. I hate to say it, but with 5G this war on the children could get much, much worse.

**Farrell:** Absolutely. I look at this as Elana Freeland does. All these technologies are meant to work and designed to work with each other.
In other words, if you have a broadcast capability like 5G, and at the same time you are implanting nano-particles into people through their food supply or through chemical spraying and so on, then you have the ability – literally – to mind manipulate or to manipulate emotions simply by what people ingest, and they don’t realize this.

Fitts:  *Minds of Men* was the ‘Movie of the Year’ for 2018 on The Solari Report. It was Aaron and Melissa Dykes’ movie about the history of mind control from World War II through the 1970’s. They’ve been having all sorts of trouble on the internet – not surprisingly.

So now it is going to premier in a theater in Austin, Texas on July 2nd. I’m going to go there for that and I’m looking forward to that.

I’m hoping they will do one that will take us up to current time because it’s hard for people to believe that it’s this bad if they don’t know the history.

Farrell:  It is, but I do think that the tide is turning in a way. More and more people are waking up to the possibilities of it, and from what I can tell, they are coming at it from a variety of perspectives. People who are following the chemtrails are latching onto the possibilities of this being used in conjunction with mind manipulation.

Nick Begich, the person who wrote the book about HAARP, initially came out with a mind control aspect of this recently. So, people are waking up to it and I hope they wake up in time.
The other part of this is that we always need to remember – and this is something where I am probably ‘beating a dead horse’ – that mind manipulation techniques through the arts, through manipulations of data, and news, and so on; the soft forms are much deeper.

Fitts: They are much deeper and much more powerful. That is why I love your book on mind control. It goes into the deeper aspects.

Before we go to Story #13, I would like to mention the War on Men. Story #12 is the War on Children, but there is a war on men, and we are going to talk about it more another time. It has become very, very serious.

Farrell: It’s becoming very serious because for a couple of years, I have been tracking a ‘men’s revolt movement’, and it is that more and more men are simply opting completely out of any relationship with women. They don’t want to be around them; they don’t want to have any doings with them. The reasons always come back to one essential key that I find very, very interesting – and it’s true. The reason is the risk assessment.

The laws are slanted against them in divorce courts. The culture in general, has been blaming men for so long, for so many things, which are not even their fault. This movement is growing. It’s growing in Japan, in this country, and in Europe. Wherever you had a strong feminist presence in the body politic, you are finding this movement growing.
Fitts: What I see is that a few – mostly men – at the top, have done a great deal to harm people, and they are getting the women among the harmed group to take their anger out, not on them, but on all the men who could protect them and their children from mind manipulation.

So if I’m Mr. Global, I’ve converted your hatred of me into a weapon that I can use to increase control over you. It’s amazing.

Farrell: They’ve done this through child custody law, divorce law, and my experience with it – as I told you – was when I finished my doctorate, and I put in an application at a place where the Dean actually wrote back on their official stationary. He said, “I am taking a tremendous chance in responding to your application on stationary.”

He said, “You have all the qualifications that we are looking for, but due to Federal hiring guidelines, we had to give this position to a lady who hasn’t even finished her doctorate.”

So, the perception is out there among a significant segment of the male population that everything is stacked against them. So, they are walking away from any involvement, and it’s growing by ‘leaps and bounds’.

The problem is that in reality it is a projection back. It is going to increase what should be the complementarity of the sexes into this battleground. It is only going to increase the ‘shriek-o-meter’.
**Fitts:** I told you that when I did an assessment of what it would take to turn things around, the number one divide and conquer that needed to be turned around was men and women. If you can turn that around, then all the others would fall into place. You don’t need to worry about black, white, Asian or protestant. You don’t need to worry about any of that; only worry about male/female and the rest falls into place.

I wrote a series called *Promoting Women* where I go through all the different economics of why a male/female balance is always a much higher performance game in business, in bartending, and all of it.

The thing that I really noticed when I was an investment advisor is how much financial fraud depended on keeping women and men from working together. What I found is that a man and a woman, even if one of them knows not to give out money, prevent fraud. In other words, you cannot get by a man and a woman working together, whereas you can get by one of them alone.

**Farrell:** What began this discussion was when you made the comment that you have observed more and more men being feminized. I think that is true to a certain extent, but what I think in terms of this dynamic of this revolt movement, is what you are seeing is that the so-called alpha males are the ones who are pulling out. The ones who remain in societal relationships with women are the betas, and they are becoming increasingly feminized because that is what you have to be to get along and go along in the current culture.
They are creating such a mess; this is truly a mess. This is a fundamental human relationship problem, and they have created such a mess that I don’t think that anything is going to turn it around unless people can start waking up and see that this is being directed from a group of people – mostly men.

**Fitts:** The most frightening thing that I’ve ever seen was a documentary on the family courts that we had on ‘Let’s Go to the Movies’. If you look at what these courts do to human beings, it’s frightening and unbelievable. It’s a harvesting system.

The goal is to take the family, and between the courts and the lawyers, they just rip you of everything.

**Farrell:** It is also – in its own way – another part of the insidious war on children. It’s absolutely abominable.

**Fitts:** I am getting reports from all over the country that social services are showing up and basically stealing children or poaching them at the ‘drop of a hat’. I don’t know what is going on, but it wouldn’t surprise me if a lot of those children are cycling into things that are frightening to know about.

**Farrell:** Me, too and I strongly suggest that.

**Fitts:** I once had a colleague, and I made her move to other states because I had helped one of the reporters at *Insight Magazine* write a story about one of the big defense contractors that had been accused successfully on multiple occasions of human trafficking and sex slave trafficking. They had just gotten hired by social services, and they were the lead contractor. They started to make noises towards her.
I said, “You have to leave the state.”

Farrell: Look, we know that the system is totally ‘out of whack’. If we contemplate the scenario that if you or I were to do any of these things they are doing in the public schools to children, it would be considered abuse, and we would lose our children to the social services. However, it’s okay if the school does it. Totally ‘nuts’!

I’ve brought this up in Money & Markets throughout the quarter. Because I’m lucky to have really smart subscribers in Seattle, LA, and San Francisco who report what is going on, I’m talking about the end of civilization here.

Farrell: Yes, all this adds up to that. Everything that we have been discussing in the first part all adds up to that.

Fitts: This is not homelessness; this is drug addiction. This is a drug-addicted population, and they are all on Obama plan phones. So, the government is providing them with phones, which they can call 911 and decimate the municipal budget with both 911 calls and crimes. They are literally being allowed to destroy life for the middle class and all these systems. I think it’s a new gentrification army.

Farrell: It is and is to reduce everybody to a feudal state.

Fitts: Once you finish getting rid of the middle class, watch those populations disappear overnight.
Farrell: They will disappear, and this goes back to the FASAB – this idea of gentrification. What you are really setting up is the creation of private jurisdictions. You are really setting up a system that is going to return us to feudalism because feudalism is a private jurisdiction.

You can kiss goodbye to family courts, divorce courts, and all that. It’s going to be privatized corporate jurisdictions, and that scares me. As I’ve said many times, “Corporate charters don’t include the Bill of Rights, and they should. They should be made to”.

Fitts: In combination with private armies, it’s scary.

Farrell: It is very frightening because those private armies can come in and seize your children.

Fitts: In Santa Rosa when they had the fires, it was estimated that you had a couple of hundred homeless people, and they all disappeared.

