# Clayton Nolte

Brigitte Mouchet

Clayton Nolte

**Guest:** Clayton M. Nolte

**Websites:**

www.ClaytonNolte.com: Here you will find all the research performed with Clayton Nolte's water structuring technology.

www.Structuredwaterproducts.com: This is where you can find the water structuring products developed by Clayton Nolte.

**Brigitte Mouchet:** Hi. This is Brigitte Mouchet with the Solari Wellness Series. Today I have the pleasure to interview an expert on water, more precisely an expert on structured water, Clayton Nolte. He joins us from Arizona.

Clayton, welcome to the Solari Wellness Series.

**Clayton Nolte:** Thank you. I appreciate it.

**Mouchet:** Clayton Nolte is a researcher and the inventor of water structuring technologies. He spent the last 40 years exploring physics, math, and the properties of water and the effect that it can have on health and life in general.

Clayton Nolte has a very important and, I think, empowering message for us. So let's dive in and see what structured water is and why it is so important.

To get started, could you explain what structured water is and why you got interested in this?

**Nolte:** Well, the water within you is structured. If it were not, you could not be alive. So what does structured water do? Structured water makes water available to your cellular level. The technology [water structuring] is meant to bring the viscosity of the water down to a place that it can enter into your cellular level.

The viscosity is measured in dynes. The dyne number to enter into your cellular level has to be 46 dynes or lower. So the majority of water – surface water, bottled water, processed water – is 72 to 84 dynes. In order for the water to get into your cells, your body has to make that water usable.

Back about 20-25 years ago there was a study done to determine for a 35-year-old man or woman to be hydrated the amount of energy their body has to put out in order to take water that they drink to be hydrated at the cellular level. If you can convert that energy to electricity, you could light your house up for a month just on that energy alone.

If you are 45, that number goes up. If you are 55, it goes up further. If you are 65 or 75 or 85, it continues to go up.

The ability to be hydrated comes down to the amount of energy your body can put in or has available to make the water you are drinking and/or bathing in usable at your cellular level.

What structuring does it bring that water to instantaneously available – whether you are washing your hands or whether you are drinking it or whether you are bathing in it. It does not matter; it is instantaneous hydration.

If you think about that, and then you look at what is water's mandate and what water is here to do, water is here to bring in the nutrients and carry out the garbage. So basically everything that you eat and everything that you drink goes out your elimination system. At your cellular level, your cells receive energy.

On the internet there used to be the availability to show you what this was. I looked for it recently, and I've not been able to find it. But it was a video showing that water comes into your cells and it enters into your aquaporin channel. When you are putting this into your internet, do not leave out the 'i'; otherwise you will be inundated with 'porn'. So it's aquaporin. That is the channel that receives water, and that water has to be 46 dynes or lower to enter your cellular level.

**Mouchet:** Is it the same thing as EZ water that Dr. Pollack talks about and the fourth phase of water?

**Nolte:** Everybody who has developed or has researched water has come to a place of developing their own brand and their own name, but the truth is that all it is is structured water. It has to lower the viscosity of the water down to 46 dynes or lower to enter into the cellular level.

If you want to do this on your own, you can place your hands on both sides of a glass of water, and you will lower the viscosity down to a lower point. It may not be instantaneous, but a lot of what that meaningfulness is is how energetic and how well you believe in yourself.

There are a lot of studies that have been done not so much specifically on self or individual, but most of the studies have been done on technologies like my technology. My technology brings water down to that level of just below 46 dynes, and it is done with a portable unit that you can hold in your hand and run water through it. But this is technology that people have taken on to understand it better.

Again, structured water brings in the nutrients and takes out the garbage. So the nutrients at your cellular level – when water comes to the aquaporin channel – unloads its nutrient density into the ion channel. So the water is carrying ions.

What are ions? Ions are the frequency of everything you eat and everything you drink and everything that is in the water itself.

For you scientists out there, you can't see water molecules. There is no instrumentation that can show you what a water molecule looks like. The closest you can get is this: Six water molecules in a row is one nanometer long. Instruments that can measure a nanometer are called interferometers. One of the most popular ones is a nuclear magnetic resonator. Not many people have them because back in the day they were about \$5 million apiece. I talked to a nurse recently who said that the price has come down.

