

The Solari Report

January 30, 2020

**Deep State Tactics 101 –
Part IX and Part X
Cybersecurity,
Covert Operations &
Crime, Targeting of Children,
The Beatdown: Company,
Neighborhood, Cohort**

C. Austin Fitts: Hello and welcome to *The Solari Report*. Today is January 30, 2020, and this is Catherine Austin Fitts. I am delighted you could join me for *Deep State Tactics 101, Parts IX and X*. This is the completion of the *Deep State Tactics* series, which we are doing as part of the *2019 Annual Wrap Up*.

In Part IX, I am going to cover four areas: One is **Cybersecurity**, the second is **Covert Operations & Crime**, the third is **Targeting of Children**, and the fourth is **The Beatdown: Company, Neighborhood, Cohort**.

Part IX

'Beatdown' is an expression that the African-American communities would use when they were targeted by a real process of using deep state tactics to do a variety of things – none of them good. But a beatdown cannot just be a neighborhood; it can be a cohort of people or a company; it's when you get a concerted attack on a group.

So, let's start with **Cybersecurity**.

Cybersecurity is something that has blossomed the last few decades as digital telecommunications and systems have rolled out. It's 'rocking' our world, and it is something that you need to understand, especially if you use digital systems.

The best way to understand cybersecurity is to understand that there is no such thing. If it's cyber, it's not secure, and it was planned and designed that way; cybersecurity is a misnomer, if you will.

The greatest artistic explanation I've ever seen of the integration of digital technology into our life is an animated version of Stravinsky's *Nightingale*, which was done in partnership with the Paris Opera. I think it was done around 2005 or 2006, and I will put a link to it. It's available on YouTube, and it's quite remarkable.

You should read *Control 101*, which is the *Wrap Up* we did on the control systems, including the movies and documentaries available in the *Control 101 Wrap Up*, as well as the movies and documentaries in *Deep State*.

It's amazing how much can be taught through the movies when it comes to cybersecurity. Check out *Control 101* and the movies and documentaries and the *Deep State* movies and documentaries. When it comes to cybersecurity, it's not all in the movies, but much of it is. There are some great documentaries on this topic.

At the very highest level, all digital communications flow either through cables on land or under the ocean, and through satellites orbiting the Earth and then are disbursed through networks of towers on land. It is important for you to understand who controls that hardware – who controls the cables, who controls the satellites, and who controls the towers. If you understand who controls the hardware, you understand who really controls.

The reason you occasionally will see stories of cables getting cut underneath the ocean is that covert warfare is underway, sabotaging the digital systems. It's a hardware version of cyberwarfare.

So, please remember that whoever controls the hardware, ultimately controls. That is why corporate media and the financial institutions have to do what the military says. The military has direct or indirect control of the cables and the satellites that are the communication that the communication and data feeds depend on. Remember, you're in businesses – both in corporate media and financial institutions – where mere seconds can make the difference between who is the winner and who is the loser.

Cybersecurity is not zero or one; you cannot achieve 100% security, but you can achieve better than zero. So, that is what you are looking to do – achieve the best that you can. Doing the best you can is important. It is very difficult to achieve security against the intelligence agencies in your own jurisdiction of your own country, but it is important to do the best that you can relative to large corporations that are engaged in cyberwarfare, or just invasion of privacy as part of economic warfare. It is very important to protect yourself against organized crime and foreign intelligence who can make money in an organized crime way. Then there is both organized crime and foreign intelligence that have a myriad of contractors, hackers, stringers, and there are an unbelievable and growing number of parties in this capacity.

Remember that the systems – the cyber world – is a war-fighting domain, whether it's economic warfare or all-out war. The resources going into it to use as a weapon among global players is increasing steadily. This is a major tool to achieve political control and economic control. So, you have to pay attention to cybersecurity.

Let's review some of the ways that you can do this. **The first way to pay attention to cybersecurity is to use digital systems as little as possible.** Keep your life as digital-free as is functionally comfortable. Think of digital tools that you want to the extent that they serve you and give you energy. Price in the full cost of care, maintenance, invasion of privacy, and risk. Don't be oblivious to those things; you need to price in the cost to you of taking those risks.

The second way is the extent that you need or want digital technology to be functional, and most of us do. You need to understand that dealing with those systems typically has a controlling or predatory aspect, and we are in a period of the 'Wild West'. This is early integration, early rollout, and even though you and I pay governments to enforce the law, for the most part, they don't feel like the cyber world is their responsibility, and they don't enforce the law. If anything, they are teaming up with organized crime too often. The cyber world has blossomed far beyond the capacity of the people we pay for enforcement to understand and deal with it. So, you and I are functioning in the technology Wild West, and we need to remember that.

The third thing is to make sure that you have multiple redundant offline copies of all critical records. Never depend on third parties or online digital records to document your assets or critical data. Digital data can be changed, it can be manipulated, it can be falsified covertly unless it's offline and secure. Please make sure that you have redundant offline copies of any critical data. A paper hard copy is good.

The fourth thing to remember is that you need to take responsibility to learn digital systems. This one is very hard for me. To a certain extent, I am saying, "Do what I say, not what I do," because I struggle with this one.

If you are going to use them, then you have to become **literate** in them. We all started out thinking our business was banking or media, and then discovered that our business was banking systems and software or media systems and software. So, part of this is understanding that you cannot trust the experts.

Absolutely, if you are in college or still getting your education or you have children or grandchildren who are doing that, this is part of being literate in a modern world. Make sure they build this into the curriculum. Whatever their business is, there is going to be a significant aspect which is the digital systems for that business.

Let me give you three stories to help you understand what I mean by, "You need to be literate."

I'll never forget when I ran Hamilton Securities that our goal was to be the first with prototyping and testing all the digital tools, and I worked very hard with my systems team – who were very good – to come up with a system for the company called Groupware. I spent a good deal of time on it, but I was very skeptical. The key to the Groupware – the one functionality that I had to have – was that it could do global searches, making it very easy for the members of the company to find whatever they needed without having to worry about database organization. Not that we weren't going to worry about database organization, but I wanted global search so that we didn't need to worry about missing things.

It was a year and a half design process before we chose the final software, I was adamant about the global search. So, we spent a few hundred thousand dollars on the software. We loaded it, and sure enough, it didn't do a global search. If you look at the time and expense of that failure, it was so many multiples of that \$200,000. That is what you will find: There is a nonalignment between the software industry and the customer. First of all, that is because it is designed for predatory invasion and control. Put that aside, what happens if you look at the price of the software is tiny compared to the cost of the company if it fails or doesn't work, and the cost of our time of loading it and integrating it into our operation.

It's like allowing glue to be poured into your internal mind. You pay money to buy the glue. The glue pours in, and the next thing you know, you have something that is costing you a large amount of money, and I've even seen it ruin businesses. So, remember that when you deal with software, 10% of the cost is buying the software, and 90% of the cost is integrating it, using it, and the risks of having it go wrong or to even provide a back door for the deep state or various parties in the deep state.

The next one is what I call the '**Google trance**'. Approximately five years ago we needed a new systems administrator, and we wrote detailed 'scopes of work'. I'm a big believer that if you want something, you need to be able to write very clearly what it is. We shared it, interviewed, and hired someone with great recommendations. One of the things that we made clear in the initial scope of work and repeatedly in the interviews is that we do not use Google and we do not use Facebook. This was all made very, very clear, and it was not an option.

So, the person we hired came on board, and the first thing that they did was to recommend that we move all our email and some of our other productivity software to Google. It was unbelievable; it was as though they were in a trance or hypnotized or whatever. One thing led to another, and in short order, they had to be fired.

I've run into that trance. I call it the 'Google trance' where Google makes it so easy and low-cost to move everything to their platform that everyone wants to go with the flow, and no matter how many times you say, "I'm not using Google," they can't believe that; they are in the trance.

Another place you've seen this in many parts of the software industry is **complete ignorance of traditional risks** – business risks and custodian risks.

When the Bitcoin industry was 'flying' in 2017, I went to a Bitcoin conference, and the ignorance of custodian risks was just unbelievable. Of course, now you are seeing they are learning the hard way, but their ignorance was utterly baffling.

One of my favorite examples was the subscription software that we signed a contract with in 2012 or 2013. We spent about six months in 2012 doing a search for a subscription software company, and after much careful and thorough research, we decided on one. We spent six months with them working out what we would do and how it would all work. They were a relatively new company.

One of the things that we had in our written specs was that they must do PayPal because we have a fair number of subscribers who use PayPal. Before we started into our six-month process, negotiating everything out with them, that was one of the written stipulations that they use PayPal.

Sure enough, they agreed to use PayPal. We then spent six months getting ready to sign up and onboard, which we did. We went to the onboard meeting, and the first thing that happened was the head of operations who was going to be in charge of the real onboarding looked at our specs and said, "We don't do PayPal."

You can't imagine it. My chief of operations couldn't believe it. I warned her, and I said, "Look, this happens all the time."

Part of it is that we are talking about a technology which is unbelievably **complex** in an industry that is going fast. You get many people in sales and marketing who are not masters of the complexity. But , that one of the advantages that the deep state has is they have our money and they can hire all the smart people, and they can deal with the complexity. It's an enormous barrier entry for small businesses.

It was one of the reasons I was working in the 1990's on local structures that could allow small business to access this kind of high-level complexity, and I'm sure that it is one of the reasons the deep state hated my model.

Another thing to think about, of course, is that the **predatory culture** in the tech industry was purposely encouraged. You should listen to my interviews with Nafeez Ahmed on the CIA, NSA & Google, who really created Google and Facebook. These are really creatures of the intelligence agencies, in my opinion. Then listen to my interview with Bill Binney talking about the insistence on collecting 100% of the data when it wasn't necessary. All the data, of course, was managed by corporate contractors. That was so they could suck it all into the databeast.

So if you use these systems, then you are going to have to take responsibility to get literate about them. It's always frustrating for me because it's unbelievably time consuming, but you have to build it into your budget. If you are going to play with them, you have to understand them, and you have to understand how to achieve successful integration of them into your life or business.

The fifth way is to be as careful as possible in the choice of your systems, your software, and your virus protection. These things are not equal at all. If you look at our FAQ's at www.Solari.com, we give you a list of what we use. Those are our choices for best practices.

The other thing to think about is one of the more significant risks of depending on these systems is when there are risks of serious interruptions, and they are rising. So, if we get a failure of the global order that dislocates either the economy or the energy supply, or we get an EMF attack or we get a solar event, all these things could seriously dislocate these systems. Making sure that you have a backup to go non-digital is very valuable.

I want to 'beat the drum' again about the JEDI contract. The first task order under the JEDI contract has been put out to Microsoft at the same time that Microsoft is telling everyone that they have to upgrade their Windows operating system. I think there is a real danger of integration with the Federal and military clouds. We know that Amazon has the 17 intelligence agencies in their cloud. This is all happening at the same time that we are getting dire warnings of a pandemic or proposals for a vaccine. It's all just too close for me.

Many people think of these as separate organizations when they get hooked up and integrated digitally. I think of it as one remarkably integrated databeast. So, please, please, please get off of Microsoft; please, please, please wean yourself off. I'm weaning myself off of Amazon. I just think it's dangerous to be in and share databases and software with military intelligence.

The sixth way is to be judicious about sharing your data with the databeast. Let me give you some examples. When I was doing investment advisory with individual clients, if they had digital gold accounts – online accounts where you could access and manage their gold holdings – the annual FBAR (the foreign financial reporting in the IRS) would ask you for your digital gold account number. I really feel that government data is not secure and it's not safe. If you look at the ease of hacking those accounts, I just don't think that you want that full account number floating around on the internet, especially with the corporate contractors and the databeast.

What I would have them do is fill out the account number with several X's in the beginning, as you do with credit cards, so that you had the last four numbers. So, it would be very easy for the government working with that company to identify your account. That makes it clear that you are not trying to hide it. They have everything that they need to find your account, but then it can't be hacked. I would have my clients do that.

The second thing is that I've warned many families it is very dangerous for your children to be in **digital medical databases**. For example, if I had a child in Chicago, I would do everything I could to keep my children's' data out of digital databases because that data can be sucked up and used to identify children who you want to traffic, or children who you want to organ harvest. So, in any area where you have a high incident of trafficking or organ harvesting, you want to keep their data out of digital databases.

I used to stipulate with doctors that I would only talk to them if they kept handwritten records. I didn't want any data in the digital database. Or, I would agree with the nurse that what they were going to put in was garbage.

I would give dates like '1442', but only with their permission; we had to agree. They would tell me, "Well, the software requires something," so I would say, "Just put in 1442."

The seventh way is to understand that you are functioning without privacy. So, don't break the law on the telephone. All the people who are now dealing with the Department of Justice on the educational bribes were committing felonies on the telephone, and the databeast was recording it.

People always say, "But I'm not a target." The NSA records 325 million people all the time. Why do they have all those taxpayer-funded facilities that can hold enormous data?

Live clean. Don't fall for the entrapments or give someone control file material. Don't watch kiddie porn online; just don't do that because it's an entrapment, and it's another reason to avoid people who lack integrity. One of the dangers is that you can be clean as a whistle, but you allow somebody into your life who makes false allegations. Snitches make money making things like that up.

The other thing is that we are now watching an explosion of, what I call, '**gotcha enforcement**'. When I was in Washington, there were 51 different groups or agencies with the power to arrest. I think that most of them had the power to carry weapons. In addition, they are hiring contractors to plow the clouds. If you think the Amazon cloud is something, wait until you see what it's like when they get JEDI and Amazon.

Read Palantir's website and see what they are doing. They are using analytics across the databeast to look for anybody breaking rules. Remember, the agencies in the government are generating more rules than you and I even know exist. So, they are using powerful analytics to look for ways of generating fees for agencies by finding violations of the law.

When I was in the litigation, Hamilton Securities had to survive 18 audits and investigations. It was unbelievable the time and expense involved. I'm sure that they were using these early technologies, but it's gotten much more sophisticated since then, and they are sucking up much more data.

Everybody knows what a 'speed trap' is. Now we have **digital speed traps** all over the cyber world, and it is going to get much worse.

I always have people tell me, "But I'm not important." Wrong, stop it; don't ever think that, you are very important. With AI and software, it is highly economical to have the equivalent of three Stasi teams on you 24/7 – not just from one party, but from hundreds of parties. So, get ready to be wildly important in the cyber world. Remember, those tools have been designed by some of the smartest people on the planet.

I was always amazed when I came to Hickory Valley. I live in a very poor county, and I would be the target of predatory lending calls. If you look at the playbook and the software, this had been designed by the equivalent of the top attorneys on Wall Street. It was like dancing with the top attorneys on Wall Street, so I used to have plenty of fun with it because they had no idea who they were calling. It was just amazing to me the high IQ of the technology that any person picking up the phone was up against.

That is why I recommend Shoshana Zuboff's interview on **Surveillance Capitalism**. It's our choice for *Let's Go to the Movies*. I think that and the interviews and videos of Katherine Albrecht will really help as well. She is the person who wrote up *Spychips* and warned us about all of this.

Finally, please **shun** the people and companies doing this; cut them out; don't invest in them; stop supporting them; get out of the trance. You have to discern differences between people. In a court of law, you are innocent until proven guilty. In a court of investing your trust, your time, and your money, businesses in these entities are guilty until proven innocent. People, companies, government agencies must earn your trust the old-fashioned way.

Ultimately, one of two things is going to happen. We are going to get out of the 'Wild West' world one way or another. So, the legal framework for the application of digital technology will have to be reinvented and rewritten to protect the sovereignty of individual human beings in the face of this powerful new technology. There is a much better chance that will come out of Europe or someplace in the emerging markets than in the United States. That is my guess, although you never know.

The alternative is that we descend into a technocracy where every human is harvested and micromanaged by AI and software and algorithms. That is clearly where the United States and its allies are going. That AI and software are going to be combined with loads of entrainment and mind control.