Farrell: Where are they? That has been a story that I have been watching. People in California are trying to track it, but they keep coming up with the same result. They can’t account for all these people.

Fitts: Science and Technology.

Story #14: Technocracy and Zero Integrity Systems.

This is near and dear to your heart.
Farrell: I’ll say it again: If the systems don’t have integrity, neither do the technocrats running them. I absolutely think that.

Fitts: So, we have Baltimore shut down for weeks by hackers. If you look at how much money we are paying the NSA and the American government to govern and regulate the systems, how can this be?

Farrell: Especially at a time when there are stories out now that the USA has been deliberately hacking into Russian systems? If they can hack into Russian systems, why aren’t they doing their job with the systems here?

Fitts: One thing that we saw is a documentary put out by the Russians saying that Chernobyl was essentially a Stuxnet virus, and also during the same period of time, we blew up a pipeline.

Farrell: We did. I can vouch for the pipeline incident because I put that in my book, *The Third Way*. What happened there was the French DST had acquired a mole within the KGB technical director who was tasked with stealing technology from the West and bringing it to the Soviet Union. So, it was the most highly placed mole in any Western country ever run inside the KGB.

President Mitterrand in 1987 revealed to Reagan that the French were running this mole, and the mole had turned over to the French the shopping list to the KGB. One of the things that they wanted was software.
The Reagan Administration – and I think that this is intimately connected to the PROMIS scandal – allowed the Soviets to steal some software where they had a back door. Sure enough, they used it to shut down a Soviet pipeline. The explosion was visible from space. That’s called the ‘Farewell case’.

**Fitts:** What year was that?

**Farrell:** I think it was 1987 that Mitterrand disclosed the existence. I believe the pipeline existence was 1988 or 1989.

**Fitts:** When was Chernobyl?

**Farrell:** Chernobyl happened with Gorbachev, and I believe I was at Oxford, so I think that was 1987. It would have been right about the same time.

**Fitts:** One of the things that I grapple with every day is how you run businesses when all the software and the systems are completely unreliable and lack integrity.

I had started with all Linux open source systems, but now I am slowly, steadily going back to them. The last three or four days, getting stuck with complicated travel arrangements because of weather, and in dealing with all these corporations, – hotels, airlines, and such – none of their systems work. It’s a mess.

**Farrell:** It’s a total mess.
Fitts: I checked in at the motel, and the woman was grappling with dealing with multiple systems, none of which worked right. Everything is a workaround. It’s unbelievable.

You get a whole series of corporations where the systems are designed for predatory capitalism and surveillance capitalism, and they are not designed to get the work done.

Farrell: Let me give you two examples of how bad this is: I think that it is going to come to the point where we are going to have to be all analog. In other words, we are not going to be doing blogs on the internet; we are going to be doing newsletters with typewriters and copy machines.

Fitts: I have a typewriter.

Farrell: I do, too. I have a typewriter and my web developer has a typewriter.

Fitts: Normally, a Wrap Up is 100 pages. This year it’s 400 pages – in two volumes. The whole thing is over 400 pages long to get a substantial amount of the missing money material, which is in Volume 2.

It’s four times as long as the normal one.

Farrell: So Volume 1 is how we did it, and Volume 2 is what we did with it.
Fitts: Volume 1 is the minimum that an institutional investor needs to do due diligence. Volume 2 has a whole series of material that is going to be very helpful to somebody who is interested, and it offers a little more.

Farrell: It’s so bad. I don’t know if you remember this story about the lack of integrity of systems, but it’s so bad. A couple of years ago, the Russian government began buying up thousands of typewriters.

Fitts: It’s just like the Union Pacific buying up steam engines.

Farrell: It’s exactly the same thing, and exactly the same problem.

The Union Pacific Railroad is not going to buy a Big Boy steam locomotive and go to the expense of rebuilding the whole thing. In other words, they have a locomotive works in Cheyenne, Wyoming capable of churning out steam engines. Why?

It’s not because they feel like they need to contribute to Railroad Heritage Days. It’s not so that they can drive the Big Boy out to Promontory Point, Utah, and have the Golden Spike rehearsal again.

Fitts: It’s amazing to watch the videos of that. It reminds you of how incredibly efficient and amazing those machines are.

Farrell: Absolutely. I posted a video on my website of a Challenger articulated locomotive in 1993 pulling a 143-car freight train over the pass in California. It needed five or six diesels pulling another freight train the other direction; one stem engine, and five diesels. What is wrong with this picture?
It’s the same thing. The Russians are concerned about this, so they start buying thousands of typewriters because you can’t hack a typewriter. You type out your confidential memo, you put it on a motorcycle messenger, and it can’t be hacked.

Fitts: They can track what you are doing on the keyboard.

Farrell: Right, but not on an analog typewriter.

Fitts: Even if there is Wi-Fi around?

Farrell: No.

Fitts: Our slogan for the 2000 Christmas parade slogan from Bolivar, Tennessee – which is the county seat – was going to go on a banner on our 49-year-old firetruck, “Hickory Valley, so far behind that we’re ahead.”

Farrell: This analog business and digital business is so frustrating to me. Recently I went to a convenience store, but I forget what it was that I bought. I went to the counter and paid for it. The lady who was the clerk that night counted my change back to me. My jaw was on the floor.

I said to her, “Thank you for counting my change back to me,” instead of her saying, “Your change is….. (so much money),” and plopping it in my hand with the receipt and leaving me to count it and make sure that I’ve it all. She actually knew how to do it.
I told her, “You are one of the few people I have ever met in recent history who knows how to do this. So, if the electronic cash register goes down, you know how to do it.”

**Fitts:** My most frightening one was when I was driving across the country, and the person I was with asked the waitress where Route 64 was. The restaurant was on Route 64, and she didn’t know. It was frightening.

Another thing that I want to mention under **Science & Technology** is that we see the 5G rollout happening. I am getting reports of people who literally think that they are getting Alzheimer’s or they are getting old or whatever, and they don’t realize that 5G has just rolled out where they are.

We just saw the FTC trying to push through a rule that would allow a private home to enter into a contract to post a 5G tower, which means that your neighbor can basically kill you.

**Farrell:** It’s bad, bad, bad, and even in Europe there is a blowback against it; even in Brussels!

**Fitts:** Apparently the Brussels bureaucrats want to live.

**Farrell:** Apparently so. ‘Fancy that’!

**Fitts:** **Story #15: JEDI Contract – Amazon and Microsoft are Finalists.**

Microsoft has managed to ‘weasel’ it’s way in.
Farrell:  Surprise, surprise!

Fitts:  There are still rumors that the Israelis have a backdoor into Microsoft, which I believe is probably true.

Farrell:  Look, I hate to ‘beat a dead horse’, but as far as I’m concerned, this is all going back to PROMIS and the Inslaw scandal because they parceled that data management software out to many different places, and there are so many back doors in it – and everybody seems to have one.

Fitts:  Everybody but me.

Farrell:  I could use a back door, which would help during my income tax electronic filings.

These systems have no integrity whatsoever. Why would anybody trust them?

Fitts:  Here is the challenge: The competition of the JEDI contract is brutal, and now we have Oracle suing because Amazon hired one of the DOD officials who had been involved in the contract. So, there was fierce competition and it wouldn’t surprise me if Oracle was fronting for Gates.