It has the ability to measure the most important thing about structuring – at least initially – which is what structuring is doing in order to get that viscosity down to 46 dynes or lower. It is to change the hydrogen bond angle. A nuclear magnetic resonator (NMR) has the ability to measure the hydrogen bond angle. Most people don't do it because they don't recognize it and they don't understand it.

The hydrogen bond angle in structuring in my technology brings the hydrogen bond angle up to 120 degrees. This is hexagonal water, and there are a lot of studies being done on this now. A lot of knowledge is coming through the scientific world of what this can do for the human physiology.

When you drink structured water, again, hydration into your cellular level is instantaneous. All of the nutrients from the food you eat and drink is instantaneously available to your cellular level. When a water molecule coming to your cells unloads its energy in the form of ions into the cell, the cell makes the determination of what it needs. As that water molecule passes through the cell, it picks up the garbage from that cell which is taken in to the inside of the water molecule. All of the good energy – the nutrients – are taken back on the outside of the water molecule and carried to the next step.

You are not going to find much on this because there are very few who have taken water to this level. Again, it is primarily because you can't see it.

**Mouchet:** Yes, we are dealing with invisible stuff, so it makes it more complicated.

Just to summarize at a really, really high level, are you saying that structured water enables the body but also plants to take in nutrients and release and get rid of the garbage, so it's a great detoxifying tool?

**Nolte:** Yes, absolutely. Let me give you a number here. Again, the science of water at this level is theoretical. However, it has been proven that this is what happens. The water – to be perfect – is hexagonal water. That is six sides, 120 degrees.

**Mouchet:** That looks like what Dr. Emoto did. He took pictures of the snowflake.

**Nolte:** Right. You can get that same picture form observing the hydrogen bond angle simply if you have a microscope. On our website – and with every unit that we send out, we send the picture of this – is this picture that was done in Germany at a research institute where they took a 400 power microscope, something you would find in a classroom. I'm sure that in most classrooms they are more powerful than that. But anybody can acquire something this simple.

If you take a drop of your tap water and you put it on a microscope slide and let it dehydrate, then you can take a drop of structured water and let it dehydrate, and you will see the chaos in the hydrogen bonding of your tap water. The toxicity and all of these things reflect a chaotic energy or form that is created. That form is created from the calcium that is in the water. All water has calcium, by the way. So the calcium that is in the water arranges itself in accordance with the hydrogen bonding.

So tap water is chaotic. You go over and you look at the structured water, and you will see a six-pointed star that is hexagonal.

**Mouchet:** So structured water carries life force energy? Would you say that?

**Nolte:** Yes, and that life force energy can be in the form of prayer – if you want to go there. Everything that is beneficial to life the water molecule carries on the outside of its cell, making it instantly available to the cellular level.

There are institutions that just take water and pray over it and make it perfect. You can do this yourself. You can take a pitcher of water in a group and just pass it from person to person and have them put something beneficial into the water. But before you do that, I recommend that you have everybody taste the water before, and then have everyone taste the water afterwards. You can do this with a bottle of wine. You can do this with anything. You have the power to change all things to perfection.

**Mouchet:** I'm interested in detoxification right now. So how does this structured water work in the body to detoxify it without depleting it from the good stuff? When you take some supplements to detoxify from heavy metals, I think that it can remove everything, and then you need to take some minerals to compensate for the loss of maybe too much of those minerals.

**Nolte:** I have a simple statement here: Structured water energetically neutralizes all toxins, hydrocarbons, bacteria, viruses, molds, and pathogens *and* energetically enhances all nutrients, making them instantaneously available to the cellular level. So you don't have to worry about what's good; it is going to make it available to the cellular level. It eliminates everything that is erroneous or harmful to life.

Toxins hydrocarbons, it's simply the change of the hydrogen bond angle that eliminates them. But when you get into living organisms, which is bacteria, viruses, molds, and pathogens, how does structuring eliminate them? Primarily they thrive in areas where there is little or no oxygen.