The debate over the use of this technology and the double standards in its application and availability is really at the heart of the secrecy and missing money. The missing money and the Federal credit mechanism bureau dollars have made a very significant contribution to transferring much of this out of the black budget and into Silicon Valley and financing most of it.

We cannot get back to a sovereign model without coming clean about what is at the heart of the secrecy and missing money, so the two issues are very much tied up together.

The **cybersecurity situation** is another example of the extraordinary extent to which power corrupts, and to which absolute power corrupts absolutely. Those with extraordinary financial resources provided by the taxpayer, whether directly or indirectly, who have the lead on this technology really have the 'bit in their teeth', and the absolute power has gone to their head. It's back to Leonard Cohen, "We were blinded by the beauty of our weapons."

I need to make a special note here that Israel has made a particular effort to establish global leadership in cybersecurity and cyber warfare. Again, that is working with their backers in the United States, which one way or another, it always comes back to Beverly Hills.

There are numerous allegations regarding back door access to US software and databases by Israeli and British intelligence. British intelligence goes back to starting at the end of World War II, and not to mention the hacking by foreign intelligence. Since the Clinton impeachment, the Israelis appear to have used the dual passport citizens in Congress and the Administration, and their access through the systems to the one-way mirror to great political advantage.

China is another country that has made a significant investment in cyber warfare, and that is one of the reasons the Huawei and 5G competition between the US and China has become so extreme. Controlling the back door to Huawei-based telecommunication systems would facilitate, among other things, the theft of enormous amounts of intellectual capital, which is one of the biggest trade war issues.

The bottom line is that digital systems are a primary tool of the US deep state and their allies and other global factions. The manner and application of these tools continue to evolve at very high speeds. Buyer beware.

Covert Operations & Crime.

There is a covert side to almost everything on Planet Earth. You should listen to or read the *Secret Space Program* speeches by Farrell (two with him) and Fitts (one with her), because it really explains the evolution of the black side of the money from World War II on. We could go back centuries, but if you just start there, you will see how the CIA was converted into the most powerful bank on the planet, and how the covert side has grown.

Part of what we are looking at is that the hidden system of finance and black budget finance as the covert has grown and grown and grown – not surprisingly since they don't have to pay taxes. That is the magic of compound interest, and they don't have to obey the law. They are obviously going to outperform the lower margin businesses.

On the covert side, there are literally trillions of tactics. That is one of the reasons I encourage you to check out the movies in *Control 101* and *Deep State* because the movies are so great at describing the myriad of tactics. Of course, I have told many, many of stories throughout the series, and I don't want to repeat them. too many stories already.

But let me give you a conceptual overview about how to think about covert operations and crime in the tactics.

First of all, are **perpetrators**. As I've tried to describe, the number of perpetrators are many. This is a very richly-populated world. We have organized crime, and organized crime is usually tied in with the intelligence agencies bringing in the drugs and distributing the drugs, or engineering mortgage fraud or tied in with real estate development syndicates who need to move people off the land or move them from here to there.

Enough of it can get in at the lower levels into reengineering land and real estate development, although clearly, **cyber warfare** is another one.

It's important to remember that there are several groups that have the **entire planet networked** place by place. One of them is the Masons, another is the Catholics and Jesuits, and another is the Mormons. The Mormons are amazing at having everything on the planet as a territory, and they are sending people there for ministry.

However, the Masons are builders, so you will see much of the local economic activity organized around what they love to do, which is build. I think those are some of the reasons we overinvest in housing and real estate and churn it, because the Mason network loves to build.

It's important to remember right now that there is something special going on at **real estate**. With the 'Internet of Things' and what is happening in the energy world, there is fantastic money to be made on real estate – either from a lower energy price or bringing in the Internet of Things so, for example, that an apartment stops being just an apartment, and now it's a shopping mall.

I think that part of the pump & dump of the housing market in the United States was designed to lower homeownership so you can convert more housing to rentals that support REITs and other income-producing properties because they and the mortgages can be 'securitized', and that is very attractive for Wall Street. Then you have the banks, of course, laundering the drug and mortgage fraud and helping to manage the 'financial bazooka'. That is a very important part on the financial side.

The corporations during the 1960's and 1970's. Considerably more of organized crime, which was run separately by the different mafias, has been taken over by the intelligence agencies and working with the large corporations.

Part of that move was not only moving in on the local organized crime syndicates; it was moving in on all of the local business. So, you are seeing corporations integrate and take over much more of the local business market share. We will talk about that a little later.

Then, of course, you have all the **stringers and the snitches**, which is remarkable, particularly because you can now manage and run them on smartphones at very low costs. It's a job at \$10 or \$12 an hour, and it is happening all over the world.

Then you have the **foreign government intelligence agencies** who are operating across districts. So in Europe, you have NATO and Operation Gladio.

Chip Tatum was a US intelligence operative who decided to turn whistleblower, and he described the special task forces of intelligence operatives from multiple jurisdictions who would be pulled together and used by Bush and others in the United States for domestic assassinations. So, it's much easier to get people from a variety of different countries and move them into a different jurisdiction where they are easier and they won't object as much.

Tatum became a whistleblower because they wanted him to do domestic assassinations, which was more than unconstitutional.

Then you have the **media organizations** that help and play with all of these people.

It is very important to know who you are dealing with to help you understand how to manage dealing with deep state tactics. One of the things to remember – and this is one of my great frustrations – is that you and I are financing the perpetrators. So, when we buy the stocks of the people who are doing this, when we pay taxes to the people who are doing this, and when we shop at the company store, we are financing the perpetrators. It's always a matter of frustration to me when somebody is pouring vast amounts of money into the perpetrators, and they come to me and say, "We want you to stop it."

What do you think I can do if you are pouring vast amounts of money into the perpetrators? You have to stop it!

Part of the problem, of course, is the economics of paying taxes to a government for the purpose of safety and enforcement when, in fact, they are using that money to do the absolute obvious. There are thousands of examples, but let me give you a couple.

One of the most frightening documentaries I ever watched was on divorce. It was in *Let's Go to the Movies*. Basically, you are paying for a court system that, if you look at how it operates, it is harvesting you. You see the same with foreclosures in the court systems. They make money from an abundance of foreclosures, and they are one of the constituencies. When someone like me comes along as Assistant Secretary and stops the foreclosure pipeline, suddenly that fee flow dries up. You have far too many parts of government who are making money from communities failing or people failing. That was what was so frightening about how we set up the mortgage fraud or the student loan model so that the players could make more money from people failing to pay their loan than succeeding.

If you look at the movie *Taken* with Liam Neeson, it tells the story of a French government official who is allowing the Eastern European gangs to operate in Paris doing trafficking and prostitution. It is generating big money, bribes, and kickbacks. So, the protection of two American tourist teenagers comes down to the fact that one of their fathers has a significant CIA and covert operations background and is able to come in and, at least, save his daughter. Unfortunately, by the time he gets there, it's too late for his daughter's friend.

How these players operate country by country, state by state, county by county, and town by town varies tremendously. How it breaks down in the local level is very different. It is one of the reasons you want to be in a well-run state, a well-run country, a well-run town, and why you care about what your local sheriff and enforcement is.

That is why if you are moving, you really want to research these issues before you move. If you are in a place that is not good, you seriously want to think in this environment about getting out because as we see more and more debasement where the enforcement and the financial controls have broken down, you run the risk that everybody is going to become a target.

One subscriber sent me a new book called *Blip*. It's somewhat of a version of Chris Martin's course on resource issues and the problem of peak everything, and it's clearly one of the factors that is driving the debasement.

The **trends for debasement** are going to be very significant. We had the opportunity many decades ago to shift to be more sustainable, and it was very frightening for me in the late 1990's to see, instead of doing that, they were choosing to bubble and bump & dump the American people, and keep us in the bubble while they sucked all the assets out for the financial coup.

However, now that we are through that period, and we've missed that opportunity, no doubt that it means the adjustment is going to be harder, and the pressure on people who are going to be squeezed to engage in organized crime is extraordinary – especially where the culture is weak. That is why you should do anything that you can do to be in an area where the culture is stronger, and the financial controls are stronger.

Build protection at the intimate level. Know your sheriff. The most important thing if you are in the United States for the 2020 election is who your sheriff is. Depending on where you are in the world, you need to understand local enforcement. You need to have a relationship with law enforcement, and you need to have a relationship before you need that relationship.

Let's look at the goals of **covert operations**. We looked at the perpetrators, so let's turn to the goals.

The number one goal of covert operations is to make money, and there are thousands of different specifics, but, as an example, you are looking to move a tenant from a low rent apartment to a higher rent apartment. If you make them sick and if you are in the US, you can get them from a Section 8 housing into assisted living. When I was looking at this in the 1990's, you could move them from \$800 a month to \$2,000 a month; you just had to use electromagnetic weaponry to make them sick.

Clean out rent-controlled buildings because you're not making any money if you get everybody sick and they leave or they die. Then maybe you can accept the building market rate or you can raise the rents. There are other ways to do it; it's not just electromagnetic weaponry. You can do things to the water, do things with the heat, etc.

Moving people out of community. Arson is a big one, as you know, but it's a tactic that goes back for centuries; arson is nothing new.

Crime waves are very useful. Then there are home invasions, car thefts, and the list goes on and on. You drive people out with crime.

You can **squeeze businesses or economies** to force them to sell assets. This can be an entire country. In the 1997 Asian crisis, you saw that they brought in the banks, made many short-term loans, and suddenly, pulled the credit. It's the dump in the pump & dump, and suddenly, all those places have to open their economy for equity investment, and you change the rules.

Look at Venezuela selling all of its gold in the last ten years. Clearly, they are being squeezed. People want that gold.

The vast majority of situations I find have a goal of making money, and it's simply hard for people to see that because they don't understand the operation they are dealing with or watching as a business model. But in any situation, you need to know how the money works. Identify the land real estate assets that have value, and then figure out: How does this relate to wanting to buy them cheap or get control of them as a legal or regulatory manner? How does this increase the rent? How does this steal assets or money?

Grabbing or protecting market share is always a big one. If you look at the hacking that *The Solaris Report* has gotten over the years, I suspect that the large media companies have put together hacking teams in 40-50 countries around the world. It's almost like a consortium of hackers, and they turn that on to stop other people from getting control of the narrative, or getting the hits or getting the revenues.

If you saw during the bailouts, independent media skyrocketed and was wiping out corporate media. That is very bad for their advertising and other statistics that they need to make money.

A big one is **control of the narrative**. When the truth starts to get out, they look ridiculous. Of course, they are looking ridiculous more and more, and that is a market share battle.

Political power is a big one because when you win politically, you get control of the budgets and enormous pools of capital, whether it's at a local level or any of the regional levels or the Federal level. And, of course, there is a related fee flow that comes off those budgets and pools of capital. So, the ability to rig elections is very, very important because it gives you a seat at the table to, not just rig that level, but a seat at the table to rig the higher levels, including the national or international, the ability to control government purchases and contracts and rule-making.

Remember the quote that I used in the Dillon Read story, the old New Jersey street adage, "Make a law, make a business." So, rule-making can be unbelievably profitable.

Narcotics trafficking is very powerful. Narcotics trafficking started in a big way in 1913 when we brought in the central bank and the IRS. It really kicked into high gear after World War II when the Navy, the intelligence agencies, and the mafia made big partnerships to engineer the European landings.

So, a decision was made in the open model of the Bretton Woods system to open the United States up for major narcotics trafficking. Drugs in general, are a very important way to affect political control on a for-profit basis. Just think of this as an LBO (leveraged buyout) of anything from a community to a country. You get the country to finance their takeover.

It worked in the Opium Wars, and it has been working ever since. It has been very useful to build using the war on drugs- the train tracks for control of people in places – not only in the United States where it was really developed to a fine tune over the last couple of decades, but that technology has been taken globally. It's one of the reasons I keep recommending Michael Woodiwiss' book to you.

So those are many of the different ways that you make money from using covert operations. But there are other purposes; it's not only about making money.

One purpose is **play**. It's sport – literally hunting people. If you listen to or read my book reviews on Mark Rich's books or Dr. John Hall, who has done a great job of documenting it, you will see these different groups come together and literally target people. Often sex is involved, so you are targeting women who live alone, and you are using them sexually, but you also do hunts.

One of the practices when I lived in New York was to go to some hunting resort and not only hunt animals, but hunt sex slaves. So, no doubt that sport is one of them. The sporting part of this can get quite gruesome.

Prototyping is another one. As these technologies, particularly electromagnetic weapons and mind control, are rolled out you will see an effort to prototype things. The Department of Justice and DOD entered into a memorandum of understanding in the early 1990's for the Department of Justice to take nonlethal weapons developed by DOD and their weapons manufacturers and contractors, and prototype those for domestic application.

Gloria Naylor was a very famous accomplished African-American author who in 1996 was targeted with these weapons, including the weapons that can insert thoughts into your mind. Part of her challenge with understanding what was happening was that she couldn't fathom why someone would target her.

If you look at what was going on at that time, I absolutely can understand why they would target her. They were very concerned about the disclosure of CIA narcotics trafficking, and leaders in the African-American community were targeted.

A process was underway to move African-Americans in mass out of poor communities and gentrify. I often tell the story of the Clinton Administration Deputy Assistant Secretary at HUD saying, “We’ve given up on black people, and we are moving them out and bringing the Hispanics in.”

So, if you needed to prototype these weapons on someone, and if you wanted to pick them out; picking out people who were very admired and respected in that community who would have been able to really turn opinion against you was a very logical conclusion. Of course, she didn’t understand how the money worked or the politics or see the game; she was busy writing books about intimate space and non-political things.

She was targeted, and finally wrote a book called *1996* about her experience, which is somewhat of a fictionalized version of what happened. It is very useful to understand the technology, but she was a prototype. I am convinced of that.

Political control is something I have mentioned before – rigged elections. I think that most of that gets back to controlling the money and financial flow. Sometimes it doesn’t; it just has to do with raw power.

Depopulation is increasingly one. You are trying to quietly and slowly make people infertile, or quietly and slowly kill them. You see it happening around the world, and it could be a slow economic kill, but it could also be physical or both.

Then there is **genocide**. Look at Libya; that is a perfect example.

I am told by friends who know much more about Israel than I do, say that there is a quota of the Israeli army to kill a certain amount of youths every day. It’s clearly a slower kill, but what they are doing is systematically genociding a population if that is true.

We have looked at the perpetrators and we have looked at the goals so, let’s talk about the **targets**.

The targets can be everything from an individual to a country, although if you look at what is going on now, I am beginning to think that it includes planets. So, you can target an individual; you can target an adult – either personally or professionally or both – or you can target a child; you can target a family or a homeowner; you can target a community; you can target a company; you can target a cluster of companies, even an industry; you can politically target a county or a state or a country.

It is critical to know who the target is if you are dealing with deep state tactics personally because often, you may be in the cohort or in the community or in the country that you are not specifically targeted, but you are associated with a jurisdiction or someone who is a target.

For example, during the litigation they kept trying to make sure that my friends or my family believed that they would become a target if they kept associating with me. So in that case, they weren't a target, but they were just trying to be peeled away from the target.

As another example, I live in a rural community, and there is a real effort underway in the United States to run the middle and lower classes out of the rural communities and into the cities, and then preserve the land for large land owners. The ownership of land by the wealthy –by the 1% - is increasing dramatically.

These places may also want to put in new infrastructures such as high-speed trains, which is part of the debate about what is happening in eastern Australia and California. So, they want to see the populations there either die off or move into the city.

You will see in the rural areas the phone service is unbelievably poor. That is what I am experiencing, but if you look at the articles or the reporting, all rural areas are dealing with horrible phone service. Of course, it makes the cost very expensive.

I should be paying approximately \$2,000 a year for what we have in Hickory Valley, and I am paying over \$15,000 because I need such a redundant phone and internet services to ensure that I have access. Of course, all of that is very time-consuming.