Farrell:  It wouldn’t surprise me either; nothing does anymore.

Fitts:  So you have a brutal competition, but at some point the JEDI contract is going to be let.
What that means is that you are going to have all the 17 intelligence agencies and DOD in one or two or three clouds. What that does is gives you the ability to engineer all the US cash flows at high speed. Suddenly, you could do 100% of everything you do and fire 90% of the people, and do everything through Amazon, Whole Foods, and Walmart.

As I was driving around America and watched all the Walmart’s being built, I kept saying, “Those are distribution warehouses. They are planning on, ultimately, everybody getting $600 worth of items and then go to Walmart and pick it up every month.”

Next is **Space**. Are you ready?

**Farrell:** I’m ready.

**Fitts:** **Story #16: Increased Competition: The New Space Race.**

Did you know that ‘the moon came from Mars’? What was that about?

**Farrell:** I don’t know what this is about, but I have to tell you that space is getting almost impossible to keep up with. Every week now, there is something – and something massive.

What really intrigues me is that NASA apparently either let a contract or is preparing to do so, and they are contracting for companies to go out and start mining asteroids. In other words, they have the technology sufficiently developed to the point that they are now ready to go.

**Fitts:** This is real?
Farrell: This is very, very real. Do you know what my suspicion is? Chemical rockets aren’t going to do the job. They are going to trot out numerous things and put it on television.

Fitts: This is what I don’t understand. Clearly, we have anti-gravity technology of some sort. Why are we pouring so much money – including venture capital – into chemical rockets? If you go back and look at our Space-Based economy Wrap Up that we did 1st Quarter 2018, we have all these fabulous table presses of all the venture deals that were done in the prior years, and it’s amazing how much money is pouring into chemical rockets. I’m asking: Why?

Farrell: There are only two things that I can think of: Number one, they really don’t have the technology, so they have to pour money into chemical rockets, or number two, they are doing the chemical rocket rollout and the privatized companies – SpaceX and Bigelow and all these people – are doing that to get us accustomed to asteroid mining and big space budgets, which can be easily covered up with FASAB. Meanwhile, the actual work is being done while we are being shown the artists’ renderings and we see the launches.

Fitts: I think that the number one reason for FASAB 56 is space.

Farrell: I do, too. I’m saying they are continuing the model that Hoagland and I came up with that they have a public space program, which is for show, and then there is the real one. At some point, I think that this contract letting and actually going out there and doing it is the slow rollout. In other words, I think that they have decided to slowly disclose this.
This is an important point: I think that what they are going to do is roll out gradually the new energy technology on this planet – including the cars – to get everybody accustomed to the changes and shifts in global finance that are inevitably going to accompany that. Once that is done, and they get us accustomed to that kind of technology in everyday life, it will be, “Oh, by the way, look! We have all this wonderful stuff now that we can do in space.”

**Fitts:** That makes sense.

**Farrell:** I think that is the plan. That is the only way I can rationalize these crazy stories that we are watching and the way that they are coming out. Otherwise, I don’t have any other rationalization for it.

**Fitts:** The Indians recently played the game by destroying a satellite, proving that they could do it, and saying that they are going to put up their own space station. They say they are going to have space weapons. So, the space weapon race is on.

**Farrell:** It is on. The Indians did us the favor of at least being honest about it.

I’ve been going around and around this with people – some of whom I know and respect – who have this idea that we are going to be able to do all this without weaponizing space. I’m sorry, if you are putting your financial clearing in space, if you are putting your data in the cloud, this means that you are going to have to protect it, and no investor ‘worth their salt’ looking at risk management is going to say, “Yes, I am willing to do that.”
**Fitts:** You never put money where you can’t enforce.

**Farrell:** Precisely. So, India has at least done us the credit of being honest about it; so it’s on.

**Fitts:** I see one of the great fortunes of the 21st Century as being the person who figures out how to deal with space debris on an economic basis.

**Farrell:** Speaking of India, the fact that they are launching at breakneck speed all these satellites in that country — and small satellites to boot — is a little indication that, “Yes, we have the technology to do that.” That is what they are doing.

**Fitts:** When I was at Uluru in Australia, one of our subscribers had their first job out of engineering school working for a company that wanted to do the first private satellite launch. They talked to the founder and said, “What’s your dream?”

They said, “Actually, my dream is to deliver a payload of sand to the suborbital platform.”

They later realized that this was so that surveillance could be possible.

**Food and Health:**
**Story #17: Bayer Pays the Roundup Price; Glyphosate Grows; Consumer Pays with Health**
It just goes to show you that Monsanto is taking it on the chin. In my experience, Monsanto is the #1 most hated company in the world.

Farrell: Deservedly, and I put Bayer at a close second.

Fitts: I want to know who made that deal.

Farrell: You and I have gone around and around, and I’ve tried to figure that out.

Fitts: My theory was they had a side deal with the Rockefeller/Bushie/Clinton group, so they thought they were protected. And then they lost the election, and the side deal didn’t hold.

Farrell: That could be; I don’t know. Even if that is the scenario, you are dealing with Bayer, who was a major component of IG Farben. They don’t make a move like that unless they are absolutely certain – which they could not have been in this case. So why in the name of sense did they do this? Is Trump’s GMO executive order the payoff to them? I don’t know. To this day, I cannot figure that out.

Fitts: Will that GMO executive order protect them or their market value?

Farrell: I think that it is designed to protect the market value.

Fitts: If you look at their legal liabilities, I don’t think there is anything that can protect their market value.
Farrell: Maybe or maybe not when you are looking at the weather situation and the farmers in this country, and the possibility of their land being bought up on the cheap and converted to GMO usage.

Fitts: Here is a question: Is the venality of the weather warfare a reflection of the anger over the pushback in the courts against GMO?

Farrell: That could be, too.

Fitts: They could just say, “We’ll double down.”

Farrell: We have the idea that it is our people doing this, but it may not be. It could be anybody with access to the technology or anybody who could buy access to the technology. So that is possible.

Fitts: Let’s just look at the United States as being a subsidiary and of there being a holding company. The holding company is now watching what is happening to its market value from these lawsuits and saying, “We’ll take it back. We’ll just go in there and rip up all the farmland and take it over, and any time that Trump passes GMO we are going to double down.”

Farrell: Since we are talking about that scenario, we have to remember that the principal technology that would be used to steer storms is the ionospheric heaters, and Germany has one. So, Bayer would be in a position to use the German leverage in that heater in Norway to do something like that. So who knows; I don’t. But I think that your scenario is definitely possible. We could be looking at honest to goodness weather warfare being waged by corporations.
China also has that capability, and Russia has that capability.

**Fitts:** Right, but it seems that it’s what you do when you’re getting ‘clocked’ in the marketplace and you’re getting ‘clocked’ by the courts.

**Farrell:** That would be one thing to do – fight back.

**Fitts:** This brings us to Story #18: Farmaggedon – Million Acres Flooding.

We are watching, not only unprecedented acreage flooded and farms destroyed, but also an underplanting, which is going to have a dramatic impact on the supply of food. It’s going to have a dramatic impact on the price of food and the kind of food that you need for animal feed.

**Farrell:** Let’s go back to the scenario we mentioned earlier: If we don’t see food prices rising dramatically, that means they are introducing other kinds of food into the supply chain. That is what worries me.