When you structure water, one of the first things that you will see in your water glass is a significant amount of bubbles on the side of the glass. That is free oxygen. It is oxygen that is freed up from structuring the water. That oxygen going into your body will neutralize bacteria, viruses, molds, and pathogens. It also does it in your water glass. It does it in everything that you add this water to. You can do this to your swimming pool, the river, or the lake. Everywhere this water goes, it is going to eliminate bacteria, viruses, molds, and pathogens.

**Mouchet:** So is this just because of the hydrogen bonding?

**Nolte:** The hydrogen bond angle aids in changing the formulation of the toxins, of the hydrocarbons. It changes the formula of everything it comes into contact with. So primarily your tap water is holding onto the memory. The water remembers everything it passes through and everything it has passed by since it came out of nature.

**Mouchet:** Which can be good or bad.

**Nolte:** That water, holding onto that memory, is what is considered 'dead water'. It has no energy whatsoever. That is the water that the majority of humanity is drinking now and bathing in. So that is where your body has to make that water usable.

When you structure that water, all of that goes away. Structured water cannot carry toxins or hydrocarbons into your cellular level. It cannot carry it. It's against the law.

The act of structuring is water spinning and vortexing. In my technology it vortexes both left and right and up and down. It's a multiple vortex. Water at a high rate of vortex or speed changes the viscosity and changes the hydrogen bond angle.

So structured water, then, neutralizes the toxins and the hydrocarbons, erasing the memory of them. So the water can't carry that memory. It can't carry that energy. Those toxins and hydrocarbons go out your elimination system along with everything else physical that you eat and drink.

The only thing that a water molecule can carry is energy. A structured water molecule can only carry the energy of things that are good for life to your cellular level. That is the law. Water coming out of nature is the hydrological cycle. Basically water on the ground evaporates and goes up into the atmosphere and returns as rain. Up in the atmosphere it is structured and healthy. It returns as rain. However, 80 years ago that rain was perfect. You could bathe in it and swim in it. Rivers, lakes, oceans, and everything was thriving on that energetic water. It was super-energized and super-structured.

However, today hanging over your head pretty much anywhere on this planet is one to two tons of carbon. Carbon is acidic, and it is destroying our rivers, lakes, oceans, and everything on the ground. It's all being destroyed by acid. However, if you take that acid – that carbon – and put it into growing tomatoes, tomatoes thrive on acid, on carbon.

We have at our fingertips a clear path to having perfection. All of the stuff up in the atmosphere could grow food. The energy could be converted simply by structuring it. And it is happening all over the world by people who have 'seen the light' and taken this into their operations and their organizations.

There are potato chip manufacturers now structuring the oil that they cook the potato chips in, and what happens?

**Mouchet:** Are they healthier?

**Nolte:** What happens is the potato chips never go rancid. Take something like Cheetos. (I just love Cheetos and potato chips.) If you open a bag of any one of those, they are cooked in oil. Open a bag and just smell it to get a hint of the oil. It might smell slightly rancid.

Now I'm going to take you on a quantum leap here. If you have one of my devices, like a portable or a house unit that goes on your water line, and you take that water from your tap or through the portable and take it into a spray bottle. Put a little water in there and put the top back on. If you spray the outside of the package of your potato chips and/or your Cheetos, just before you do that, I suggest you taste your Cheetos or potato chips besides smelling it. Then spray the package and taste your Cheetos or potato chips and smell it. It will taste significantly different, better, and smell clean like the Cheetos or potato chips would smell fresh.

**Mouchet:** So without touching the food directly, it still has an effect because it radiates something?

**Nolte:** It's because hydrogen has no barrier.

A simple statement here is: When you structure water, you are increasing the hydrogen bond angle to 120 degrees (hexagonal). You are basically changing the atoms of hydrogen to be perfect. One perfect atom of hydrogen, every atom of hydrogen it comes in contact with is made in its image – perfect.

**Mouchet:** That is very interesting. So there is no barrier. Do you use that yourself at home to refresh and revitalize your food?

**Nolte:** Absolutely. And here is a simple one. You can take a glass of wine. First, take a sip of your wine, and then do the same thing. Spray the wine glass with that spray bottle or you can spray the wine directly or you can drop one drop of structured water or two or three drops into your wine, your coffee, your tea, or any drink, and it will change it.