Another example is, if you look at the training requirements for anybody who serves in a City Council or volunteer fire department, the training requirements are exploding. I suspect that some of that is to try to make it harder – if not impossible – to have a volunteer fire department, which you have to have for insurance. Of course, what we see in California is that they are cutting off insurance, they are cutting fire services, and they are cutting municipal services. Some of that is financial, an inevitable part of all the different ways that the money has been drained during the financial coup d'état.

If you are dealing with these tactics, it is very important to understand who the target is. If you are in a jurisdiction that is being targeted by this, and it is inconceivable to you being the target, remember that you may not be, but the cohort that you are in may be. That is why these things are happening, which makes you and your life seem very incoherent.

Let's turn to **primary kinds of tactics**. There are millions and billions – if not trillions – of tactics. I only want to look at some of the big groupings.

Violence is a big one, although they try to keep violence more invisible these days. Violence tends to make what is going on too obvious, but you have local gangs and stringers.

Let's say that you want to do a professional hit on somebody, but you want to make it look like a street crime. In my experience, most of the gangs and stringers are very much on the leash. They do what they are told, and they are remarkably obedient. So, there is not a great deal of free-range street crime coming from bottom-up incentives. Those individuals are allowed to exist and are encouraged to do and behave in certain ways. It could be a very professional hit, but I find those to be relatively unusual.

On a professional hit, it's good to make it look like a suicide or a natural death, so you have poison and biowarfare and fast-acting cancer. Many times mind-control can be involved. If you do a professional hit using somebody who is a mind-control agent, I suspect that many of the youths in the school shootings are not the shooters; they are the patsies. You have professional shooters in and around them, but many of those children have been mind-controlled, whether it's to be the patsy or to be the assassin.

Electromagnetic tools are very helpful so that you can hack somebody's car. There is enough suspicion that the death of Michael Hastings, the reporter who was writing about CIA narcotics trafficking, was killed in a car accident. That could have been hacking of the digital systems. We have many allegations about hacking of planes and remote-control hijacking of planes with the digital systems.

I have experienced it, and many people in my situation during the litigation have experienced electromagnetic weapons used to, not just hack digital systems in a car, but to physically move the car, cause a car accident, or cause a skiing accident.

I had a serious bike accident resulting in a concussion, and I was in bed for a week. I suspect that it was an electromagnetic weapon. I was riding my bike, and was where no cars are ever parked. There was a car parked, and I remember thinking, "That's odd." There was a man standing there, and lo and behold, I was riding down and suddenly the front tire of my bike turned 90 degrees for no reason. The next thing I knew, my head hit the concrete.

I remember meeting with a woman from Montana who had worked for the government protecting the national parks, and she had a car accident engineered with electromagnetic weapons. That was clearly what the pattern looked like. She almost lost her life, but she made it. Someone else had the same experience in that place and had died.

Another one is **elective surgery**. If you read Peter Janney's book, *Mary's Mosaic*, he has a reference to it. I've heard numerous references from people who worked in covert operations.

I remember when Joan Rivers died during what should have been a minor elective surgery. I remember looking at it and saying, "Oh my God! She's been assassinated," because elective surgery is a known tactic, and it wasn't until much later that I realized what she had said about the Obamas. I thought, "Now it makes sense."

False flags are an increasing part of the use of violence. Sometimes it's violence, and sometimes it's a reality TV show where they stage what was supposed to have been a violent event, but it's fake.

Richard Dolan has a fabulous series on false flags, and I've been hoping that he would write his false flag book. Remember that one of the sensitivities, is that there always seems to be an enormous connection between false flags and training exercises by the government. Whenever you see a training exercise happening, you want to be aware.

So, those are some mentions of different kinds of violence. Increasingly, I find that violence is made to be invisible, and that is one of the reasons it is so hard – whether it is electromagnetic weaponry or mind control weaponry or poisoning – to determine what is happening because it can be made to look surprisingly natural.

Financial and legal tactics are an endless series of tactics, so you have income and expense manipulation, you have financial fraud, and obviously, you have legal enforcement and intimidation and fraud.

Whisper campaigns are a big one, and **Fake news** is another. Increasingly, weaponizing the population with **snitches and false witnesses** are a big problem.

Obviously, another one is **turning your family and friends against you**. It's amazing what can be done.

Buying people away was a big one that I dealt with all the time.

Isolating you is an additional one.

I am very concerned, as you know, about the *Kingsman* technology. If you haven't watched the movie the *Kingsman* or the movie *The Cell*, it will show you the idea of using populations as weapons and using cell technology to do it.

I believe that in Los Angeles, Seattle, and San Francisco much of what people think of as homeless are not homeless. You have drug-addicted armies that are being monitored and managed with cell phone technology, and they are basically being used to drive out the middle-class and ultimately, once they have finished driving everybody out, they will disappear or have a dramatic die-off. There you go, they will be able to **reengineer**.

There is a great example of a **legal and financial** targeting of a Canadian insurance company called Fairfax Financial Holding in one of Matt Taibbi's recent books. It's a great write-up of how these things work.

There is a TV series called *Billions* about a hedge fund operator who is doing some of this. You can see those financial and legal frauds and targeting in there. The targeting of Hamilton Securities is obviously another great example because it went on longer than Fairfax Financial, and you can see how that works.

The primary advantage of the **covert operators** is that the general population rarely can see the game. That has made these operations much more profitable, and that is why I think if we can see and understand the game, we can create a greater immunity system.

The challenge for many of us is that we don't understand the technology and how it can be applied. For example, one of my more bizarre experiences during the litigation was invisible man technology. I had somebody follow me in San Francisco. When I flew in, I had been followed at the airport. Then the next morning, I got up and went to the meeting in an office building next to Bryant Park. I was followed in the morning by a different person who looked like a clear organized crime stringer who works for the defense contractors.

I came out of the building to get coffee during the morning, and I went to this wonderful coffee shop on Bryant Park, and he followed me out. But when I left, he went ahead of me. Obviously, he knew where I was going; I was going back to the building where I was in a meeting.

He turned the corner, and five seconds later, I turned the corner, and he was gone. There was no place for him to go. There was no door that he could have walked through; he was just gone.

I remember calling somebody who used to work in covert operations. I said, “Do you guys have invisible man technology? Can you just push a button and have somebody disappear?”

He said, “Yup.”

That doesn't make it so, but I had that and a couple of other experiences that I can only explain by invisible man technology. So, “Beam me up, Scotty.” Your life gets much more complicated when you realize that technology probably exists.

We don't understand the technology and we don't understand the invisible man technology and we don't understand the EMF technology. So, whether it was the bike accident or whatever they were doing in Washington, and that crazy electromagnetic weapon they put in the building – they probably weren't using it; that was only to get me to run around and look stupid – we don't understand how that technology has worked and how to avoid it.

Poisoning and fast-acting cancer we don't fully understand. We don't understand how poisonings get delivered. It's very hard to prevent it.

The thing that we most need to understand if we want to see these tactics and protect ourselves is, to map the money and the legal and financial incentives around us.

Learning about **how the money works** around you, whether it's in your industry, your business, or your community, is a learning journey; you just start learning. It's amazing if you learn a little every week or every month, how over time things accumulate. Suddenly, the world stops being as incoherent as it was, and things start making much more sense.

We haven't found a way to **build trust** – to free each other from our control files, to free each other from conflicts of interest – and start to build circles or small groups of trust of people who will really help protect each other and watch each other's back. That is what we need to have.

I was always amazed because when I first left the establishment, I discovered this pejorative term called ‘conspiracies’ as though it was something bad. In my life, until I left the establishment, conspiracies were the fundamental operating organizational principle of getting anything done in this world. By ‘conspiracies’ I don’t mean illegal conspiracies; I only mean a group of people getting together, quietly keeping it to themselves, and making a plan and executing it. Most are more transactional or political, but that is how you invented and created your world – through conspiracies.

What stunned me about leaving the establishment is that I entered a whole group of people who don’t think that way and aren’t trained that way and aren’t transaction-oriented, so literally, they have been made powerless to invent their world because they don’t know how to start and create successful conspiracies, including transactions.

So, that is why at the end of *The Solari Report* I keep saying, “Don’t worry about whether or not there is a conspiracy; if you’re not in a conspiracy, you need to start one.”

It’s very interesting that at all of the *Solari* events, you are not able to bring your smartphone. You have to leave your smartphone in the car, or you have to put it into a bag to keep it away. You have to turn it off and leave it in the car. I have a huge ‘food fight’ to get people at the *Solari* events to understand that if they want to bring in a microphone for the NSA (National Security Agency), or whomever, it is going to be a different conversation than if we have a private conversation. It’s one of the reasons I try so hard to get private rooms. It’s amazing how many restaurants will tell me that they have a completely private room, and then when we show up, it’s not private at all; it’s open air to the bar, open air to everybody else, it has a TV that is hooked up to cable, and it’s not private at all.

It’s very, very frustrating, and this is real; your data has value. Think very carefully about who and what you give access to.

Some more challenges are that we need to **understand the history** of what we are likely to experience in the future. If you haven’t, you can do this on Wikipedia: Read the history of Operation Gladio, the Phoenix Program, and COINTELPRO. These are historical examples where people or communities or groups have been targeted in very institutionalized and systematic ways. This is what you get when you have real change in control and change in government, and the consolidation of the financial coup throughout the developed world is no different.

These things are likely to be much worse in America than in Europe, but anywhere that the war on terror has been, that was the point of the war on terror – to make it possible to do a much more invisible form of Operation Gladio or Phoenix Program anywhere in the world wherever you want it in combination with financial controls and the digital systems. That is why it is best when you are given an official story on events by a large government or corporation or media to assume that you do not know what is happening until you map out the parties and how their money works, and establish that there is no covert side or goals.

If there is a covert side, it often happens that the official story is something you cannot and should not rely on. Mapping out the mathematics of the time and money involved can really inform, protect, and save your time and money.

That's it on covert operations. Familiarize yourself with the perpetrators; familiarize yourself with the goals; familiarize yourself with the targets. Remember, you may not individually be a target, but you can be in a cohort that is. As far as the tactics, the movies are really great for helping you see and understand how the game works.

Let's turn to **Targeting of Children**.

I want to talk about children in six areas. First, I want to talk about **breeding**, then **selection and monitoring**, next **manipulation**, after that **trafficking**, then the **economic model**, and finally, **take action**.

1. Let's start with **Breeding Programs**.

If you've ever spent any time as a farmer or a rancher or ever studied livestock management, in one respect the management of people and people as human resources instead of as people, there is a great amount of similarity between livestock management and how society is managed.

The first thing to understand is that the breeding and management of DNA is very important. The leadership puts considerable store in the quality and nature of DNA. Just as a horse breeder or a dog breeder would care about breeding lines and DNA, so does the leadership when it comes to the creation and bringing up of children. There are multiple breeding programs in play on Planet Earth and have been for centuries. I can't begin to understand them; I only know snippets from my personal experience and what I've been told by people I trust. When you combine that with some research and intuitive guesses, you get a picture.

Take this with ‘a grain of salt’ because there are things that I am going to say that I couldn’t prove in a court of law, but I’m quite confident is true.

Let’s talk about **DNA**. First of all, there is plenty of lore, and you can find it in many books and on the internet about a concept called **blood liners**, and what I can tell you is that phenomenon is true. There is great stress that blood liners are real, and great stress is put on blood liners. Blood liners consider themselves very different than non-blood liners. There are many different theories on why this is so. I have no idea what the truth is. I know it’s real because I’ve experienced it a great deal, but I don’t know what the source of the bloodline is versus non-blood liners. Feel free to dive into the myriads of theories, but I’m not going to go through them now.

One is that they connect to the blood of Jesus or the house of David, and that relates to the nature of genetic memory as well as certain skills and abilities, including the ability to resonate with each other. So, blood liners have a higher resonance with each other than with non-blood liners. That is part of what I have experienced.

It’s a very real phenomenon, and it is one of the reasons you see two sets of rules. There are different rules, and the management of blood liners is different from the management of non-blood liners.

Second, there is active thinking about proactive management encouraging certain couplings. So, this idea of, “So-and-so is encouraged to marry this person as opposed to that person,” very much has to do with the management of DNA and bloodlines and feelings about all of that. Part of it is based on an understanding of what produces certain kinds of abilities and talents or preservation of certain bloodlines or certain strains.

There is also such a thing as a special breeding club. I think that most of you have probably seen the movie *Rosemary’s Baby* where the husband encourages his wife to participate in an occult ceremony where she has intercourse with – in this case – a nonhuman. In my experience, it’s always a human. But basically, the wife is offered up as a breeder, in essence, for the creation of a child who has a different father. As a result, the family gets a multitude of different professional or social favors, and they move up the ladder. It’s something that families do to move up the ladder, and you will see children of aristocrats or royals or various people in more middle-class families, and sometimes they are placed through adoption.

For example, when I was at Dillon Read, it turned out that Clarence Dillon's son, Douglas Dillon, who later became Secretary of the Treasury, had been adopted when Clarence was in Switzerland with his wife. So, the question always was: Which royal family or which aristocrat had really produced Douglas? Where did Douglas come from?

The special breeding club is very quiet and very invisible, but it is also very real.

I also believe that the technology exists to mix DNA so parents can have children who are their own, but there is more DNA inserted in them. There is big debate about the technology of how it's done. There is also artificial insemination. If you watched the movie *Hanna*, you will see children bred for special qualities. **Artificial insemination** is used as genetic engineering of people.

Everyone knows the story of the virgin birth. I suspect that was genetic reengineering.

Breeding children in **underground facilities** is another thing. Scores of problems have occurred from using children for covert operations and pedophilia in a variety of ways. I suspect they are breeding children in underground facilities or shipping them in from Latin America or Eastern Europe. They have different ways of culling populations. When you see disasters like the Indonesian tsunami or Haiti, then you cull the population, and those children are trafficked in a variety of different ways.

I think they have been doing cloning or special breeding programs in facilities like that so they can get children without having the mess that is caused by culling them out of the regular population. There are all sorts of problems when you traffic the children out of their regular backgrounds.

It wouldn't surprise me if some of ISIS fighters were super-soldiers created in this way. They are **prototyping** the use of them. That is one of the reasons for covering their face and gloving their hands. Another reason is that the color of the skin is not appropriate for the area they were supposed to be from, but it wouldn't surprise me if there was some super-soldier prototyping in that.

There is a professor from Temple named David Jacobs who is a very serious, competent man. He has written seriously that he believes we are targeted by **hybrid breeding** programs by aliens. What I believe, although I think that Jacobs is quite intelligent and quite sincere, is that it is a cover story for deep state breeding run by human elites. Partly, it's because I've never met an alien abduction story that couldn't be explained by black budget and mind control.

However, I say that all across the country – I went through a period from 1998 to 2008 where I drove extensively, 100,000 miles or more a year in many of those years – and I would see the same child all over the country. It was almost as though a father had traveled across the country and inseminated thousands of women and basically, produced almost the same child. It was like a replica.

I would refer to them by modes. If you have ever seen *Battlestar Galactica*, the TV series, they have different ‘models’ of cyborgs. The most common one I called ‘Jason’, because they all looked like a young man I knew at the time.

I thought, “How does this work? Is this done by artificial insemination, or is it just something that happens in the field through biophysics? Is it part of the intelligence code in the field, or is it artificial insemination? In other words, is it hardware or software? How did this happen?”

If you’ve never studied the phenomenon of the **Indigo Children**, I would suggest that you do. That is another possible variation on this. The Indigo Children are very high-minded, very, very talented children with a particular look. They tend to be light in aura and blond – very Scandinavian-looking. They are a similar phenomenon to what I was running into.

The other thing you will see is that the same person **reappears** throughout history. Certain websites show old-time pictures of people, along with current celebrities. I’ve run into this before where people I know turned out to look exactly like somebody who lived 200 years ago. Not only did they look exactly alike, but the description of their character is exactly alike. That could be explained by **genetic engineering** through time. They are trying to recapture and reuse a certain kind of DNA.