You pointed this out when we were going through this that you could introduce fetal tissue into the food supply, you could introduce vaccine material into the food supply, you could introduce nanobots into the food supply, and it is already happening.

**Fitts:** It’s called ‘synthetic biology’.

**Farrell:** You could do all this in the guise of ‘stepping in to save the day’ with your technology.

**Fitts:** It’s lab-grown meat.
Farrell: Right, that is coming in to ‘save the day’ from the skyrocketing food supply.

Fitts: I am worried about the *Soylent Green* scenario.

Farrell: That is absolutely frightening.

Fitts: For those of you who haven’t watched the movie, *Soylent Green*, you need to watch it. You may need to take a spa day after you watch it.

Farrell: Charlton Heston and Burgess Meredith were in that movie.

Fitts: I’m very worried about that, and I’m very worried about it in Chicago.

Farrell: Oh, yes, we need to talk about that.

Fitts: I concluded years ago that much of these shootings were organ harvesting. I felt that Chicago was ground zero. Then when Trump started to scream about the deaths in Chicago, I said, “That is telling me that I’m right.”

Chicago was also the meat-packing capital of America.

Farrell: Let’s look at something else in that respect. This is something I don’t know that we have talked about. When Trump was talking about the border problem, for a period he was making these offhand comments about the human trafficking trade. In other words, he was addressing what he thought was the underlying issue with all this – the human trafficking.
Then all of a sudden, he stopped talking about it, and he hasn’t said anything about it in several weeks.

**Fitts:** My concern with people coming across the border disappearing – especially the young people – is that they were going into the underground bases. But I think the question is: Are they going into the food supply?

**Farrell:** It could be all the above – organ harvesting, the sex trafficking, and all the above. I put nothing past these people.

**Fitts:** The reason I got very concerned pertains to a book review I did about six months ago on a book called *China RX* about the deterioration of pharmaceutical supply.

**Farrell:** Because we are getting drugs from China.

**Fitts:** It is so frightening because we are talking about many people dying.

**Farrell:** We are talking about a lot of people dying, and we are talking about a country in the case of communist China, that has absolutely no scruples about using human material in pharmaceuticals.

**Fitts:** If you look at what we are doing to China now, as of the time that *China RX* was written, we were totally dependent on China for antibiotics. Why would you stay dependent on a country for antibiotics if you were having a trade war with them? It makes no sense.
Farrell: It makes no sense unless you are planning to roll out something yourself and you have got something waiting in the wings.

Fitts: I hope so.

Farrell: What I am getting at is: What you have waiting in the wings is Merck in New York and their new abortion laws and so on, to get the supply for their drugs.

Fitts: I’ve always been incredibly careful about food. Sometimes when I travel, I break down and I’m not careful, but I try to be very careful. Given what I saw happening in the food supply about a month ago, I said, “That’s it for me and hamburger,” because I can’t see the meat in its original form. I’ve never eaten at fast food.

I think I told you this story. I was at a birthday party where I had two houses next door to each other and had rented one. I was at the birthday party of the family who had young children, and the grandmother was there.

I was sitting at the table in the kitchen, and there was fast food that the grandmother had brought. She’s not touching it, and I’m not touching it.

Finally, I said to her, “How come you’re not eating the food?”

She said, “I used to work for an auction house.”

I said, “Really?”
She said, “Yes. We used to separate out the diseased animals so that the fast food restaurants could get them because they needed the cheap price.”

It was strange because she wasn’t stopping her grandkids from eating it, but she wouldn’t eat it and I wouldn’t eat it. So, I’ve heard enough stories from people in the food industry to know.

**Farrell:** Normally, I do not eat ground beef at all; I eat ground bison. But these days, given the lack of integrity in virtually every part of the system, you somewhat put me off that. It’s going to have to be chicken from now on.

**Fitts:** I think we need to start really making sure that we see the food in the original form so we know where it comes from.

I was at a Santa Fe farmer’s market, and it is fabulous. If you can live in a place that has a really rich supply of local food, support it.

**Farrell:** We have talked about this before. When I was a boy, my mother used to go to the local farmer’s market in Sioux Falls and buy her produce. She would not get her produce at the grocery store; it was always at the farmer’s market because it was fresh. The bins were out, and she would talk to the farmers. Where have these markets gone? They are all but gone.

**Fitts:** There are some around the country, but it comes down to the consumer. You have to support local farming. You have to support the development of the local food supply. If you don’t support it, it will go away.
This is not a function of price. There is food, and then there is something else, but you don’t know what it is. So, you had better make sure that what you are buying is food.

The only price analysis that you should be doing is between real food and real food. This other ‘stuff’, I don’t know what it is.

Story #19: Vaccine Wars.

Alan Philips, who we’ve had on The Solari Report several times, and is one of the top attorneys in the country on vaccine exemptions, is now imprisoned. I don’t know if he is out yet, but they put him in prison.

One of the reasons they did is because the local bar association demanded to see all his client files, and he wouldn’t give it to them.

Farrell: That is a violation of attorney-client privilege.

Fitts: I know! They wanted to go after his clients. It’s a mess.

I keep donating to his GoFundMe account, but this effort to wipe out exemptions is serious. I have one subscriber in California who said that it is less than one percent who exercise exemptions in California. They are really going after them. They are trying to pass a bill that cancels all the exemptions.

Farrell: The question is: Why?

Fitts: That is my question.
Farrell: I don’t have any good, easy answers other than they want to get people marked with this ‘stuff’.

Fitts: This in violation of the Nuremberg principles. This is Hotel Auschwitz.

Farrell: They found their model and liked it. They are taking away every protection of law that we have.

Fitts: This makes you a property of the state. A human being is no longer a human being with divine rights and authorities; a human being is the property of the state, and they can use you to prototype an experiment.

This is all experimentation and is exactly what the Nazis did in the camps.

Farrell: It is, and it’s an anti-human/transhumanist agenda that they are on. It makes me wonder who really is behind this. It is so inhuman. I’m tinkering with the same scenario that you are. They are serving something that is not entirely of this planet because everything – the environment, the food, the climate, and the cultural institutions – are all under assault.

Fitts: You have a farmer who can’t afford to feed his herd, so he is experimenting. He doesn’t care if he has a high die-off because he has to cull the herd anyway. He is looking to radically reengineer and see what he can do with all sorts of breeding programs.
Farrell: Exactly. The problem I see is it is so out of control that they may end up cutting their own throat in the process.

Fitts: Here is what is interesting. I remember talking to an entrepreneur who was starting a GMO animal business. It was a group of people who were in the leadership on high tech farming. He was doing these genetically-modified mosquitos that would then breed with other mosquitos, and it would cull the population.

If you look at his fervent belief, he absolutely believed that this was great and it was so productive and so much more productive than other methods. It was all, “This is the way that things are going, and it’s so productive.”

They can’t fathom what could possibly go wrong.

Farrell: Exactly. They have the blinders on that this system is a closed system and it’s not going to have an effect or spillover on other systems. This is exactly the logic behind GMOs. The whole thing is out of control.

These people are hyper-materialists, and in addition to that, they have a lot of hubris and no humility about the complexity of the systems that they are dealing with.

Fitts: Ulrike Granogger published the *Wave Genome* last year, and she does a fabulous job of showing the pop experiments in Germany where they take two sets of eggs – one organic and one non-organic –
and prove that the electromagnetic energy is totally different. They are chemically the same, but electromagnetically they are totally different.