It will make your coffee more balanced. In other words, it will remove the harshness of the acid. It will make everything more balanced.

**Mouchet:** So you can keep it in a bottle and it is going to last for a few days?

**Nolte:** It will last forever. If you want it to last forever, you want to put it in a cobalt blue bottle.

**Mouchet:** Is that because of the light?

**Nolte:** There are a couple of other colors out there now. There is a kind of purple or scarlet colored glass or bottle, but cobalt blue is a color that protects water from the outside world.

**Mouchet:** That is interesting.

**Nolte:** There is one more container that would protect water also, and that would be an egg-shaped container. You used to find urns as a container, and anything inside of that egg-shaped container would maintain its integrity.

**Mouchet:** That is very interesting. So you would recommend having that in your kitchen and just spraying all of your food with that.

**Nolte:** Right. And if you want to take this a bit further, if you have my portable unit or any one of my units physically, you can turn it upside down and blow air through it on your wine or your coffee or your tea or an injured joint or scratch or scrape or burn, and it will do the same thing; it will make it healthy.

**Mouchet:** Can we go back to some of the health effects on the body? I think I've heard you talk about the effect on blood cells and how it can carry oxygen better. Could you talk a little bit more about that?

**Nolte:** Yes. In fact, on my website, [www.ClaytonNolte.com](http://www.ClaytonNolte.com), I have a couple of research articles on blood. What happens to blood is it makes it uniform. It makes it extremely healthy, and it is very clear.

If you have a microscope, again, you can take a drop of blood, and you can see the difference in your physiology.

**Mouchet:** That basically helps everything in the body to function better?

**Nolte:** Yes, but you have to remember this: It took you how many years to get to the condition that you are in. Most people expect things like this to work instantaneously. It may take a little while for it to change your physiology and to correct.

**Mouchet:** Right. It has to rebalance the system.

**Nolte:** I'll tell you some of the scenarios here. There are basically three patterns. One pattern is: If you just accept this and know that it is going to work for you, and you don't have any preconception that it is not going to, if you can just allow it to do what it's here to do, it can change your physiology instantaneously.

If you need to know more detail, it takes longer. And if you absolutely believe that it won't work, it still will, but it takes longer again.

Basically this is changing the physiology, or the hydrogen bond angle is changing everything it comes in contact with – everything. It doesn't matter what you think, but it does. Thinking about it and adding prayer to it is being part of the solution. You can make things happen faster.

The big thing about structuring is that first and foremost it changes the hydrogen bond angle to open your cellular structure up to accept change and to accept everything that is good for life. It also has the ability to pull from your cellular level everything that is wrong or erroneous.

Again, it's all in energy and it is all in an energetic form. Your cells can't take on anything physical or anything electrical. All they can carry and all they can handle is energy. Everything physical goes out your elimination system.

**Mouchet:** So you are really saying that water is the basis for life?

**Nolte:** Absolutely. Water and air. Air is the same. If you are structuring air and breathing it or blowing structured air on anything that the air comes into contact with, air is oxygen and hydrogen plus other things. When you change the hydrogen bond angle, everything in that air is changed to perfect. When you change it in water, everything in the water is perfect. Everywhere this structured water goes or this structured air goes is made perfect. How far that goes, these are things that take a lot of technology and a lot of man power to figure out.

We figured out that one structured device [when water goes through it, or rather one drop of structured water] has an energy field. We measure it as biophoton energy. Basically your body recognizes it as 'chi'. It's similar to scalar energy, but that zero-point energy/scalar energy/longitudinal wave/chi has a field effect. One drop of structured water has a field effect of 1,000 feet in all directions.

**Mouchet:** Just one drop. So it's like the aura of the water? Is that the same thing?

**Nolte:** Yes, it would be the aura.

So where we have witnessed this is way back in a strawberry field in California. They were struggling with an area of their strawberries. The food value of the strawberries was so low that they couldn't market them. The food value of the ones that they were marketing was an 8, and you can look up the food value. This is another way of testing structured water, and it's with a refractometer. The measurement is in brix. The price point is determined by the brix.