I think that one thing that does happen is **babies being switched** at birth. So, if they want to get a certain child into a particular situation and can’t do it through adoption or through an agreement with the family, you will see babies switched in the hospital. That is one of the reasons if I had ever been able to have a child and keep them safe, I would never have had a child at a big hospital. There are too many ‘spooky’ things going on.

The thing to understand is that there are tremendous thought and micromanagement very invisibly done of the breeding stock. Think of it as a farmer who is breeding chickens and trying to optimize for their various positions.

1. Selection and Monitoring.

You wouldn't believe how closely the blood liners are monitoring; it's quite extraordinary. The planning that goes into where you go and what you do, and making sure that you are groomed and developed and use this skill and that skill is extraordinary. If you've ever seen a rancher with a prize bull, you will know what I mean.

The monitoring is much more intense than most people realize because the leadership thinks very strategically about investment in human and intellectual capital. One reason for being careful of what data you provide and allow getting into the database is that this is happening. If the farmer's goal is different from the chicken's goals, bad things can happen. If you are smart, you get culled out to go to Harvard. If you're pretty, you could get culled out to go to parties at the White House for pizza. If you are expendable, you could get picked out to be shot in a drive-by shooting in Chicago to generate \$1 million of harvestable organs.

Particularly, because we are going into a high-tech, almost medieval period, you want to be very, very careful about where your data goes.

2. Manipulation.

If you haven't seen the Klinghardt video, it's an eight-minute excerpt from an interview with Dietrich Klinghardt, who is an absolutely fantastic doctor. It's in the *2019 Annual Wrap Up, Deep State* website. So, it's www.DeepState.Solari.com. It's in the *Top Videos*, and I think it is also in the *Food & Health* section for the *4th Quarter*.

The eight-minute video is really about all of the different things that are happening, from fluoride to global spraying, etc., to cause our **pineal glands** to be suppressed, which is really part of what gives us consciousness and all sorts of extraordinary intellectual and even telepathic capabilities. It's very important to watch that because if you look at what is happening to children physically, – particularly in America because I think that America is much worse and much tougher on children right now than most countries – this kind of suppression is definitely happening.

What Klinghardt is careful not to say is that it is intentional. He leaves it open for the listener to decide, but it's very hard to come to any other conclusion other than it is intentional.

You should watch that because it informs you why it is so important to protect physically against that which we have the power to do.

Vaccines are a very important way of manipulating children because of the heavy schedules that are being promoted in the United States, and heavier schedules around the world. One subscriber sent in an audit that his pediatrician had done of the patient who he had seen in his practice, and the incidence of autistic children related to vaccinations was: One out of 715 who were not vaccinated had autism, and one out of 400+ had autism who had been lightly vaccinated, and one out of 45 who had the heavy recommended schedule of vaccines.

One of the mothers in *Vaxxed* said that the cost of having a heavily autistic child was a present value of \$5 million. What I've seen is that a heavily autistic child destroys a family. They destroy the lives of the sibling, they can often destroy the marriage, and they destroy the opportunity and possibilities for the parents.

You wonder as you watch what is clearly an engineered epidemic, what the goal is. Is the goal to create enough autistic children to get geniuses created with special talents? I think somebody said that one out of every 3,500 autistic children, you create these special kinds of talents. That is one theory, but who knows?

Of course, one of the things that I believe is that the vaccines are creating children who are much more likely to resonate with machines than with other people and other living things. So the question is: What is the goal? It's clearly intentional, and it is clearly being engineered. There has to be a logical explanation. Usually when it's something this significant, there is a stacking of function.

The reality is that if you are a parent or a grandparent, do you want to face a situation where, not only are you going to allow your child to be destroyed, but it could be your whole family being destroyed?

Pedophilia is much more common than people understand, although it is becoming more understandable recently. What they are pushing for over a long period of time is to make pedophilia legal, so there is a great deal coming out of the closet about this. That is the goal of where they are going. If you look at some of the sex education materials in places like California, they are unquestionably the same ones that the agencies used to teach sex slavery to youths. So, in high school they are being financed with your tax dollar to teach your children how to be sex slaves. It's bad, and it shouldn't be permitted.

The **secret societies** always had their tradition, and it was done for a combination of reasons. One was obviously, personnel benefits. One theory was that if you had oral sex once a week, it was great for your health. It was a ‘personnel benefit’ and part of your preventative healthcare. You also had a control file on you, obviously, if they got pictures of you sleeping with children.

I’ve watched people be blackmailed over pedophilia, and you’ve never seen a more terrified human being. They are more terrified than even if you are going to kill them. You take somebody beloved by his large family and beloved in the community, and you threaten them with those pictures circulating, and you can’t imagine how that impacts them.

Part of the pedophilia and part of the occult rituals where they kill children, is to create a ‘we’. It creates a covenant because we are all guilty in the same crime, so we all have to ‘toe the line’.

If you ever been around the people who have been part of the Kennedy assassination, they had that same sort of ‘occult we’. They were in the club, and everybody else was forever out of the club because they hadn’t been in on the deal.

The other thing to understand about pedophilia is that it’s a way – and this gets into the very high secret societies – to create intergenerational loyalty by imprinting. If you ever talk to a farmer who holds puppies when they are born or holds a calf when it is born or holds a horse when it is born, it’s a way of imprinting them. This is a form of intergenerational imprinting; the idea is that it keeps loyalty.

If you look at these intensive personal habits, I’m thinking more and more with digital technology that they are believing, “We don’t need to do imprinting; we can just chip them.” I think you are seeing a profusion of chipping of children whose mothers don’t even know they are being chipped. The husband is in on the deal, but the wife isn’t necessarily.

Children are suffering from the **food**. Read and watch Robyn O’Brien’s or Jeffrey Smith’s work. My fear is that you are seeing many things being put into the food that is really having a dramatic impact on juveniles’ sexuality. Youths think that they want to transgender because they don’t realize it, but their ‘biowarfare burgers’ have been giving them an invisible hormone replacement therapy.

Mind control is a big one. In the past it was individualized. If you are interested, go back to *Control 101* and read some of our recommendations like *Secret, Don't Tell* by Carla Emery. I think that is in the *2019 Wrap Up, 'Books for 2020'*. Now with digital technology, you can do a lot that is not only targeted at individuals, but is done to a general group or audience. My understanding, although I don't have really good intelligence, is that once it took 100 or 200 or more hours to teach a child to do covert operations with mind control, now with the new technology, you can do it very, very quickly.

One of the questions that I am sometimes asked and I sometimes think about is: How did American leadership get so dumb? One of the things is that when you look at children who go through this kind of training early on; one of the ceremonies that I went through – and I suspect that many people went through – is called 'Turn your heart to stone'.

It sounds very occult, and it feels very occult when you are there. But you are a tiny child, and suddenly, you are facing a dagger that looks bigger than you are. They cut a cross in your chest with the dagger right above your heart. You go through this ceremony, and what you will see in a variety of different people – and Condoleezza Rice is a perfect example and Hillary Clinton is another example – is that these are obviously very intelligent people, but they are remarkably stupid. You can't believe some of the things that they say; it reflects a complete absence of emotional intelligence. They can't understand people. They can't feel them or feel the morphogenic field, and it makes them phenomenally stupid.

Because we are living in a **Federal credit bubble**, the information that they get back from the financial system is also grossly oversimplified and reflects a bubble. It doesn't have people think or feel. If you were in a market economy, they would be getting a wealth of highly complex information. But when you are in a Federal credit engineered economy, you don't. So, you get these high-level people with extraordinary academic backgrounds and degrees who are just absolutely phenomenally stupid.

There is a scene in *The Crown*, which is the Netflix series on Queen Elizabeth, who has clearly been bred and trained to deal with unbelievable stress and operated at a very high level of responsibility, as well as being called upon to be a symbol. It is an extremely difficult job because you don't have the option of quitting – especially because she became queen because Edward abdicated.

There is one point where she says, “It’s like I have a piece missing. I just don’t empathize.” I suspect that she probably went through some kind of ceremony or training like that. She may or may not remember it because it happened when she was so young.

It turns people ‘Spock-like’. Because of the stress and information that you handle, but also because of that kind of training, the leadership can seem remote and distant. One of my questions is: Is the DNA specifically designed and bred like that so that it’s a combination of the training and the DNA?

These people have a strong ability to stay calm and rational under high stress, but it also means that they get cut off from an enormous amount of intelligence that they need to understand the world they are leading and to do their job. So, you get this rather ‘idiot savant’ kind of situation.

A good book on this is *Secret, Don’t Tell* by Carla Emery. It’s the best one-stop history of mind control. The kind of mind control that secret societies have been doing has been going on for centuries and centuries. This is very old, but no doubt, that the Nazi research and then the US intelligence agencies and black budget people took it to a whole new level. Then you add digital technology, and you are ‘off to the races’.

The Minds of Men does a great job of taking it from the end of World War II into the 1970’s. That was the Documentary of the Year last year from Truthstream Media. If you haven’t seen it, you won’t understand the modern world unless you crack this.

There are many movies in *Control 101*. We have a *Solari Report* on mind control and a *Solari Report* on entrainment.

Obviously, this all goes to an entirely new level when you get smartphones and vehicles online where you can addict children with videogames, gambling, and other activities where you deliver the addiction.

I put up a video recently where the videographer interviewed three generations on what they did when they were young, and the first two generations were outdoors all the time. The last generation was always indoors doing video games and other things. They were resonating with the machine instead of resonating with the trees, the birds, the sun, and all of life.

I recently met with a wonderful group of people, and one of them was very concerned about a grandson who had a serious video game addiction and was running into real trouble. So, I put up a commentary on all the book reviews, and some of the videos and the *Solari Reports* that we have done that relate to the kinds of technologies that are used to addict children. That is on the home page now.

Part of the challenge that parents have in dealing with it within a family is if you have two parents and four grandparents, one person understands the extraordinary danger presented by technology – whether it's the addictions that come from these activities or your exposure to connect and be used and manipulated, essentially, by criminals or organized crime. Maybe one out of a group of six understands the risks, and the others can't even fathom the risks. So, part of this is getting all the members of the family educated to what is happening.

I've seen families where **entrainment** is being used to get children to want to be transgender when all the drugs and surgery can permanently do real harm to their body. The decision is being driven by entrainment, not by any real internal need from what I can see. Or I have seen where children are being encouraged to commit suicide; there is a huge push.

I think that part of this is prototyping the technology to make sure that they can really use it to control.

One of the big problems that the leadership has always had is that they could never bust a mother's love for their child, so their control would break down, and that is why they lost on homeschooling. That is why they have lost on a considerable number of vaccine issues. They can't get the mothers to do something that is inhuman.

I was at Franklin Sanders' farm about four or five years ago, and he was quite down. It was unusual because he's a fairly 'up guy'. I said, "Franklin, what is the matter?"

He said, "I don't know if you've noticed this, but there are all these women who are just arbitrarily – for no reason –killing their kids. It's like an epidemic."

I started to look up the situations and the stories, and it appeared that they were prototyping the technology to finally be able to bust that link. Gruesome as it sounds, there is always prototyping going on, and that is what that sounded like.

I always get a little spooked for a few reasons when somebody tells me that they are taking their children to a Disney park or Disney World. One is that there have always been plenty of rumors about things going on at Disney, and there have been arrests of people engaged in pedophilia networks connected to the Disney operations. I spent an afternoon once with someone who ran the Lockheed installation next to a big Disneyworld location, and basically, they explained to me how the military was making all of this software. When you look at what he was saying, along with the rumors of the software and the virtual reality and all this being used for mind control, I have always avoided them.

Then it came up again, because if you look at the ABC network censorship of the Epstein story for three years, I am highly confident – based on my understanding of Disney – that if ABC spiked the Epstein story for three years, that was very likely coming from the chairman of Disney.

I once had dinner with a woman who had been the assistant to the chairman of Disney, and every afternoon she brought him the headlines from ABC, and he would mark up and edit the headlines and cut stories. So, there was extremely tight control by the Disney chairman of every headline that ran on ABC.

You ask yourself, “Why is a corporation that essentially has children as their target market spiking the Epstein story and protecting what is now considered to be the most famous pedophile in America?” It makes you wonder.

I always get nervous when people say that they are going to a Disney park.

Education and art and entertainment. There are quantities of propaganda to educate and steer children in a certain way.

I never read or watched any of the *Harry Potter* stories. We have a wonderful subscriber who talked me into reading the first book, so I tried to read the first book. I was about halfway through and decided that I couldn't do this. So, I switched to the movies. I've watched two, but it is very interesting because in *Harry Potter* there are the wizards and the muggles, and your families are the deplorables; they make your families out to be deplorables. Then there are these wonderful, magical wizards who run the society and really know what is going on and have all of these great powers.

You are left with the craving of inclusion by the elites, and looking down on the parents who are working themselves into the ground to support you and make sure that you have opportunities in life. It is a very cruel picture.

It reminds me of a video that was ‘spinning’ around on CNN. You had three people on CNN talking about people who live in rural areas and making them out to be ‘muggles’. They didn’t use that exact word, but they were talking about them as though they were subhuman, and there are tremendous amounts of propaganda to do that because you are trying to clean out the rural areas.

Remember: “Before I can kill you, I have to kill your name.” So, before I can do all these hideous things to force people out of the rural areas – burn them out of their houses and cut off their water so that their farms fail and on and on and on. It really helps if I can sway the majority of the population that they are deplorables; that is all part of the propaganda.

It’s amusing because speaking of smart and stupid, I’ve often said that the people in Silicon Valley may have an IQ of 150, but they are swimming in a sea of black budget technology and Federal credit subsidy, so they don’t know how to run a real business where you have to sell it for more than you make because they’re not dealing with real economics or fundamental economics. As a result, they may have an IQ of 150, but they’re not as smart as the people in Hickory Valley. There are people in Hickory Valley I’d put up against them any day of the week because the best of the best here have made it in an almost impossible economy for 50 years, and they are ‘smart as a whip’.

Education very much depends on how you are selected and tracked. Some are tracked into be smart as a whip, and some are dumbed down. It is very *Hunger Games* how the educational tracks work. I find it much more human in Europe than here.

We have reached a point where it’s incredibly important for every child to be informed and say, independent of the educational system, “What do I want to accomplish in life, and what are the skills that I need? How do I get those skills? And price this out according to the value of your time. You will see that we have an education establishment that, if you get slipped into the wrong track, it is basically designed to waste your time and keep you stupid – or partying and paying a large amount of money to educational institutions.”

“Be very, very careful what track you get on, and you have to take independent mastery and control of your learning plan – whether it’s for you or your children or your grandchildren. The family and the individual need to have superior independent plans.”

“I’m the chairman of the board of my education. I’m responsible for where I go, what I do, and how I’m going to get it. I can’t depend on the educational system to do that.”

The beauty of smartphones is that you can manage all of this on a one by one basis. I can have the equivalent of 24/7 Stasi teams (German State Security Service) on every person very economically because I can do it all with AI and software. It's incredible how far it's come in the last 20 years. That means that I can absolutely, with the smartphones, encourage the behavior in the person that I want them to evidence. So, if I want them to go into the powerless track, I simply teach them how to behave in a way that is powerless. So, I get them to be self-centered, I get them to think emotionally, and so on.

I have one colleague who calls them the 'fourth chakra people' because everything is from the heart, and they are so easy to trick. They don't understand math, and the victim mentality is such a big thing, or they have drama queen mentality. All these things teach people, both how to behave or develop habits that make them powerless, but it makes it very difficult for them to organize and operate and create and gather power with other people.

The beauty of the smartphones is that you can fundamentally set up a very low-cost plan to mind control, train, and manipulate each person one by one. Think extensively about exactly when and how you need a smartphone because they are dangerous.