**Farrell:** I eat organic eggs. I buy organic eggs, and I can tell you that is true. There is a big difference in my energy level after eating those versus the mass-produced egg. It is totally different and is the same thing with vegetables.

When I shifted to bison when I was living in South Dakota. In South Dakota you can go into restaurants and get fresh bison to eat because they have large herds there. I noticed an immediate difference.

**Fitts:** Story #20: Quantum Biology Blossoms.

That is what we are talking about – quantum biology. We have an entire world of people for whom quantum biology doesn’t exist.

**Farrell:** They don’t know the electromagnetic aspects of biology. If they want to know, I would urge them to read my book *Microcosm & Medium* because I talk about some of those. Every living thing has its own electromagnetic signature unique to it. When you are putting in ‘stuff’ that is tinkered with, you are interfering with that signature; you are interfering with the health of your body.

**Fitts:** During the last three days, I’ve been in these corporate motels and hotels, and they all have LED lighting. I’m living in the dark because I can’t stand it.

**Farrell:** I can’t either.
Fitts:  Story #21: Weakening of the Earth’s Magnetic Field.

I continue to try to find good information on this and feel that I don’t begin to have what I need to understand what is happening, but if there is anything that concerns me that is going on, it’s this. The question is: How much is our CERN, HAARP, and other interference creating the problem?

Farrell:  I am with Elana Freeland. She said something very interesting when I interviewed her on my website in the ‘Dialogue Members’ area. She said that given the fact of all the spraying, of the GMO modifications to the food supply, of technologies like HAARP and ionospheric heaters, and all those things, that there is no longer any such thing as ‘purely natural’ weather.

Fitts:  I agree.

Farrell:  That is the most profound thing I’ve heard this year, and it is absolutely true.

I want to ‘toot your trumpet’ here because you have pointed out that you will not have any discussion about climate change or global warming or any of this with people who do not know about this technology. It’s pointless.

The idea of John Q. Public, rancher, raising his cattle and causing climate change through cattle flatulence or any of this Alexandria Ocasio Cortez Green New Deal; this is all being brought about by that type of activity is absolute, utter, total, complete ‘BS’.
There is no such thing as natural climate change, and it is these technologies that are the problem. To blame it on every day human activity or animal husbandry or cows out in the field eating their grass and ‘letting one slip out’, is nonsense. It is total nonsense.

I hate to be rude and crude about it, but it is total nonsense.

Fitts: The last time that I wrote up an intelligence conversation about the environment, I believe that the financial system – if anything – is to blame for environmental problems. It’s the financial system.

In other words, if you have no transparency and fiat currency and infinite secret money through the Treasury mechanism, you are going to have environmental damage. You are going to have a governance system that can make money destroying the environment.

Farrell: Yes, they can make money destroying the environment, and they can blame it on climate change, which is what I think they’re doing. You and I both think that.

I don’t know if people are familiar with the movie, The Core. It’s about the collapsing magnetic field and all the bad things that can happen, but it turns out that the collapse was caused by precisely this kind of technology. It was caused by this type of secret black technology that had stopped the dynamo in the interior of the planet from creating the magnetic field.

Fitts: If you were the planet and you were being treated like this, wouldn’t you quit?
Farrell: Oh yes! If I were Mother Earth, I would be ‘bitching up a storm’ right now and she just may be doing that. At some point there has to be a limit to this.

Fitts: The planet has a heart, too.

Farrell: The problem is that if we allow these technologies to continue to exist without any accountability whatsoever in their use – even in terms of the disclosure – we are ‘up the creek without a paddle’ or a canoe.

Fitts: Let me turn to our next section, which is our closing and Unanswered Questions. I want to start with Take Action.

We have a fabulous editor for News Trends & Stories, Brad Eddins, and are trying to move him over to only focus on finding Take Action stories because there are so many great things happening, but you have to dig them out; you have to find them.

Story #22: Support Great Leadership.

I think that the most important thing we can all do is to support great leadership. If there is one place where my subscribers are naïve, it’s that we are trying to scapegoat the leadership, and we haven’t faced the culpability of the general population.

The general population basically says, “Give me my check, and give me a story of ‘I am good’ and ‘I am fine.’”
Somebody gave me a statistic of how many people are banking at JP Morgan Chase or how many people are voting for somebody who engineered the housing bubble, and the reality is that everywhere I turn I see Americans supporting ‘scumbags’ and supporting Q.

One of my favorite lines from T.D. Jakes is, “My elevator only goes to the first floor. If you are going to the basement, you have to get off and take the stairs.” Everywhere I turn I see people going into the basement and supporting people who take them to the basement. If we are going to change, I don’t want to hear, “I’m not important,” or, “My bank account isn’t important,” or, “What I do or how I use my time isn’t important.”

I am important, and how I use my time matters. That is why culture matters – among other things – because culture is about what we give our attention to, how we spend our money, what we feel, and what we think, and it all matters. So the question is: What can we do?

The first thing that we can do is support great leadership.

Farrell: And do it locally. Why would you bank with JP Morgan Chase where your money may be loaned out to some ‘scumbag’ in the outhouse of fraud? Why not keep that money in your community? Go to a local bank, go to a local credit union, or something like that. Try to keep the money local. That is a small thing and it doesn’t take time.

Fitts: Even if they ship it into the center, the Fed tried to do something very centralizing a couple of years ago, and the small banks ‘went nuts’ and started screaming.
They had conference calls and were screaming, and the Fed had to back down because they needed their funds to flow.

Even if it’s all coming into the center; if it comes from 8,000 small banks or 8,000 credit unions as opposed to three big banks – that is a big difference.

Don’t worry about what everybody else is doing; go through your time; go through your banking.

The reason I want people to buy their food locally or to bank locally is because I fear for the quality of their food and I think their money is going to disappear.

My problem is not just that we ought to support great leadership; my problem is: Why in the world are you banking or buying food from criminals?

**Fitts:** And why are you voting for them?

**Fitts:** It’s not safe.

**Farrell:** It’s not. The more local you can be, the better.

**Fitts:** The more intimate that you can be, the better.

**Farrell:** That is a better term. The more intimate that you can be, the better off you are.
**Fitts:**  I’ve had quite some fights with my neighbors. I am really worried about this new FCC rule. The FCC is trying to make it possible for a private homeowner to put up a 5G tower on their home so that they can radiate their neighbors. As soon as I saw that, I thought, “Uh-oh. I have a problem,” because my neighbor was the one who put the cell tower behind my house. So, she can make some more money on 5G, and then I’ll really be in trouble.

I think that we have to battle it out locally.

**Farrell:**  And we have to take the battle to the states. Just like Missouri with the 2nd Amendment law, they have to start preemptively passing nullification.

**Fitts:**  There is a great Solari Report in the archives called *Know Your Sheriff*. You ought to listen to it because the sheriff is the person who is going to decide if they show up and stick you full of vaccines against your will. He has jurisdiction; he can overrule the Feds. That is why the state nullification is so important. So listen to *Who’s Your Sheriff*.

**Story #23: Great Actions.**

There are so many. We can get back to the lawsuit against Oberlin. You see that people are doing great things all over.