The area that they couldn't sell was a 4.5, I believe. They put a structured water unit on that section of the field and watered it, and 48 hours later they checked, and the brix was a 9. Inside of a week all of the strawberries within 1,000 feet got up to 18. I believe 18 is where they were measuring it. The coup de grace of this is that strawberries are normally a seasonal crop, and they stopped picking and stopped watering and stopped the drip in the system of food, and the strawberries kept growing and kept producing. The strawberries candied on the plants from the sun.

Normally when strawberries are not picked, the white flies would come in and lay their eggs on the strawberries that would drop to the ground. At that range – 1,000 feet away – there were clouds of white flies, but they didn't come into the field effect of structuring.

The scientific points of all of this is that all food has a variety of healthiness to it. If you were to look at brix levels at a marketing level, 'poor' is the level where they can't sell it, and 'good' is where they would love to sell it because 'good' would give them a significant price point, the majority of food in the field doesn't even come close to that unless it's grapes and/or pineapple.

When the brix level comes up to the 'good' point for strawberries – and I believe for strawberries the 'good' brix level is 12 – at that level the food value is significant enough that if a white fly were to come and lay its eggs or attempt to lay its eggs on that 12, when they bit into it, the food value had enough sugar in it that it would turn to alcohol, and it would kill them. That is why the white flies wouldn't come to a field with structured water.

**Mouchet:** I also think I heard you say that plants that you water with structured water are shielded against dehydration from the sun.

**Nolte:** Yes. Again, this is because it opens up the cells of the leaves and hydrates them. It hydrates all life in the plant. That level of hydration prevents the aspect of the sun that is harmful from altering the plant – as it does for you.

If you have structured water in your home and you get a sunburn, you can take a shower with structured water, and the sunburn goes away. Physically it is because the sun has removed the structured water from your skin, and when you take a bath or spray structured water on that area of your skin, it reaccomplishes the hydration.

It does the same thing for virtually anything that is drying up. You can spray structured water on it and give it life back.

**Mouchet:** Would you say that it is the best moisturizing cream?

**Nolte:** Yes. Lots of moisturizing creams are now utilizing structuring to improve the longevity of their product.

**Mouchet:** Not only the moisturizing effect?

**Nolte:** It also eliminates the toxicity of their product.

**Mouchet:** Wonderful! There are a few more things that I would like to talk about with you. If you could say something about the effects of structured water on the pineal gland, that would be great. That is something that has always fascinated me. We all know that fluoride is having a negative effect on the pineal gland. If we could maybe restore it to its original state, maybe we would all feel better.

**Nolte:** Like I said before, the majority of humanity is clouded over by calcium buildup. Structured water causes a formula change in the calcium because the geometry of structured hydrogen basically brings the hydrogen bonding to 120 degrees hexagonal. Calcium contains hydrogen. So when you make the hydrogen in calcium structured, you are physically changing calcium. So that calcium – prior to structuring – adheres to itself and everything that it comes into contact with. It's a formula.

When you structure it, you are changing hydrogen, and it cannot adhere to itself or anything that it comes in contact with. So it places calcium in solution.

When you are drinking and bathing in structured water, the points [pains] in your body – and this also has to do with things like stiff joints – all of that goes away. So everyone who is engaged in structured water is experiencing a clearer vision. If you are out in nature, you can see, no matter where you go, how you function with a clearer vision – your pineal gland and your ability to clearly see what is truly here and what is truly out there. It gives you a significant advantage over anything that you have ever done before or engaged with before.

**Mouchet:** It's life changing.

**Nolte:** Yes, it is in so many ways. The more that you explore this, ask your higher self to be revealed the truth. It's a magical world out there. Believe me.

**Mouchet:** One more thing that I know people are concerned about right now is EMF. Do you think that structured water can also make the body stronger to be able to better resist against all of the EMF radiation that is around us?

**Nolte:** Absolutely. Yes. Primarily when water is being structured and air is being structured it produces a significant amount of negative ions. Once it is structured there is a significant amount of negative ions, and negative ions are primarily oxygen.

**Mouchet:** That is healthy for the body, right?

**Nolte:** Absolutely.

**Mouchet:** Negative ions are healthier than positive ions, right?

**Nolte:** Yes, and if you were to go back 10 years or more when a lot of places were pushing negative ion generators, they were actually generating ozone – which is harmful.