1. Trafficking.

Trafficking is very real. When I was driving around the country in the late 1990's- between 1998 and 2008-I basically found that \$30,000 to \$50,000 per child was what you could get to kidnap and traffic a pretty young child for pedophilia or other purposes. You would literally see places where you have a rural or private airport where all the private planes land. They auction off the children, and they're gone – including out of the country.

I did a great *Solari Report* with Jon Rappoport on pedophilia and collected profusions of the best links and sources. There are a couple of documented cases, and those cases help you to understand the phenomenon. One of our subscribers made a movie called *The Finders* which is excellent, and I strongly recommend that you watch it.

If you are interested in trafficking and pedophilia, I would absolutely check out that *Solari Report* with Jon Rappoport.

One of the challenges that you see around the world is that part of disaster capitalism is going in and culling out all the 'pretty' children and shipping them off for various functions including pedophilia and sex slavery.

It's one of the reasons you will see increasing effort by a country that has been hit by disaster capitalism, having a war with certain Western contractors.

The use of children in organized crime and covert operations is very, very serious, and it is very old. This technology was said to come to the Western world through the Assassins. When the Templars went to the Middle East, they discovered societies that were cultivating young children growing up in the palace and then mind-controlling them. If they would go out and do the killings, they could earn their way back into the palace.

The CIA ran mind control children for their many different functions. There is prostitution, couriers, fall guys, and definitely assassination.

Imagine a little child who is trained to kill who can get in and out, and no one could fathom that the child did the hit.

All of those children in the school shootings, I suspect, have been mind-controlled. They are there, not to do the shootings, but to be the patsy, although some of them may do the shootings. I think that some of the false flags in the school shootings are clearly staged. But the ones where they are shooting the small children, I think the juvenile shooters are set up to be patsies.

Usually, you have professional shooters. If you look at Columbine, it appeared as though you had a couple of professional shooters doing the real shooting. The youths were doing some of the shooting, but nobody was depending on them to get the shooting done. They make great patsies and 'fall guys'.

The narcotics trafficking, obviously, has depended for generations on young people doing most of the street dealership.

It's ironic because, if you look at what an important industry narcotics is, it's not only for the money but for the control of people and the control of neighborhoods. It's somewhat the neighborhood leverage buyout.

It is always strange to see something like running across the borders with the help of the military, with the help of enforcement, and it is big top-down business. Of course, we are attributing all of it to black teenage boys and Mexican boys to blame, right? You just can't make this 'stuff' up. The Masons run the low-marking businesses and the black teenagers run the high-marking businesses. Got it?

I think they have been bringing in many children from Latin America or Eastern Europe – whether here or in Europe. It's much easier shipping children from these areas. You get far less pushback from families. I think that cloning is going on in the underground bases.

Many of these operations are underground bases or very private estates with large landholding so it's out of sight. The more that you can bring in children, cull them out of disaster areas, and bring them in from far, far away or use cloning, the more you can avoid the problems of the unhappy families and children.

1. **Economic Model.**

Back to understanding farming and ranching and the livestock management, the biggest problem in many parts of the world is that a community raises the child, feeds the child, teaches the child, pays for their education – whether through tuition or taxes – and then the child leaves. They go into the military or go to work for the big corporations. They go to work for the banks or the government, and never stay in that community and repay the equity. They don't start businesses, build businesses, and if you look at the living capital and the financial capital, it's an unbelievable drain on communities. It's part of the negative return on investment because the taxpayer money and the government money are helping to engineer it.

You have the complete society working hard to educate their own, and finance their own economic demise. We are financing something that is destroying us.

We are also paying taxes to a government that is mandating things that are harming the children – putting fluoride in the water, heavy schedules of vaccines, and mandating certain kinds of education, which are nowhere near the quality of education that we could provide for the same amount of money. And they are mandating the draft.

One of my concerns is that we are going to see a draft before too long in the United States. So, we are financing the government, but the government is then mandating things which destroy our personal community or local economy and can be very, very harmful to our children.

Among the food policies, the vaccine policies, the fluoride in the water policies, and the global spraying, you have a series of things that are causing your children to not be healthy. It's causing them chronic disease, and is causing you great expense. It goes on and on.

Essentially, we are financing the destruction of our own families and the health of many of our children. One of the reasons that this is going to come down to having to deal with the money and what we are financing – whether it be private corporations or government – is that we are going to have to stop financing it if we want it to stop.

1. Take Action.

The question is: What are some of the actions that you can take? I'm going to write much more about this in the *Take Action 2020*, which I will write up and produce after I get *State of the Currency* off to the printer, but let me just mention a few.

First of all, **beware of DNA testing** for you and your family. If you want to do this kind of testing, try to find a clinic in a jurisdiction which permits privacy. Ideally, you do the test and keep the files in a pseudonym. I think that this kind of testing can be very, very dangerous.

Number two, **complexity**. We are moving into a multipolar world. The 'dumbed down' simple model is not going to dominate. If you want your child to be successful, you have to significantly improve their ability to deal with complexity. I put up a wonderful video a while ago about a teacher who had a program to overwhelm his students with classical music. They played classical music when they were in the womb, and that was all they listened to the first five years of life.

He was able to demonstrate that their ability to deal with complexity was phenomenal. They could learn languages very easily, they were phenomenal at math, and it was just unbelievable; his results were amazing.

No screen time and massive amounts of highly complex music. It was very impressive.

If you listen to or read the interview of Herman Gref who is the CEO of Sberbank, versus the most recent interviews of Jamie Dimon, the CEO of JPMorgan Chase, it's night and day. Gref is somebody who is dealing with real economies and many different real cultures, and Dimon is just in a bubble. He is talking over-simplistic bubble talk while Gref is clearly a man who is dealing with extraordinary complexity.

You recognize the same problem when you listen to Pompeo versus Lavrov. One is dealing with the richness and the wealth of the **multicultural/multipolar world**, but he is someone who relates and understands and feels the living equity. Pompeo, from everything that you see in his resume, should be an absolutely brilliant man, has that Clinton/Rice attribute where he seems stupid.

I don't think it's because he's stupid. I don't think that he is a stupid man; I think that he doesn't have that ability to access the real living ecosystem. He is operating in that Federal credit budget.

Americans have **oversimplified bubble thinking**. It's nowhere near as bad in Europe, but, of course, in a unipolar model we are all guilty of it. I was certainly guilty of it. When I came out of the establishment, I was very much used to keeping things simple except in the area where I was specializing.

You want to raise a child who can feel the living intelligence, relate to the living intelligence, and access the living intelligence.

Another great example is a video that I put up sometime during the last year. Jack Ma was at a panel with Bill Clinton and Elizabeth Holmes who, at the time, was the CEO of Theranos. She is now in court, and I think that she is headed for prison.

Clinton and Holmes had clearly grown up in the bubble, and Ma grew up fighting for every tenth of a penny. Ma was completely connected to the very fractal living intelligence. Clinton and Holmes were talking like they were in a bubble. Ma was being very polite, but he was looking at them as if, "You guys are from Mars." It was so amusing

If you read Saker's books and listen to Saker, you will hear the same thing – that deep, rich cultural complexity. That is what you need to survive in a multipolar world. You want to make sure that your children or your grandchildren do not get a 'bubble head' or learn things that require massive government subsidies because, once the subsidy goes away, they are going to be in trouble.

You want them learning skills that are still needed in the fundamentals. In a subsidized economy, we need bridges; in a real economy, we need bridges. There are many things that have crossover, but avoid those things which are entirely dependent on subsidies.

There is a video I promote a great deal, and we will put it up in the *Subscriber Links*. It's called *The School*. It's about a school in Russia which is one of the most impressive educational institutions I've ever seen. I think that it is worth watching.

I posted a video recently about children who are learning how to read and see things blindfolded. You can understand why they want to 'dumb kids down'. How are you going to have secrecy or a military-industrial complex if people can all do remote viewing and see and read blindfolded?

Another thing is that everybody wants their child to be financially literate and financially successful. The key to that is not to teach them about money, but to teach them about math. They need to be great at math. They need to understand that ‘two plus one of that is greater than seven of this’. They need to be absolutely fantastic about math.

If you can get them accomplished at complexity with classical music, and you can imbue them with a love and an ability and a talent for math, then they will pick all of these other things up quickly, including finance and financial literacy.

I believe vaccines are one of – if not the primary – reason for the weakened immune systems and the 54% of children in America who have chronic diseases, but it is a multi-source assault. Definitely, check out the Klinghardt video and also Jeffrey Smith and Robyn O’Brien on food and what it’s doing to children. There are many great examples.

Jeffrey Smith had one on his website that I always loved. I have the DVD from many years ago about a school district in Appleton, Wisconsin where there were a large number of troubled children who were getting poor grades and they had discipline problems. They switched the food to local, fresh, and organic, and –voila! – all the discipline problems went away, grades improved enormously, and basically, the whole place changed overnight. That is a perfect example.

Get your family educated about the dangers of technology and the predatory practices and addictions. If you are a parent or a grandparent, you need to protect your children from criminality and predatory practices online which are rife and over the top. That includes the media as well. Doing that requires the other adults in your family also get educated.

Anything that we at *The Solari Report* can do to help you get educated about that, and educate the people around you so that you can protect the children, it is going to make an enormous difference to where they go in life.

I’ll never forget when I was an investment advisor and somebody was asking me about whether or not they should help their child to buy a house. It would be the house for their one child and their one grandchild.

I said, “Your money is a tool to help you preserve and protect your assets. It’s your daughter and your granddaughter that are your assets. Money is just a tool. So, you can put it in a brokerage account and finance the military-industrial complex,” which is what she was doing at the time. You don’t necessarily have to do that in a brokerage account.

“Or, maybe you ought to use it to protect your real assets.”

She said, “Oh, right!”

We’ve been trained to not think of people and living things as our assets, but those are our real assets.

I have much more in *Take Action 2020*. This is a very important area.

The Beatdown: Company, Neighborhood, and Cohorts.

There are many different groups to beat down.

Like the **Covert Operation** section, this is an area that is worthy of an entire encyclopedia. So, rather than try to write an encyclopedia, I would like to give you a few critical concepts that you can use to understand the beatdown – primarily beatdowns on a place. Many of the beatdowns on small companies and people come in place-based neighborhood beatdowns. Remember, the expression ‘beatdown’ came from African-American communities who really did get the first beatdowns. They are a little like the ‘canary in the coal mine’.

I started to think about the economics and the political control of a place when I became Assistant Secretary of Housing. I was interested in it before, but I didn’t have access to the data.

As a matter of fact, one of the reasons that I went to HUD, and then later became the lead financial advisor is that HUD, outside of the Fed, was the single richest depository of place-based data that I knew of outside of the databeast. Once I began to envision that the defense contractors and intelligence agencies were running a databeast, then I realized that I knew what I was trying to do, so I got a pretty good ‘grokking’ of what they were probably doing.

I was at FHA as the Assistant Secretary of Housing. I hadn’t been confirmed yet, but I had been nominated. I kept listening to homebuilders and mortgage bankers and realtors lobbying our organization, and there was something deeply wrong. They kept trying to get me or get the government to change a rule or do something with their credit that would make their stocks go up – it would generate more revenues, more profits, and make their stocks go up. So, they were constantly lobbying us to do things that would get their stocks to rise.

I realized that most of what they were asking us to do would be harmful for communities. There was a win-lose relationship between what made their stocks go up and what was wonderful for communities, or what served the stated purpose for communities. I realized that this was an unbelievably win-lose relationship between government money and places. In fact, corporations were making money in the stock market from doing things in places that was causing the government money to have a more and more negative return on investment in places where their economies were shrinking relative to what was possible.

Finally, I realized that there is nothing that helps to see the health of a community. We can see the health of the stock market because we have a performance indicator: the Dow Jones. Its price goes up, and now it's the S&P. So, whether it's the Dow Jones or the S&P, if you look at the current President, he is always talking about the stock market going up, and that is his performance indicator. But we don't have a performance indicator for the health of communities.

So, I came up with something called the **Popsicle Index**. The Popsicle Index is the percent of people who believe a child can leave their home, go to the nearest place to buy a Popsicle, and come home alone safely. If the Popsicle Index is 100%, it's because 100% of the people in that place feel that way.

I used the Popsicle Index because I wanted something that was simple, and I wanted something that academics couldn't control. So, you can't tell me that my Popsicle Index is 100% when I feel it's zero; you can't. You can't use any statistics, and you can't rig it. What I think is legitimate is how I feel.

I discovered that the feelings of people in a place really do reflect reality. That was before massive entrainment in the cell towers, but still, I think that people's intuition and feelings about a place are good indicators of what is going on. So, I wanted something that was outside of the control of the academics because they are essentially funded by the banks and the central banks, and you always end up with something very controlled. I wanted something that was democratic, and I wanted it simple, but I wanted it to be about living equity.

One of the things that I discovered is that if the children feel safe, and the parents think that they are safe, then everybody is safe. If everybody feels safe, then there is high trust. If there is a real opportunity for youths, particularly if the education is good, then the value of the real estate and the businesses go up, up, up. There is a real connection from the Popsicle Index to the value of the financial equity in the place.

I wanted something that if it went up it would drive the financial equity up and get us into a win-win model. I wanted a win-win model. So, the question was: If we are in a win-lose model now between the Dow Jones and the Popsicle Index, how do we get a win-win?

I went to work and did similar of what I did at Hamilton, which was figuring out how you could do that. I really believe that we figured it out, and started to prototype it, which was when the Department of Justice came 'down on our head'. I think that there is a connection between the fact that it would work and them coming down. You had a deeply negative return on investment to the taxpayers if you reengineered that. The taxpayers would save a fortune, and the private sector would make a large amount of money. The complication was that it wouldn't be the 'big guys' coming in and sucking up the market share.

As Ross Perot would say, there is a 'giant sucking sound' between local small business and communities and the stock market. I wrote about this in *Dillon Read & the Aristocracy of Stock Profits*. That is one of the reasons I wrote that as a case study to help you understand these issues. So, if you haven't read that, you might want to.

At the root of it, it is very important to understand the **arbitrage**. Arbitrage is when you can sell it in one place and buy it in another place and make a profit. So, you have this discrepancy in values between two markets or two assets, so arbitrage is both a noun and a verb. You can arbitrage the difference.

If you look at the beginning of the 1990's, and small businesses and the local communities; let's say that the small businesses and local communities combined were making \$100 million. Let's assume they had \$10 million of profits on that – so a 10% margin. So if you said: How much is the value of those business? What is their price-earnings ratio – which is the multiple of the equity valuation to the earnings – what are they earning?

Let's further assume that the price equity value – unless there was very valuable real estate – would have been approximately five. Let's say that the S&P at that time was about 10-12. What that means is if a dollar of income is flowing through the small businesses, you can translate it into \$5 of equity value. But if it is traded through one of the publicly-traded corporations, it's worth twice as much. So, there is a huge arbitrage to move that income flow from the small businesses in a place to a big publicly-traded company. So, you get this giant sucking sound where the big companies can come in and spend a fortune (in theory) buying away the income – not only in the marketplace, but by buying the politicians to change the rules.

Once again, I use the expression that we used as one of the quotes in *Dillon Read*, “Make a law, make a business.” It’s an old New Jersey street saying. So you make a law, and suddenly, there is a giant sucking sound of the incomes out of the small businesses and into the large businesses.

One of the reasons that ‘bites’ is if you look at the capital within a community, all of the small businesses are working hard to make money. They are paying people. Everybody is putting money into their brokerage accounts or in their pension funds or in their IRAs, and then the laws say that that money has to be invested in the big publicly-traded corporations. So once again, we are financing our own doom.

It is interesting that people will say, “Why is \$1 traded at only five times earnings versus \$1 traded at a much higher value? Today it’s 19.” So, if a dollar of income trades at a multiple of 5 in my local small businesses, why would it trade at \$20 in a big publicly-traded company? There are several reasons.