Apparently, there are 50 municipalities suing the FCC over 5G. We’ve listed some of them on Solari. I love the architect who completely outed the whole Notre Dame situation.
Farrell: I am so glad that he did because I saw some of the pictures of what they were planning to do to it – greenhouses and all this new age gnostic ‘nuttery’. It’s unbelievable.

Fitts: Italian dock workers refused to load Saudi arms that were being shipped for the Yemen war.

Farrell: Good for them! We need that in this country. I’m amazed that people in this country haven’t stood up and said, “No,” to all of this.

Fitts: Inspiration.

Let me talk about one of my big inspirations this year – da Vinci. There is no doubt about it.

You would not believe how much time I have spent this year listening to organ music, and I credit you with that. I never thought about organs before, other than mob movies and space movies.

Farrell: Or haunted house movies.

Fitts: I spent much more time with music and art, but I think that one thing that has really inspired me this year is: During the last year I have gone back and learned a great deal more about the assassinations that had such a powerful impact on our generation.

I had always been interested in Forrestal’s assassination. David Horton is going to be joining us on The Solari Report, and by the time this plays or is published, he will have joined us.
I was a partner at Dillon Read & Company and was there for eleven years. There was a huge portrait of Forrestal in the dining room that used to always stare down on us. Forrestal was a very real presence at Dillon Read, and his story was a very real presence.

He was a poor boy. He had gone to Princeton and did very well. He had gotten a job as a bond trader – an entry level position – at Dillon Read, and he worked his way up to President, which is very impressive, particularly at that time. It was owned and controlled by the Dillons, so you didn’t just get to run it unless you were rather amazing.

Then he became Secretary of the Navy and led the building and operation of the Navy during World War II. That was when the Secretary of the Navy was a cabinet-level position. Then after the war, Byrd, Highjump, Roswell and he made a trip to Antarctica. He led the effort to write the 47 Act – the National Security Act – and became the first Secretary of Defense. Back then, they called it ‘Secretary of War’, but he was the first Secretary of Defense. Then he was pushed out by Truman, smeared tremendously, and then assassinated.

**Farrell:** Walter Winchell and Drew Pearson were involved.

**Fitts:** They made it out to be that he was crazy, and said that he committed suicide. But basically, they threw him out of the 16th floor of the Naval Medical Center in Bethesda. The debate has always been what killed Forrestal. Was it the fight over Israel, was it the Zionists, or was it the black budget? Apparently, Forrestal was arguing for transparency on the black budget.
It is interesting, thanks to David Martin’s book, and what I now realize, is that Israel got their statehood before Forrestal was killed, but the CIA got passed approximately three weeks after. I talk much more about it with David Martin, but my vote is that it’s the same crew that killed John F. Kennedy.

Farrell: Absolutely. I recently did that McCarthy book.

Fitts: Which was very inspiring.

Farrell: Thank you. In that book, I identified a book that was written recently by an author who pointed out the suspicious circumstances of Forrestal’s death and McCarthy’s death – both in Bethesda. Looking at Forrestal and all the things that he was either a part of or was alleged to have been a part of – Forrestal appeared on the Majestic 12 UFO documents. So, you have a man who is familiar with high finance, who is running a department of the military during World War II, and basically is tasked by President Roosevelt to create the two-ocean Navy that we would need to fight the war. Think of the management and the administrative nightmare that had to be.

Fitts: Forrestal was tight with Bernard Baruch and the entire war manufacturing operation.

Farrell: Then you have somebody who is opposed to the Zionists’ direction that Truman wanted to run. Finally, in the McCarthy book, I pointed out that Senator McCarthy sometime in 1952, had indicated that he had met with Forrestal when he was elected in 1946, and that is what got him on the anti-communist panel, ———
which I can readily believe because Forrestal would not have been in favor of all the things occurring.

**Fitts:** Forrestal was very anti-communist.

**Farrell:** Yes, and he would have seen it firsthand in the Roosevelt Administration.

So, there are four things that would have been motivations for getting rid of the man, and when you put them all together – Israel, the black budget business, the UFO business, and then the national security/communist infiltration business – any one of them alone would have been sufficient, but when you have all four operating and coalescing against the same individual, you bet!

**Fitts:** Then you have a syndicate. In fact, it looks remarkably like the syndicate that did 9/11.

**Farrell:** It does.

**Fitts:** Thanks to your book on McCarthy, you are starting to see the completer picture. If you read *The Devil’s Chessboard*, your book on McCarthy, and David Martin’s book, *The Assassination of James Forrestal*, you are beginning to see a threat. It’s like a tapestry, and it’s beginning to simplify it in an extraordinary way.

Do we notice that it’s the same crew again and again and again?

**Farrell:** It’s the same crew, and as I was saying earlier, it looks like we have a continuation of that 1950’s fight, in a certain way, with Trump.
Fitts:  I will tell you something: That crew just did FASAB 56, and FASAB 56 essentially blows a whistle and says to that crew, “Anything goes. You don’t have to sneak around anymore; anything goes.”

Farrell:  This complete Forrestal thing – from what I’ve read, and I’ve only started reading that book – has already ‘blown me away’. It’s very clear this is connected to that full crew. This is the beginning of that whole operation.

Interestingly enough, the same people who led the media campaign against Forrestal were the same people who led the media campaign against McCarthy. That, more than anything else, ‘blew me away’; drew Pearson front and center. And talk about a muckraker!

Fitts:  It’s interesting because you see how they create an official reality which is a complete lie.

Farrell:  Totally! To this day, I have people write me, “McCarthy smeared all those people in Hollywood.”

McCarthy had nothing whatsoever to do with those Hollywood investigations. Nothing!

Fitts:  It’s amazing.

Farrell:  Don’t bother about the record; just believe the narrative.

Fitts:  And technocracy was backed up in Hong Kong. That is inspiring!
Farrell: I will agree with that. The communist lady who they put in charge in Hong Kong is up against some real pressure.

Fitts: She is in the middle and that is a big squeeze.

Farrell: It’s a squeeze from Beijing and it’s a squeeze from the protestors. I think that the protestors are going to win.

Fitts: I think that the protestors are going to win, and the reason they are going to win is because China wants to do well on the Silk Road. They cannot afford to be heavy-handed or they would blow it across Eurasia.

Farrell: They would blow it across Eurasia, and who is waiting in the wings with Hong Kong? Britain.

Fitts: So far, it appears to me that they are playing it right. It’s tough because it’s a face issue.

Food for the Soul.

We have heroes every week, and we have had two Food for the Souls every month. We have done one on Notre Dame, one on Rembrandt, and several on da Vinci. There is plenty of great material, and I hope that everybody makes sure to access the Food for the Soul column.

Unanswered Questions.

We ask the same questions every quarter: Who is Mr. Global, and what is the governance structure on Planet Earth?
I find it so amazing that we live on a planet where everything is secret.

**Farrell:** The way that I increasingly think that we have to look at Mr. Global is Venice – in every way. There is a hidden nobility that has been operative for centuries behind the big family names. That is number one. Number two, we have to realize in looking at that kind of structure, the people at the top are not the people running it.

**Fitts:** They behave like a people running it. It’s just like *Dune*. You have the people running it who are running a franchise, but they report to the empire. It’s the *Jupiter Ascending*; earth is just a very small part of a much bigger corporation.

**Farrell:** We have to look at the technocratic manager class as being the people really running things. They are reporting to this secret group – whatever it is. When I say ‘secret group’, I’m not thinking of people like the Rockefellers or the Rothschilds or the usual people; they are the front men for something far older.

Let’s not forget the first time that a Malthusian idea of a maximum carrying capacity for the planet was not Thomas Malthus; it was Venice that came up with that idea. So, this has been a consistent part of their operating meme for centuries. Back then, the carrying capacity was one billion people – believe it or not – and that was true with the technology they had in the day. That is the problem with these models; they are always models that don’t factor in technological progress and how that changes the situation.

So, Mr. Global and the governance structure, the way I’m looking at it, is a corporation that is a franchise reporting to the empire.
But in reality, I think it’s flipped. I think that we are looking at an empire that is reporting to some sort of corporate structure.

**Fitts:** Here is the question: Who are the equity owners?

Mac Tonnies wrote the book on Cryptoterrestrials. His theory was that we are run by a small group of people, which are essentially a separate civilization but located on the Earth. If you look at his theory, it certainly aligns with a lot of my weirder experiences with reality on Planet Earth.

Another answer is that we have interdimensional beings – demonic intelligence.

**Farrell:** I don’t rule that out, simply because of the anti-humanity of all these things.

**Fitts:** I don’t rule it out either. I will say that I have dealt with many of the more aristocratic WASPs who would get unbelievably frustrated managing the population, and I can see why in 1995, they gave up and said, “We refuse to take responsibility. It’s impossible. You are always being double-binded and put in a prisoner’s dilemma trying to manage them, and we just give up.”

I can see them starting to develop an attitude of, “You are a different species.”

You know my story of the woman at the CIA getting very mad at me because I didn’t understand where evil came from. I said, “I am perfectly happy to learn,” and she wouldn’t tell me.
So there I am, a taxpayer, and paying her salary. She is using my money to keep secrets from me, and then getting mad at me because I’m ‘stupid’ because I don’t understand her secret knowledge.

It was as if, “You hate me because I don’t have your secret decoder ring, but you stole the money to get your secret decoder ring, and you won’t share it.”

It’s so ridiculous that you don’t know what to say. So, I can see all these different dynamics, but I can’t explain what is going on without fathoming that we are being run by somebody who thinks of themselves as a different species.

**Farrell:** I would agree.

**Fitts:** When I was a child, the way that the leadership looked at bloodliners, they really did think of non-bloodliners as a different species.

**Farrell:** I don’t doubt it for all the reasons that people can look at in my books.

You see that philosophy appearing in very peculiar places. We can talk about that later.

I think in a certain sense, the governance structure on the planet is also in tatters. In other words, I think the grand globalist game has been splintered so badly that they themselves, are not entirely clear on the direction they need to go.
Fitts: The learning metabolism that new technology brings is so accelerated, and it so rips apart the different institutional frameworks and relationships that I think they are struggling.

Farrell: They are. The other thing that I have to entertain here is that if they are reporting to anybody, it appears the communication has broken down. There are certain indicators that if there was any sort of regular communication with whoever it was they were reporting to, – assuming this is off-world to begin with – that has somehow broken down.

Fitts: That’s why I say we are in never-neverland, and the possibilities are so many. Normally, to deal with a situation like this is what you would want to be high trust, but there isn’t a high trust. So, whatever the unipolar moment was supposed to be, they did blow it. That’s not to say they didn’t succeed in stealing trillions of dollars and they think they have won, but the reality is that you are left with a situation where the leadership doesn’t trust each other and the general population’s leadership doesn’t trust each other. So, you have the Midianite thing and you have a mess.

That is why I say that we are in never-neverland because it opens up so many different scenarios.

One of my greatest frustrations over my entire lifetime is that I keep trying to warn the general population that where the leadership can go is so dark that they can’t fathom it; they can’t fathom the psychopathy, and they can’t fathom the danger.
They can’t fathom it, and because the technology is invisible, they are not seeing it coming fast enough. It’s hard for someone to understand they are dealing with a governor who is either a different species or who is a psychopath or both. The benefits of acting now is to back it all up because it can be backed up, but you have to understand why you have to back it up. There is no middle of the road.

**Farrell:** There is no middle of the road, and you are now dealing with at least a century of institutionalized psychopathy – at the minimum. That means there is no underground. That is why it’s essential to be local and ‘intimate’. You have to start dealing with people who you actually know and trust or that you can get immediate access to.

**Fitts:** That is why I say ‘intimate’ because we have plenty of psychopaths. We all deal with psychopaths locally.

We put up *The Real Game of Missing Money,* and put it up with bulk discounts. So you can buy one, but you can buy five or ten and get discounted prices and I will tell you why. It was very inspired by being in Hong Kong and then watching the protests.

I lived in China and I lived in Hong Kong. I spent time in China, and I love the Chinese. The thought of being under their governance is frightening to me. They are racist people. The PRC Constitution is a Han-based constitution; this is a DNA-based constitution.

The reality is that I am a child of the Scottish Enlightenment. I am a child of the Constitution and the Bill of rights. I think that was one of the most fantastic things that has happened in the history of the last 2000 years.
There is Jesus, and then there is the Scottish Enlightenment.

**Farrell:** We have to work on that!

**Fitts:** The idea that each human is a sacred individual with divine rights, is a very powerful model. I don’t want to lose it.

When I look at what is happening, a multipolar world won’t necessarily be better; it could be much, much worse. So, I would rather push back in the United States and in Europe and return Europe and the United States to a human model than to plan on things being better in a multipolar world.

**Farrell:** I would, too.

**Fitts:** My attitude is: We have to push back. One of the reasons we did bulk discounts and did template letters was so that people could start to engage with their CPA, with their pension fund trustee, with their money managers, and with their bankers. It’s just like the Fed story with the 8,000 bank presidents. If thousands of financial professionals start saying, “Wait a minute. What is going on here?” One of the things that I have documented is that we have the law on our side, and if everybody starts asking questions and pushing back, you don’t need to do anything; you just need to ask questions. Send it to your pension fund trustees and say, “Should you be buying Treasuries?”

Don’t tell them; ask them. They are the fiduciary. Let your money manager decide. Let your pension fund trustees decide.
Farrell: Lay out your case, and then ask that question. The more people do that, eventually it is going to start getting traction. Your tax accountants and your investment advisors are going to start saying, “Hmmm. Maybe there is a point here.”

The more people asking those questions changes the field.

Fitts: Just send it to your money manager and say, “What does this mean to me? What should I do?” Just ask the question.

Farrell: If they say nothing, then get a new money manager! I’m serious.

Fitts: You want every person dealing with resources. So, whether it’s your mayor or your state and local representatives, or whether it’s your CPA or whether it’s your money manager or whether it’s your banker – anybody who is dealing with your resources and managing your resources – you want them to know what is going on. You don’t want them pretending they don’t know and they don’t need to know. You want them to be awake.

Farrell: No argument from me on that.

Fitts: If thousands of financial professionals started asking questions about the Treasury market, and it can back up. We want it to back up.

Returning Europe and America to a human world is essential.

Farrell: There is no alternative out there.
Fitts: There is no place to go. We are not going to run to Hong Kong and be safe.

Are we going to go to war with Iran?

Farrell: My guess is, no.

Fitts: So what is all of this craziness about?