One reason is a big publicly-traded company’s stock is **liquid**. So, if I put money in my local business, who knows when I can get it out, and who knows what it’s worth? At least if it’s in a publicly-traded company, I can go online, determine the value, and say, “This stock is down two points today. It’s worth \$20.” So, there is a ready market, and there is ready liquidity.

But the other thing is that there is a **depth of management**. If the CEO of my publicly-traded company is in a plane crash and dies, there are 20 people to take his place. There is depth. If the person who runs my local business dies, the business might be wiped out. There is no deep management bench. In addition, if you look at all the capital on the planet – including all the capital coming out of my neighborhood – much of it is generated into the publicly-traded stock. So, there are many rules that flow capital that way.

In fact, one of the things that I was doing was setting it up so that you could flow the capital around the neighborhood, and make the local companies through a **combined pool publicly-traded**, and still protecting the privacy of the business and the ownership so that somebody at the local PTA doesn’t use your financial disclosure to get you.

So, we were figuring out how you could circulate locally, which meant that the local people were going to get back in the game. At the same time, Congress and the multi-national corporations and the central banks were doing everything so that the ‘big guys’ could move in on the local market share and take it away.

Why would the politicians do that? Because the politicians need campaign contributions. Where do they get campaign contributions? They get campaign contributions from capital gains. So, I help the franchise move into your county, suddenly, the restaurant business is now flowing through their franchise, their capital gains go up by a large amount, they kick back a percent through their lobbyists or law firms or directly through their pact to me, and that is how I get campaign contributions. So, there is a **kickback system** working with a political system whereby everybody is trying to suck things into the stock market that makes the system ‘go around and around like a merry-go-round’.

The local citizens are absolutely outgunned because they don’t begin to have the financial leverage of the publicly-traded stock that can be levered with big bonds, big debt, and much lower interest costs. You are always hearing me say, “It’s the guys with the zero percent cost of capital versus the guys with 17-30% cost of capital.” Depending on the business, that can be a bit of an exaggeration, but it’s basically true. You are talking about big competitors coming in with political backing, and zero percent cost of capital, and they are competing with local businesses who have far more constraints on them politically, in terms of what they can do and a much higher cost of capital.

Let’s make it worse. Let’s turn this into a **leveraged buyout**. Let’s say that the syndicate is loosely associated with the people who bring in the drugs. So, now we have the small business exhausted. They are all running down to the jail at night to get their children out of prison, and in the meantime, you’re making a huge amount of money in that community, and you can move in and finance your franchises. You are moving your bribes to the politicians with the money you make from that community, so you end up behind the community with its own money; it’s a leveraged buyout. Look back at the Opium Wars; the model is very, very old.

On one side, you have players who are harvesting your neighborhood for organized crime profits. It could be mortgage fraud, it could be narcotics trafficking, but then they are turning around and taking the money and playing the capital gains game, moving the small business income over to their financial statements and balance sheets. So, you have this giant sucking sound out of the local into the global.

What is interesting is that if you look at the power of technology, it should decentralize. It should let the local people get back in the game. In fact, if you look at the models that I was working on at Hamilton Securities, that is exactly what you are going to do; you are going to centralize the back office centralize the capital raising, liquefy the equity, but protect the local businesses to still ‘rock-n-roll’.

Think about it. Why do 100 small businesses in a neighborhood need 100 databases on all of the customers in the place? They don't. They can use technology to create a local cloud, make it private, keep it encrypted, and do amazing things. But, of course, that also means circulating the capital locally. If you look at the extent to which Hamilton Securities was targeted and the software was stolen and destroyed: there was one software system called 'Community IPO in a Box'. You could literally click radio dots and create a prospectus that normally would have cost a few hundred thousand dollars to produce if you had hired a big fancy New York or Washington law firm.

Needless to say, as I said earlier under **Targeting of Children**, the greatest investment drain on a community is that they build the human capital of having, raising, educating the children, and then they move away. It's part of the giant sucking sound. The financial capital sucks into the machinery, but the human capital sucks in too; that is the number one drain.

If you look at the model we've been using, there is a way of creating apprenticeships and internships within a place, but also creating stock option programs and all the incentives that will keep the youths locally. One of the things that I used to hate when I was young was watching the drugs come in, and then the money would circulate around, and basically the individuals who sucked out the profits would come back in. They would dribble a little back into the neighborhood for good works.

The parents were all considered 'deplorables' while their kids were competing to be seen in the photo ops with the rich guys from downtown who were doing good works. Deep inside, everybody knew there was a really ugly game going on, but there it was.

It's a **takeover model**, and it is centuries old. Go back to the Opium Wars and bring it up to the present. That is why, if you want to go back and read my work on narcotics trafficking, I have a great old Solari audio seminar that is in the library on the history of US narcotics trafficking.

I want to talk now about another concept, in addition to the giant sucking sound in places. The second is **slugs versus followers versus net energy plus**. This is a gross oversimplification of reality, but it's a helpful way to think about what has been happening with a lot of the Federal credit and government money.

My theory is that in any place anywhere in the world, whether it's a company or a community, 10% of the people are net energy plus. So they are entrepreneurs. They always give more than they take; they are doers.

They love to take action, and they are very generous with their time and energy, and they create a wealth of value. They lift plenty of boats.

Then you have a group of people who are followers. They follow around whoever is in charge. With some people who are net energy plus, something happens and they get drawn into their personal life or they have a low energy period for whatever reason. They will fall back to being followers, but then they will be net energy plus again. So you can cycle through this: The followers eat what they kill; they are net energy neutral.

Then there is a group that I call the slugs. If you read the history of management philosophy, it's all about slug management. The idea of Deming – in my words, not his – is that, “The slugs are always with us; you have to keep them in the corner, out of the way of everybody else who is trying to get the work done.”

What is interesting is that when I grew up, I grew up in a poor neighborhood in West Philadelphia. The high-performance people ran the neighborhood. Here is what was interesting: It was impossible from looking at them to tell who the high-performance person was. It could have been a black grandmother, a young intern from the hospital, or they could be highly educated or not educated at all, but they would always find each other and conspire to run the neighborhood. If somebody was bad and one of the slugs misbehaved, they would cut off his money because they controlled the economic vitality in that community, and they controlled the households. The high-performance people rose to the top.

What was interesting was when the government money came in, and the neighborhoods started to get first centrally controlled from City Hall, and then centrally-controlled from Washington, it empowered the slugs, and the high-performance people couldn't cut the slugs off. It was absolutely one of the tactics that the top-down money was using to take over the place.

When I first became Assistant Secretary, if you looked at my operation, I had 7,000 people working for me, and they were all behaving very much like slugs with rare exceptions. I discovered that the problem was when the slugs are in control, when you put the 10% in control who were politically motivated and not high performance, and they don't do an excellent job at the work; the followers follow the slugs. Then suddenly the operation looks like everybody is a slug.

What I discovered, though, is that if somebody like me comes along who is willing to take a considerable amount of political risks, you switch it.

You switch the slugs out of control, you put the net energy plus people in control, and suddenly, their vitality kicks up tremendously, they come out of their shell, and now the followers follow them. Suddenly, the whole organization is high-performance.

I have gone into situations where you have populations who are trained to both cultures. One is to some extent a government cost-plus, the other is entrepreneurial, and they are literally, “Oh, I see. We are going to wear this hat as opposed to wear this hat,” and they can switch from being 100% slugs to 100% net energy plus – bam! – just like that. It’s the most unbelievable thing to watch. Now to a certain extent, this is a deeply American phenomenon. I apologize to some of you in Europe or down under.

You have this dynamic, and many times I’ve had somebody say to me, “That company,” or, “That community is hopeless.” I know that it’s not hopeless at all because the moment you switch the slugs out, and put the new energy plus people in with a framework where they can be protected from the slugs, one of the problems gets back to my discussion of *Yellowstone as Movie of the Year*. The Beck brothers are very wealthy, expensive slugs, and are dangerous. The ultimate question for many of us in many places is: How are we going to deal with the Beck brothers, especially when they are backed up by very powerful intelligence agencies or mercenaries? It’s not a simple or easy thing.

You want to understand the slugs versus the net energy plus people because this is a very important phenomenon. The problem with much of government money is that it is designed to control places, not to optimize local economics, and it uses the slug and slug principles. It creates a slug culture.

I will give you a perfect example. In the past, the local banks would issue mortgages, and they would hold those mortgages on their balance sheet. So, the local financial institutions would have a tremendous vested interest in crime not taking over a neighborhood because crime would cause problems with people paying the mortgage and defaults and it would create a mess. So, they wouldn’t tolerate the levels of narcotics trafficking and the mortgage fraud that is happening in many communities in the United States.

However, once **government-guaranteed mortgages** turned up; it’s really simple. If there is narcotics trafficking, they don’t lose money because on the default, they get paid by the government. It gets even better. They don’t care about mortgage fraud either. In fact, if you look at the drugs and mortgage fraud, and if they are laundering the money, they are doing even better. So, with the Federal credit you can set neighborhoods up so that they make money on liquidating the neighborhood.

That is what we are seeing – both with the healthcare system and the financial system. We have engineered using the Federal credit incentives whereby many of the businesses in a place make money from liquidating the people in the place. It's similar to what Jon Rappoport calls 'Hotel Auschwitz'.

Let me give you an example. There are many different stories that I've told throughout this series that I can use as examples. I don't want to repeat all of them, so I will only use one.

You had a group of developers move into Hickory Valley and Hardeman County, which is the county that I'm in. Immediately, you started seeing all sorts of 'funny business'. We had this series of home invasions; we had buildings that mysteriously burned down that the developer syndicate had wanted to move, but they didn't want to absorb the cost. We had the murder of a trustee of a big family trust with some money in it that may or may not have been related, and then a young black person was arrested for a murder, and the black community was so enraged that they ended up picketing the courthouse – which is unheard of here.

There were big efforts to put in cell towers and smart meters so that the one-way mirror could be operating. All sorts of 'funny business' was occurring. These patterns often happen when you are trying to pick up land cheap or move populations around.

The final straw for me was I discovered that there was an effort at our City Hall to put in an Obama Administration grant for a tower at City Hall and establish a learning center funded by the government but controlled by the personnel hired by the real estate developers who engineered and organized the grant.

So, you have private real estate developers hiring people and putting in computers to screen our children. I thought, "No, not in my neighborhood."

So, I ended up at the City Council meeting, and it was one of those peculiar things because I truly believe that they were going to use the learning center to screen children, including the pretty ones going to the White House for pizzagate. This was not pretty.

Did all of the developers realize what was really going on? I can't say, but it was one of those situations where 'they knew that I knew, and I knew that they knew that I knew'. The question was: How blunt was I going to have to be during the conversation?

It's bizarre because when they came in – the whole group of them – you could see that they were prepared, and they were all ready to concede that we could hire the people who were going to do the learning center. I said, “No, you're not putting computers in here to screen our kids.”

It was interesting because it was a big reversal of roles. I was big on computer learning centers to train people when welfare was ‘reformed’. My concern was that many people who lived in HUD housing had no computer skills, and they were going to have to go out and get jobs. Without those computer skills, they couldn't do jobs, let alone jobs that they could do near to where their child or elderly care responsibilities were. So, I was a big proponent of learning centers. Looking back on that, I think, “Uh-oh. Are they going to use those to screen our kids, too?” although it was very much focused on adult.

I never had to get totally blunt at City Council, but it would have been very interesting if I had to. Luckily, the City Council was able to vote it down. Unfortunately, when they voted it down, the cell tower flipped over to my cousin, who was on the City Council. Regrettably, he engaged in massive material omissions, and the net result was that I now have a big cell tower right behind me, and my cousin and I haven't been on speaking terms since.

There is a new development in Hickory Valley that gives you an example of this problem of **negative return on investment economy**. You ‘can't make this stuff up’. Rather than go through it with you now, I'm going to put up the first letter that I wrote to the City Council about it, and I am going back and forth with them now. I will give you the letter that tells you the story of the walking path.

If you haven't listened to Patrick Wood and I, we have two *Solari Reports*. There is one on technocracy and one on opportunity zones. I strongly recommend them.

The opportunity that I identified to create enormous wealth by aligning the Dow Jones and the Popsicle Index has always been here. It's the greatest capital gains opportunity on the planet because you are talking about aligning financial capital with environmental and living capital. We have so overshoot the sustainable level. The question is: Can we go back? That is a question of both political organization and technology. Another big question is: Can we do it without the leadership saying, “It's simpler to go to depopulation”?

Suffice it to say, there is extraordinary wealth that can be created by significantly reducing our footprint if you align financial equity and place-based environmental equity. We can make money lowering our environmental footprint and healing the environment. You can absolutely get the two inline.

If you look at what we are doing with the Internet of Things and space and bringing down the energy prices, all those things are going to create enormous **place-based capital gains opportunity** in this kind of model that I am talking about. But if you look at what the leadership is planning, they are planning on top-down total control using digital technology, and I don't think that there is anybody who does a better job of explaining how that is envisioned to work than Patrick Wood's concept of technocracy. But they can use technocracy and digital technology to move into places and exploit all that capital gains opportunity, and they are clearly positioning to do that. It is something that you are going to be hearing a great deal more of from me on *The Solari Report*.

Their goal is to make money on the real estate from the Internet of Things and the drop in the energy price – much of which are going to be **space-based and satellite-based**. That is one of the reasons that this push into space is so important to the economics. Remember, when you bring the energy price down, you don't make money on the energy companies, but you are going to make big money on housing – the land and the real estate. They knew this 20 years ago when they pumped and dumped the housing market because it meant that they could pick up quantities of land and real estate cheap, but it is also one of the reasons you see Mnuchin and the US Administration proposing massive blow-out increases in credit rolling into housing.

Let's see if Congress approves it. It's going to be a 'tsunami of financial methadone'. If you think that the last housing bubble was bad, 'you ain't seen nothing yet!' Whether that hits before the election or after the election, who knows?

Many people that look at the world intuitively understand that the world is not being optimized. The environment isn't being properly taken care of, the economy isn't being optimized, and they don't understand that much of this is not optimized to happiness or economic wealth; it is optimized to control, and with control the ability to harvest and keep many things secret.

It's very interesting. I once had a little *Solari Circle* that was an investment club that we did online by phone. At one point, I asked the group that if we tried to estimate, and if we were free to optimize the economy to produce the most wealth in an environmentally healthy way, how much more wealth there could be on Planet Earth.

We figured that there would be anywhere from ten to a hundred times as much wealth as there is now. It would take a little evolution, but it's rather extraordinary how expensive oppression is, and how expensive **top-down control** and secrecy is.

I want to talk a little about a series of different issues. I've been talking about **beatdowns** on neighborhoods, and I want to talk about the beatdown on a company.

Much of the beatdowns on companies relates to small businesses and places. They are beatdowns on neighborhoods or they are beatdowns on the rural areas. Most businesses get beat down in the place-based effort or the effort to switch income from smaller business into big business.

We talked about some of the business issues in the **Covert Operations** section. Matt Taibbi's story of the hit on the Canadian insurance company is a classic. The story of the hit on Hamilton was much longer and more gruesome, but it's really a classic – particularly if you have legal training or are interested in the legal side. We talked about that in Part V in **Legal**.

Most of the hit on companies is fundamentally: Steal the revenues, steal the people, steal the assets. It's very financially oriented, and it's also to protect the market share. I think that some of the hacking that we deal with is basically people trying to control the narrative.

There is also such a thing as a beatdown on cohort. I will use the bitcoin story that I have used several times, but I think that it is really classic. When the bitcoin pump was on, I kept warning everybody. We did a big special report which is up at Solari.com. I kept warning everybody, "Look, you are being pumped and dumped. What you need to understand is that if you are swapping from one bitcoin to another to Ethereum or something else, these swaps are realizing taxable gains. As the market is getting pumped, you are realizing taxable gains. You have to take the money out and escrow it because this is how they are going to beat you down. A beatdown is coming, and they are going to use taxes to put you 'over a barrel'. This is another way to get control files."