Farrell: My theory is that if they are going to do anything of that nature, they might try to beta test your privatization paramilitary model. That would be my guess if they are going to do something.

Fitts: They are going to let loose the mercenaries and see what they can do.

Farrell: Yes, and they are going to try a new type of corporate regime change if they do anything like that.

Fitts: They can afford to pay, not only mercenary armies, but they can afford to pay the foreign military. But where is the foreign military that can win that one?

Farrell: Good question! They are going to have to have people on the inside, and we know that there are people in Iran who want to get rid of that regime, but the problem is that those people are probably not going to know what they are dealing with if they ‘hop on board’ a scheme like that. They might be getting something even worse than they have now.
Fitts: That has often happened to them throughout history.

Farrell: The Iranians have the 1954 coup with Mosaddegh in their memory, and then the installation of the Shah and all that. They are probably going to be cautious, but nevertheless money buys a lot. We might be looking at that kind of scenario.

Fitts: I think that is probably why they are trying to starve Iran – so they can buy more people internally.

So, in the 3rd quarter what should we start off with? There is Independence Day on July 4th. What should we be looking for in the 3rd quarter?

Farrell: I don’t know, but look at food prices, and if they don’t go as high as they are predicting them to go, then be suspicious of your food supply. That is number one.

In terms of global geopolitics, I would watch what happens for the Tory Party leadership very carefully in Great Britain.

Continue to watch Italy; that is a given under the circumstances.

I would say to watch Russia with respect to Iran.

Fitts: Russia is the big swing.

Farrell: Russia is the big swing, and Tehran is now hanging by Moscow’s pleasure.
Fitts: One thing I brought up to you earlier and that I want to bring up again, is Chris Cuomo did an interview on CNN about whether or not there would be a 2020 election.

We are watching a political process in the United States, which is both a huge embarrassment globally, but you are watching two tsunamis coming at each other.

So we have McConnell saying, “We are going to cut social security and Medicare,” and in the meantime, we have a field of Democratic candidates who are promising the moon and the stars as if they are completely indifferent. It’s almost as if these two tsunamis are coming at each other at high speed and can’t see the other.

Farrell: Regardless of who wins in 2020, a significant segment of the population is not going to like it. The old bottle is broken down, and largely the reason that it has broken down is because this last Presidential transition was the first non-peaceful Presidential transition that we have had since Abraham Lincoln.

Fitts: Sometimes I look at the Democratic field and wonder, “Is that a form of entertainment that has been sent to keep people from recognizing what is going on financially so they can steal the rest of the money out of the pension funds?”

Farrell: I think that is part of it. Those people are so ‘Looney Tunes’ and disconnected – and I’m not talking about Schumer or Pelosi or anybody like that who has been around the block for a while. I’m talking about the newcomers.
I think it’s theater designed to distract everybody. Regardless, whoever wins in 2020 – be it Trump or whoever the Democratic nominee may be – there is going to be a significant segment of the population that is not happy.

If the Democrats win and we start getting a radicalized agenda, then it’s over. I think that things will bust apart.

**Fitts:** That may be the goal.

**Farrell:** You’re right. That may be the goal, and it’s a gloomy prediction.

**Fitts:** Tell us a little about you in the 3rd quarter.

**Farrell:** I’m going to continue working on the book that I’ve been researching. It’s going to take me a while to get around to this one, but the McCarthy book opened up some ideas, and I’m going to be pursuing them.

**Fitts:** In a way, the McCarthy book wasn’t supposed to be; it just popped out.

**Farrell:** It was not what I was expecting. I was not expecting Roswell references and occupation money, financial scandal, and money laundering. I wasn’t expecting any of that. I was expecting what everybody else would expect, which was: Have you ever been a member of the Communist Party? No!

**Fitts:** Have you ever been on a spaceship?
Farrell: Have you ever tracked German V2 missiles by radar and atomic cannons?

Fitts: If the listeners or readers haven’t read your book on McCarthy, the atomic cannon is real. There’s a picture in the book.

Farrell: The complete thing was just bizarre, but it’s opened up some ideas that I want to pursue. It has put a whole different spin – especially on Forrestal.

Fitts: It integrates our world. Suddenly, Forrestal to McCarthy to JFK to Bobby Kennedy all makes sense, and it goes right into FASAB 56 with the 1947 Act and the 1949 Act. It all makes sense.

Farrell: Stop and think of JFK’s June 1963 Executive Order of 4 billion United States notes, bypassing that whole secrecy operation.

Fitts: Before he did that, he went to visit Forrestal’s grave. Have you ever seen that picture?

Farrell: I’ve seen that picture, but I didn’t realize it was taken before that.

Fitts: I think it was at the end of April.

Farrell: That would have been the right timeframe.

Fitts: It was as if he was going to confer with him because he knew how dangerous what he was doing was.
Farrell: The whole Kennedy-McCarthy nexus that most people don’t even know exists; that is interesting.

Fitts: Was Kennedy the only one who didn’t censure him?

Farrell: John Fitzgerald Kennedy was the only Democrat who was not there for the vote for censure. And Eleanor Roosevelt called him out on it in the 1960 Democratic Convention. She wanted him to go on record against McCarthy, and he did, but he waffled when he did it. She would have known because she was married to the man who brought all those Communists into the government.

It’s an interesting thing and I’m going to be doing that in the 3rd quarter.

Hopefully, I’ll be able to practice the organ more. I haven’t been able to because of the weather. I unplug that during storms; I’m referring to Bruno.

Fitts: Bruno is the nickname for your organ.

Farrell: Right, because it’s loud. I want to do more practicing. I have this Giza Guys Get-together next weekend with some of the male members of my website.

Fitts: That will be wonderful.

Farrell: I hope so. I want to see what everybody is thinking as we sit around and smoke cigarettes and contribute to climate change.
Fitts: Given what is happening – whether it’s the weird weather or the volatile politics – it’s not a bad time to lay low.

Farrell: I’m laying as low as I can. I have said to some people that I think we are in another President Buchanan moment in history, version 2.0. I really do.

Fitts: I don’t remember that one.

Farrell: He was the last President before Lincoln, and that was not a peaceful transition in power. I’m that worried about this situation.

Fitts: One of the reasons I am so focused on transparency is because transparency will solve a lot of the divide & conquer. I can’t tell you how much of this is all attributable to naiveté and not understanding the fundamental economics.

Farrell: It is, just like it was back then and we are in that situation.

Fitts: I hope you know that one of my favorite factoids on the Civil War is at Gettysburg when Lincoln read the Gettysburg Address, he spoke last. Do you know who spoke first for an hour? The President of Harvard. Also, who made all the money on the war?

The Harvard Endowment hedge fund.

Farrell: General Beauregard, I swear you put your finger on a whole lot of mystery that has been unresolved for us!
Fitts: Ladies and gentlemen, we will be back for the 3rd Quarter Wrap Up in three months. It’s been wonderful, and it was worth all the effort it took to get here.

Farrell: Three days of it!

Fitts: Three days of planes and trains, but there was no waterway between here and there.

Farrell: What do you mean? There was plenty of water to get from there to here! You should have rented a canoe and you would have been here early! We have water.

Fitts: Joseph, it’s always a delight, and it has been a real pleasure. I want to thank you for joining us on the 2nd Quarter Wrap Up: News Trends & Stories and Amazements.

Ladies and gentlemen, goodbye and good luck!