As predicated, I went to this bitcoin conference, and I kept hearing all these bitcoin people talking about, "Oh, it's all secret, and it's private, so we don't have to pay taxes."

I said, "No, no. You can't do that."

Sure enough, they were swapping like crazy up to \$19,000 to create an abundance of taxable gains, and then the market crashed and they were left with positions that are less than their tax liability. I thought it was so obvious that this pump and dump with the tax game was exactly what they did with the farmers in the 1980's. This is in the playbook, and wherever the CIA playbook is, it's there.

They didn't see it coming, and they didn't see it going. Of course, I'm sure that none of them reserved their taxes. They were too high on believing that they lived in a private world that was all wonderful.

So, I came back from the conference terrified for the subscribers. I had some of my attorneys write a wonderful *Special Report* on the tax and regulatory liabilities of cryptocurrencies, and I tried to get every subscriber who was dealing in cryptocurrencies to read it. Then, of course, the dump came, tax time came, and then it was announced that the IRS was opening audits of 10,000 bitcoin traders.

That is the perfect example of a beatdown on a cohort.

Let me talk about some random issues. One of the most important tactics – which is always part of a beatdown, whether it's of a neighborhood or of a company – is **divide and conquer**. But the most powerful and important divide and conquer – much more important than divide and conquer of religions or of races – is the divide and conquer of men and women.

I have a great series called Promoting Women, and in that series, there are about ten commentaries. I talk about the economics of men and women. I discovered in a series of different businesses is that an all-male team or an all-female team are significantly less productive in terms of financial performance for the investment banking client or the bar client or whatever it is. It is much more productive for both the client and the house, and it is all detailed and written up in Promoting Women.

I have a long history of studying the accounting and economics, both time and money, of what kind of teams are more productive. I have studied men-women, and Myers-Briggs profiles as all of these other kinds of profile systems. I have all these different theories of what makes a great team in a government, in a business, and in any context. One of the things that I will tell you is that where men and women are working together, they are much harder to trick.

One of the things that I found as an investment advisor is that when it comes to financial fraud, you can trick a man and you can trick a woman, but you cannot trick a man and woman working together. So, if we want to be politically powerful, if we want to be politically secure, one of the things that we have to do is figure out how to get the women and men giving each other energy – whether it's in a marriage or a family or in a company – because where they do, they are much more effective, not only at seeing and executing opportunities, but much more effective at risk management.

I can trick a man, and I can trick a woman, but it is much harder to trick a man and woman working together. There is something magical about it. It's not just sex; there is some kind of chemistry, and it's a whole other conversation which we should do sometime.

Here is something else I discovered: If you can get men and women giving each other energy, then all the misunderstandings that happened because of race or cultural background fall into place. They get soft with rare exception, particularly if you understand Myers-Briggs profiles or some of these other tests that explain how people solve problems and process information. If you get a Myers-Briggs balance, and a balance between men and women, wow! you can beat plenty of the different covert tricks, you can beat plenty of the shriek-o-meter tricks, and you can beat plenty of tricks.

Whether it's a beatdown on a neighborhood or it's a beatdown on your business or a beatdown on a cohort, even if it's a beatdown on an individual, solve the male-female divide and conquer. Figure out how the men and the women in the situation can give each other energy. They don't have to agree, they don't have to like each other, but they have to find a way to organize and give each other energy, and that means watching each other's back. That improves the immune system to deep state tactics by 1,000%. It's rather remarkable.

I mentioned this before: I think it's very important to understand the history of narcotics trafficking and how the war on drugs and the combination was used to finance and build the 'train tracks' of control that then turned into the war on terror. We have quantities of back information on that. You could start with the *Dillon Read* story and *Narco Dollars for Beginners*, but we have the audio seminar and some other articles as well. There is an abundance of good information.

The two books that I always recommend are Dan Russel's *Drug Wars*, which takes you from the drugs being brought in as part of creating the IRS and the Fed, and then Michael Woodiwiss's book, which does a great job of explaining how all the laws and regulations on the war on drugs were really used to lay down the train tracks of control and then were moved through the UN and some of the contracting abroad to do the same abroad.

I told the story before, and I will tell it again, of being at a little think tank in Washington in 1998. Three women had come in from South America; from Columbia, Peru, and Bolivia. They were explaining how the war on drugs worked there, and they were describing how they were moved off the land into these new places that were built by the government and how the whole game worked. I kept asking all these questions.

Finally, they were getting more and more uncomfortable. Finally, one of them just reared back and said, "You say you know nothing about our country, but you know everything. You know exactly what is happening and exactly what is going on." She was looking at me like I was some 'plant'.

I said, "Well, I know nothing about your countries, but I used to be the Assistant Secretary of Housing, and apparently it works in your countries just like it works in our country."

So, my questions were based on how it works in the poor neighborhoods in America. I didn't realize that the same contractor that was doing some of the contracting for the enforcement at HUD was also the lead contractor through USAID in their countries doing the war on drugs. So, we had the same corporate contractors and mercenaries doing the same thing in South Bronx that they were doing in Peru and Columbia.

One thing that is very helpful to understand is how the **war on drugs and narcotics trafficking** works because they are two sides of the same coin. WC Fields said, "The snake and the snake potion."

The second thing is that I did a speech, and Farrell did two speeches at the Secret Space Program 2014 that describe the **hidden system of finance and the black budget**. Those are very important aspects of the covert financial system that have grown and grown and grown and have basically busted through. Essentially, we are looking at a world that has been taken over by those covert cash flows. It's the magic of compound interest when you don't have to pay taxes.

Then you add digital technology combined with control files, and you get unbelievable power. One of the things that I want to stress is that the control file system when you get it digitized – and the fraught in the 1980’s really built this, and then it just flowered in the 1990’s –can primarily get you on the databeast. Whether it’s a cohort, a company, or a community, you can identify all the different people you need, and you can figure out how to ‘pull their leash’.

If you look at place-based optimization or cross-sector optimization, it is remarkable what you can do when you get that whole control file network digitized and on, what I call, the databeast.

I think that I’ve talked about this many times as one of the important reasons of how the Masonic networks and the Jews power shifted the church. The church’s great power was that they had local churches with confession booths and, needless to say, pedophilia operations that were great on both personnel benefits and control files. They have very much been power shifted by the **telecommunications**.

When you look at these different beatdowns, particularly at a neighborhood level, that sweeps up many of the small business beatdowns. When you look at that level, we really need to face what is going on at an intimate level.

I always tell people – and I’ll just speak about the United States – that the swamp is from sea to shining sea. You build and harvest and finance the swamp one neighborhood at a time. All the organized crime that is going on is not being done by people in Washington; it’s being implemented day-to-day by people here in our families, in our communities, our neighbors, and it is all going on here.

If you look at **corruption**; corruption is from the very top to the very bottom. Of course, the stress on the bottom to engage in this from the top; the more they get squeezed economically the easier it is for people to fall into the pattern. That is part of the cultural and economic debasement.

We are going to have to face this at an intimate level. The big question that we are going to have to face is the question that I highlighted from *Yellowstone*, “How are we going to deal with the Beck brothers?” How are we going to deal with the people who have used the dirtiest tricks for many, many decades and – with rare exception – we were afraid to stop them?

We can't stop them alone. When various people have tried to stop them in small groups or alone, they have gotten their head handed to them. So, part of this is figuring out how you can, not only stop them, but if you have a win-lose relationship between the Popsicle Index and the Dow Jones index, we all need to understand that we are on both sides of that. Many people have pension funds, and many people have brokerage accounts.

The pressure to get the stock market to go up is also from all of us. Most of the people in the population think that they want the stock market to go up, so there is this tension in the win-lose model, which is why it is so important to evolve it into a win-win model, which is why I'm always asking, "How do we push the red button, and how do we **turn the red button green?** How do we make money pushing the red button in a way that people aren't afraid to push the red button because there is a pathway for them to be economically viable or successful?"

Making the Dow Jones go down and the Popsicle Index go up is not going to work. You have to find a way to get the living environment and living equity – including human equity – in alignment.

I certainly see no interest whatsoever in the leadership finding the win-win and working with the general population on the win-win. I would say that they are fairly skeptical of the general population, and the general population is skeptical of them. But I always have to lay it down for all of us that it is possible. In fact, with the spiritual and cultural revolution, it can be done, although I think that the environmental challenges that we face are much greater than they were 20 years ago. The caveat is that Mr. Global has access to knowledge about the real geophysical risks which I don't have. The leadership is clearly afraid of something. I don't know what it is, but Dr. Farrell and I discuss the **Unanswered Questions** every *Wrap Up*.

That's it for Part IX. We move on to Part X with three topics: **Hard Times: My List of the Personal Worst, Helpful Strategies, and Closing Thoughts.**

Part X

This is the last part in three sections: **Hard Times, Helpful Strategies,** and some **Closing Thoughts.** Let's dive into **Hard Times.**

These are the most challenging things for me in dealing with immersive deep state tactics. It's interesting because I noticed that I went through it early, but as I look around the world, I'm seeing more and more people suddenly finding themselves immersed as targets of the **deep state tactics**.

1. **Who do you love?** When the litigation started, and all the various litigation investigations and harassment and whisper campaigns started, there were two people who I most loved in the world growing up. One was essentially a patron – one of the wealthiest, most influential people in the United States. The other, interestingly enough, was one of the poorest and least influential people in the country.

Looking back on it, loving two people at the exact opposite ends of the spectrum created quite a dispersion in my relationships to our social hierarchies. It left me believing that intelligence and character is where you find it, and it can be found anywhere.

The process of the litigation and the decision to go ahead and fight turned into quite a long period of time, and I had to face the fact that the first person who I loved had betrayed me even though I was doing what he had once encouraged me to do. So, I had to choose – in one sense – between my love for the two of them.

The second was already dead; she had died years earlier, but my love for her was one of the things that inspired me to fight and object to the genocide underway. Another was that I absolutely believed that the US leadership was going to fail in their unipolar plan, which they indeed have done.

It turned out to be the right decision to leave the establishment, dig in, and fight, but I'm sure it would not have looked that way to people who were watching and judging what a smart decision would be.

One of the things that resulted, and it was very much a coincidence, was solving one of the great mysteries of my life, which was trying to understand who had killed my mother and why. It was only after many years of litigation that I realized who and what had probably killed my mother, and that the litigation was not the first time that patron had betrayed me.

The challenge for me was to face the facts that the people and institutions that I most served and most loved had ordered me to be destroyed without very much care or concern. To fight and succeed at fighting, the question for me was: How could I do that

In one sense, I had to reverse the goals of the ‘Turn your heart to stone’ ceremony.

It is very important in this world to understand who and what you love, what is worth living and dying for, and to get those choices right.

2. Adjusting to being hated. I was someone who was very successful, very wealthy, and was used to being liked. I worked hard at trying to be kind and considerate to other people. One of the things that I discovered is the way that the establishment appeases the crowd when they want to throw somebody overboard is they invite a population that is angry at the establishment, and they take the one who they are throwing overboard and say, “Okay, here is a member of the establishment. We give you permission to kill and destroy them.”

It is like ‘blood sport’. So, the whisper campaigns and the smears are coming way too fast and furious to do anything about it. For some reason, the crowd enjoys falling in.

I’ll never forget in 1996, I had dinner with a developer who I had worked with. His name was Scott Nordheimer. He had gone to prison during 1990-1991 for securities fraud, and he looked at me and said, “The fix is in, and you are going to jail.” This was before the whole thing actually started. He was so happy and excited, and felt very irritated at the notion that I thought I could be very successful financially and in every other way by doing things that were clean.

People would get dirty in a variety of different ways, and then they would be very angry at you for thinking that you could stay clean and succeed.

I saw some employees who lied to try to protect themselves – which, of course, made it harder for me to manage and lead and protect everyone. I was trying to protect all the employees and vendors who worked for me.

I had a bank that cheated me. They were trying to win favors with the other side, but also, the other side gave them permission to essentially steal from us.

I saw former employees who were happy to see the office get auctioned. It’s almost as if they enjoyed watching me fail. So, Hamilton was being liquidated; Fitts was being liquidated; her name was being liquidated, and many people jumped in and enjoyed it.

I was amazed to discover how many relatives had been jealous of me because I was so successful, and it gave them a great deal of pleasure to see me disgraced and even poor.

It made them feel good, and they would look for opportunities to bully me and push me around as a result of the establishment getting me in a corner.

Some had a need to help the other side to get promotions and insider treats. Others were just deeply vested in seeing me poor. I'll never forget what one relative said when I said, "No, I'm going to win the litigation, and then I'll go back and start another company, and it will be very successful," and they were angry. They said, "No. It's over. You are going to be poor forever."

I said, "No, I'm not."

Everyone tried to put this 'poor and failure' picture on me. It was clearly quite amazing, and they had this powerful need to see me forever destroyed.

I always enjoyed helping other people succeed. It's one of the ways that I get my 'jollies'. But what I hadn't known, because I was too busy trying to succeed or help other people succeed, was how many people enjoy destroying other people or putting them down or kicking them when they're down.

We have increasingly – as the debasement of the culture – a real 'crab in the bucket' syndrome where the crabs pull each other back down into the bucket, and the leadership does a masterful job of using that to good effect.

It was hard for me when I started through the process to fathom the small-mindedness and the greed at the lower levels. When you've played at a much higher level and you swing around billions of dollars, it's hard to relate to people killing and betraying for scraps. I had to understand and learn how to manage the dynamics. I was used to people selling you out for a billion dollars, not for a dollar. So, I had to learn the world of selling each other out for a dollar. It took a long time, and it required giving up hope of belonging to any part of American society. I had to learn to live alone, to enjoy living alone, and to enjoy my own company. I now understand what people mean when they say 'wild at heart' because in your heart you go wild. To a certain extent, you can never go back.

3. I had to realize – and this was hard for me – that there was no possibility of cooperating with US establishment. When I negotiated the settlement in 2005 and finally settled in 2006, there was tremendous pressure on me to settle on behalf of myself and Hamilton as a corporation, but not have that settlement extend to other employees of the company. They wanted me to **throw the other employees to the wolves**, and they made a very big 'hullabaloo' about taxes.

I refused to throw anybody to the wolves. I protected a series of government officials – some of whom turned around and tried to throw me to the wolves. That, of course, is always the risk.

I was extraordinarily impressed with the stress that they tried to use to squeeze me, but I said, “No, the deal has to be all of Hamilton.”

Then they were adamant, “Okay, well, it doesn’t include taxes. You are totally liable on the taxes.”

So, my assessment was that the goal was, after they paid Hamilton all the money they owed after all of these years, they were going to try to ‘claw’ it all back on the taxes. So, one of the things that I figured out was that if I paid out bonuses to all the different people who had helped me stay alive so that there was no money to go after, they would be sorely disappointed – which is what I did. My bet was that I could start another company and succeed at it, so I didn’t need to depend on the litigation proceeds. I felt that it would be much safer with the people who had helped me.

One of the things that I discovered is that kind of generosity had served me well. I told you earlier that I had been very generous with people when I was wealthy, and that was the money that came back and really saved my life. If I hadn’t been that generous – given the hatred and the ugliness of the ‘blood sport’ – I can’t imagine how I would have survived.

As expected, we settled in 2006, and I spent the next four years on the most remarkably stressful, unbelievable experience on the taxes. I called my CPA right after I received the money, and said, “I don’t want to wait until tax time; I want to pay these taxes right away because I want to know what all the liabilities are before I pay out the money and all these bonuses.”

She called me back two days later and said, “You’re not going to believe this, but all of your files have disappeared.”

We went on from there; it’s quite a ‘Shaggy Dog’ story. It took four years, and I spent \$150,000 to finally file all the taxes, and I owed zero dollars in taxes. But it cost \$150,000 of legal fees to get that accomplished. Needless to say, I had to pay the money out before I knew what my tax liability was, and the fact that it was zero.

My stepmother used to have a wonderful expression called ‘the endless agony’. So, I was thinking it was all over when I settled, but no, I had four more years of endless agony.

I truly believed, “We had a big fight. The fight is over.” I certainly had no desire to go back into the establishment, but I thought that I could move on with my career and find a way to align with the others, so to speak, and be able to cooperate on occasion, but certainly avoid trouble or nasty confrontation. I learned that wasn’t possible.

I may have won the litigation, but I learned that the war was forever – at least until a certain group of people died. The whispers, the smears, and the dirty tricks and expenses continued.

Between 2006 and 2010, as I did those taxes and discovered that the war was forever, in one sense, it made it easier to do *The Solari Report* because there was no pressure to get along; it was impossible. It was like the story of the ‘scorpion and the frog’. You were dealing with a group of people that somehow had a grudge. This applies to the US leadership, but I haven’t found this to be the case abroad. It made it easier to do *The Solari Report*. Of course, at *The Solari Report*, you have to bring transparency to things that I think the establishment would prefer to have secret. So that conflict of interest continues.

It’s like the story I told you about when I was on the board of Sallie Mae, and the chairman of the board asked me to join the Council on Foreign Relations, and I told him that I didn’t want to. He said to me, “You don’t understand. If you do this, you are out forever.”

I had an image of somebody taking away my name on the locker in the underground base, and I realized that if we are going to go into a win-lose position between the general population and the leadership, I’ll take my chances upstairs with the ‘hoi polloi’. I think for me, it’s safer there. Most of that is betting on your spiritual relationships as opposed to your political and financial relationships.

After 2010, the stings and the dirty tricks kept coming. I kept thinking of a line from Edna St. Vincent Millay who wrote in her collection of sonnets, “Wine from these grapes I shall be treading surely. Morning and noon and night until I die.”

I think that because of the extraordinary social and practical headwinds, it never occurred to me for the eleven years during the litigation that I would be engaging with deep state tactics for the rest of my life, and there would never be an end to it, and there would never be a break. So, it wasn’t until about 2012 or 2013 that I realized this is what we are all in for because certainly, as I said earlier, I’ve seen the application of those tactics spread to more and more people, and more and more people. As it does, I keep thinking, “Welcome to my world.”

The corruption in the United States – both the leadership and in the general population – is simply appalling. I now wonder if my current situation was not inevitable in the fact that I started in earlier than most, and it was not a blessing because now I have a much better map on how to deal with it. I can now come at it from a place which – for me – is both experienced and comfortable.

4. Next is the huge disappointment of so many people in the so-called independent media. First and foremost, within the financial community, many of the financial people who have been doing independent media still craved inclusion in the financial establishment, and they are guilty of so many material omissions. The material omission is that they don't want to look at the black budget because that is a 'no-no' in the financial community. So they are still, as Franklin Sanders would say, "Pining for the treats of the tapeworm."

Often many members of the independent media are easily tricked. They wouldn't be if they could network properly and listen. Part of my challenge, having worked at very high levels in both Washington and Wall Street, is I see people who don't have that background and experience being tricked by not understanding how the world works, and they are not willing to network or work with people who do have that experience. So, I see an unwillingness to share in a certain kind of way, and it causes people to be easily tricked.

There is a great deal of disinformation. You have members of the independent media who think it's perfectly respectable to get views by hawking disinformation. There is an unbelievable amount of fear porn that is not productive. You can't help somebody succeed by making them incoherent. Fear porn is fine to stress and help people face and deal with the risks, but fear is just not a productive way to go at anything.

There is not an understanding of actionable intelligence. There is no clarity about whether you are trying to be news, entertainment, or actionable intelligence. That is part of the way that the disinformation takes up far too much space.

One of the things that really helped me was working as an investment advisor for many years because I saw the implications and the costs in time and money to people of disinformation and fear porn. I've seen disinformation and fear porn literally destroy people's finances.

I had a wonderful experience working with many, many people and many, many families, and understanding what helped them be successful. That led to me being very strict about quality control on *The Solari Report*.

I'm not a fan of most corporate media, but I have to say that I have been disappointed in not being able to network and build a much more powerful networked presence in independent media that serves the audience with great integrity. But I'm going to keep trying.

5. **Mind control.** I completely underestimated the extent to which the general population would fall prey to continued propaganda and mind control, and to refuse to act in their own best interest.

It's like standing by the side of the road and watching thousands of people drive off the cliff with the bridge destroyed, and they are just flying off the cliff, and there is nothing that you can do to stop them.

I underestimated the control that could be engineered at the intimate level with digital technology. It continues to baffle and astound me every day. I continue to be hopeful that when it gets bad enough and obvious enough, that even though this technology is very invisible, as a society, we will start to understand it and do more to stop it, and the 'worm will turn'.

6. **Finding my own path.** When change accelerates at these speeds, you have to find your own path. It's a little like social bush-whacking.

One of the hardest parts for me was getting shut out of the profession I most love. I was a great investment banker; it's what my gift is, and I love doing it. But to do it, you have to be part of the establishment. You have to work for something big – big government or big corporations. I was a person who did a couple of hundred million dollar deals, and that was a tiny deal for me. I did billion-dollar deals, and I was great at it. I'm not an arrogant person, but I have to say that I never met an investment banker who was better than me. It was my craft, and I was gifted at it.

The hard part of finding my own path was finding a way to start a business and have a business succeed in things I'd never done before and are not my areas of natural talent. I have absolutely no natural talent at media. Basically, I lived in a world where I talked to perhaps 20 people, and even then, only on the trading floor and maybe at the Jockey Club or the Piping Rock Club or the Union Club or the Recess Club. It was a very small, quiet, intimate world.

The first time that I had to do a radio show that had a reach of a million people or more, I couldn't believe that I was going to talk openly about how the money works.

To start a new business doing something you've never done before that is not an area of your natural talent requires enormous persistence and hard work, and there is nothing hard about that for me. I love to work hard. But when you combine it with the headwinds and the whisper campaigns and the smears, and those translate into plenty of extra time and financial expense, dealing with ongoing deep state tactics from the opposition is very, very expensive. It's expensive in terms of moral; it's expensive in terms of money; it's expensive in terms of time. It makes it difficult to recruit a team willing to function in those conditions.

All of this takes time, and going from high-speed billion-dollar deals in a resource-rich world to slugging it out for inches in the mud, that was a very big adjustment, and it requires real spiritual grounding.

I am always reminded of the line from *A Course in Miracles* that has saved me in more situations than I can count. It says, "Nothing real can be lost. Nothing unreal is real." So you wander through the world, and as things disappoint you, you say, "I guess that wasn't real."

You just keep carving away the unreal and finding what is real, and you continue to build your life around whatever shows up that is real.

Helpful Strategies

These are the strategies that worked for me. You have to find what works for you, but these are the ones that worked for me. I recommend them for your consideration.

1. **Spiritual commitment.** We are dealing in an environment that is first and foremost, spiritual warfare. I am a Christian. Christ is the reason I'm alive, and Christ is why I look forward to tomorrow.

If you do not know Christ, I cannot find words to explain that to you. I spent many, many years studying Christianity and experiencing Christianity, and I'm not called to minister; it's not what I do. But you cannot understand, let alone triumph, in the midst of a spiritual war without an understanding of what is going on and what to do about it. How you find your spiritual understanding and your faith is your decision, but as the bubble that we have all lived in erodes, most of us are going to be called to confront real evil. I don't know how you confront or deal with real evil without spiritual power.

2. **Take responsibility and create your own vision.** This is one of the reasons I love Jon Rappoport's work. The way that you solve a problem is you take responsibility for it. You say, "This is my problem. I am going to own it." There is great power in that.

We have talked considerably during this series about the deep state wanting to create your vision for you. You have to create your own vision for yourself. No one can do that for you; you have to find it; you have to invent it; you have to create it; and you have to hold it in your mind.

3. **Stick with integrity.** Integrity is a journey. It works hour by hour, minute by minute, day by day. All the best decisions that I have made in my life are when I chose integrity. Oftentimes, it was a very intuitive leap. I walked away from what to many observing would have said, "That's not the clever or smart thing."

The example that I gave earlier in this series was walking away from corporate media. I got 'burned' very badly by *The New York Times*, and then burned very badly by *The Washington Post*. In both instances, we are talking about behavior, some of which is illegal or criminal, and certainly the potential basis of a lawsuit. I considered those enterprises to have no integrity.

One of the things that I learned was: Do not give a minute of your time to organizations that don't have integrity if you can avoid it.

Stick with integrity. It goes back to what I said earlier, "Nothing real can be lost, and nothing unreal is real." Things that don't have integrity aren't real. You can't count on them; you can't make a deal with them; you waste a huge amount of time; and they steal your time or worse."

4. **Free and inspired.** You have to enjoy your journey. Beauty and joy are necessary for survival. They are the well that we drink from for inspiration. So whatever is going on, I don't care how bad the deep state is, when nothing else would ease the incoherence of what the Department of Justice was up to, I would go behind my house to my cousin's cow pasture and talk to the cows or listen to Bach. The cows and Bach could always bring me back to coherence.

5. **Keep learning.** In a period of change, you have to have a higher learning metabolism. The learning metabolism in the groups that are, for the most part, excelling have the highest learning speeds. There is a direct relationship between the speed at which they try things and continuously learn and succeed. It is very real. It is very important to do that to stay in a higher mind. A higher mind helps you connect with others who are in a higher mind. The speed of learning is much, much higher. Part of that is just trying things and doing things yourself.

The ultimate deep state tactic is this: If the deep state can get you to help them ‘do dirty’, then they have you across the line, and it’s ‘kosher’ for them to ‘do dirty’ to you. It’s almost as though it’s built into the software.

If you don’t know the story of Job in the Bible, read it and learn it. Job was very clear: As long as he didn’t break with God, he was going to make it through and he was protected. The devil did everything he could to get that break, and he couldn’t do it. It was very much what I experienced.

Just remember that if you cross that line, suddenly you have put yourself in the basket of people that it can be done to. It’s important because, yes, there are risks, and yes, we should worry and engage in proper risk management, but your success will come from your ability to attract powerful protection and intelligence – whether it’s spiritual or human; you need both.

If you want to be the beneficiary of that kind of protection, including numerous miracles, you need to pay attention to staying behind the line. You need the love of the Lord, and you need the care and protection of other decent people because you care and protect them.

I try to be loyal to whom the real Boss is, and I try to be loyal to whom my real friends are. Don’t let the deep state trick you across the line. You will regret it.

The most powerful thing you need to get clear is who your governor is. Is your governor your government, or is your government your God? When the government and the spiritual laws get into a win-lose relationship, you are going to be called to choose.

Jon Rappoport did a great interview about vaccines where he said, “Doctors are being faced with a spiritual choice, and many of them are making the wrong choice.” That is the problem.

There is the government, and then there are spiritual powers and laws. When they get themselves into a win-lose relationship, you are going to have to decide.

I have a commentary called *Turtle Forth*. You can look it up in the library. Basically, the message of *Turtle Forth* is to ‘never, ever, ever, ever, never, ever, ever’ give up no matter what is going on. I don’t care how hopeless it looks, don’t give up, and keep moving forward. That is part of having a high learning metabolism. Never quitting is a force multiplier.

I would have a list of all the things that I needed to do, and when things were so completely hopeless and so horrible that I wanted to lie down and quit, I would look at the list and say, “What are the things on this list that I *can* do?” It was not, “What are the things that I *should* do?” or, “What are the things that are a priority?” but, “What are the things that I can bear to do?”

It might be cleaning your closets instead of responding to the latest subpoena, and I would do those. You wake up the next morning, and you have an enormous amount accomplished. It is a huge force multiplier, and you keep going.

There is a wonderful interview in the library called *Deep Survival* with Laurence Gonzales, which is the title of his book. It is one of my favorite books. You will see in ‘*The Books for 2020*’ in the *2019 Wrap Up* web presentation, that *Deep Survival* is in it. It has been in there many years. It talks about the practices of the people who survive what you think are unsurvivable wilderness experiences, and Gonzales brings it down to a series of characteristics and behaviors. It’s amazing. You discover that if you practice those in life – not only in your wilderness experiences – it’s amazing what you can accomplish, and it’s amazing what you can accomplish if you simply never quit and everybody knows that about you.

Finally, the **house game**. There is a game where you go into a big mansion with many rooms, and you write down on pieces of paper your possessions – one possession for every room. So if the house has 30 rooms, you have 30 slips of paper and you write down 30 of your possessions.

As you go through the house, you have to give up one piece of paper – one possession – until you get down to the final room and you have two pieces of paper, and you have to give up one. It’s sort-of a process of discovering what is important to you.

I went through a process – and off and on I go through it again – where you have to choose between freedom or death. You have to choose between your immortal soul or death. So, living through that gets you very clear about what is really important. I suspect that if you look at the extent to which we are going through dramatic change and, in some places, dramatic debasement, most of the people listening to or reading this are going to be forced to choose between freedom or death.

On more than a few occasions when I was forced to choose, I chose freedom. I was sure that I was going to die, and then the miracle would happen. So, don't let the walls close in on you, and don't get squeezed into doing 'a dirty' for the deep state or be afraid that you can't stand for the right thing.

Closing Thoughts

Anyone can learn to understand deep state tactics. Anyone can learn to protect themselves against them. You can, and I did.

I will say this: It helps if you are not alone – if you have spiritual forces on your side and you have a network of people to help you understand and navigate.

I hope and pray that we can continue to build a network of people who together can help each other navigate these times. I wish I could say that things are going to get better. On the contrary, we are headed into a period in which the battle for resources and control is going to get stronger, and we have very powerful forces intent on debasing humanity, and they have unbelievably powerful technology.

My faith generates optimism. I look back over my decisions of the last 25 years, and I realize how many times my faith sent me down, what turned out to be, the right road. It didn't look like the smart road; it didn't look like the clever road, but it turned out to be the right road – including the understanding that the plan for the unipolar model would not work, or to choose my love for the spiritually powerful instead of the financially and politically powerful, and to understand that the path required a faith in the law. I didn't start out with a faith in the law, but I found it, and I found a faith in reason.

I found a faith in people. No matter how much hatred or ugliness there is, I always believe that people are capable of excellence. I also have faith in myself and in my colleagues. So, I've been blessed on the process with many great colleagues and a few courageous ones who made an extraordinary contribution to what happened.

I have to tell you that my faith has always been rewarded. One of my favorite scriptures I've mentioned before is that faith is the substance of things hoped for but not yet seen.

Your faith is the ingredient that you use to create the future. You have to pour it out. It's that faith that creates and translates your vision into something that turns real.

It was interesting that one of the ways my faith was always rewarded was pouring out that faith; it was met by a steady progression of miracles. I believe that anyone can do that; you can do that; I can do that. That is the way the software works.

There is a power greater than the deep state, and I owe a real word of gratitude to my former colleagues in the deep state who, at every turn, pointed out where I had room for improvement. They were often right. Occasionally, they are still right. They forced me to find that power. I would never have done it if they hadn't forced it. In that sense, I say thank you to them.

That is why at the end of every *Solari Report* I say, "Don't worry about whether or not there is a conspiracy. If you're not in a conspiracy, you need to start one."

Ladies and gentlemen, thank you for joining me for *Deep State Tactics 101*. Goodbye and good luck.

MODIFICATION

Transcripts are not always verbatim. Modifications are sometimes made to improve clarity, usefulness and readability, while staying true to the original intent.

DISCLAIMER

Nothing on The Solari Report should be taken as individual investment advice. Anyone seeking investment advice for his or her personal financial situation is advised to seek out a qualified advisor or advisors and provide as much information as possible to the advisor in order that such advisor can take into account all relevant circumstances, objectives, and risks before rendering an opinion as to the appropriate investment strategy.