**Mouchet:** I remember buying one.

**Nolte:** It was an interesting experiment. You plug in a negative ion generator, and what does it do? It neutralizes positive ions. What are positive ions? Positive ions are bacteria, viruses, molds, and pathogens. They are all positively charged. Positive ions are also pet hair, dander, and dust. Most homes are super-charged with positive ions.

**Mouchet:** Especially if you have a TV on. Probably computers do that, too.

**Nolte:** Right. Electricity does that, as does fluorescent lighting, your carpet, and everything manmade. Electricity is manmade. Furniture and plastics. It goes on and on and on. So you are living in an intense environment of harm. You are living in positively charged ions.

The electricity coming in and the Wi-Fi is positively charged. When you put a negative ion generator in like the one we talked about – the ozone generator – what happened? Wherever that ozone was or was going, it made the wall black.

**Mouchet:** I was going to say that.

**Nolte:** It made everything black because a negative ion comes against a positively charged particle, and what does it consume? It consumes the hydrogen. So a positively charged bacteria or virus or mold or pathogen, these are living organisms. A good deal of their life force energy is hydrogen. So a positively charged bacteria or virus or mold or pathogen is small, it's similar to hydrogen. It is small. A negatively charged ion is huge. It's like oxygen. The way that this would work is the negative charged ion would come against the positively charged bacteria/virus/mold/pathogen and all of these positively charged particles and basically consume it.

The physical-ness would drop to the ground or stick to the wall, and the hydrogen would be consumed by the oxygen of the negative ion.

**Mouchet:** So the pathogen basically disappears, right?

**Nolte:** Right, and it can never be the same. It's true still.

Structured water creates a super dense field of negative ions – super-charged oxygen. It does it in the water, and you will see this when you pour a glass of water. The glass will have bubbles or the plastic bottle will have bubbles all over. That is super-charged oxygen – free oxygen. It is significantly good for your physiology, your health, and your well-being in the same way as the plants.

**Mouchet:** So, there are lots of things to think about that can improve the quality of our lives and support life. There are not many things that we find around us today that are supporting life and that are so easy.

It probably requires a little bit of stretch for some people to think that something as simple as that can have such a big effect, but I would say that it's worth a try.

Is there anything that you want to say about your products?

**Nolte:** Can I give my website? I gave you [www.ClaytonNolte.com](http://www.ClaytonNolte.com), and that contains all of the original research that we did. We did research utilizing the GDV (gas discharge visualization). It's a device made in St. Petersburg in Russia. The inventor is Dr. Konstantin Korotkov, a friend and colleague. We utilized that to measure the biophoton energy of water.

We also use it to measure the effect of the water on the human physiology. I will go into the detail of it if you want, but maybe at another time. It's complicated. What it does is it photographs, it is Kirilian photography. It goes into the photography of your fingers. With the program designed by Dr. Konstantin Korotkov and his 300 mathematicians at the University of St. Petersburg they developed a program that photographs your fingertips. So it has your physical body and five bodies above your physical body, all recorded and all showing on a computer screen. They use this technology in Russia. They have used it for years.

Every athlete, prior to going into performing, had to pass the GDV because it has the ability to see if you are psychologically prepared to be a winner.

**Mouchet:** Interesting.

**Nolte:** We use it, and we have a lot of studies on my website showing the use of it. One of the biggest, clearest pictures of it all is it has a program that shows your chakras.

Drinking a glass of structured water would bring your chakras to zero point – straight up and down.

**Mouchet:** Wow! So they would be perfectly aligned.

**Nolte:** Breathing structured air – just two breaths – would bring your chakras to zero point. In other words, that is saying that your brain is in regulation.

Also in this GDV program it had the left and right brain hemispheres, all of the organs from the tip of your hair to the tip of your toe reflected on a computer screen showing whether an organ is normal, pushing energy, or pulling energy.

One thing that I realized was that everybody in the United States who is on chlorinated water or fluorinated water, every US citizen has a thyroid problem.

**Mouchet:** And structured water can help with that?

**Nolte:** Yes.

**Mouchet:** That is wonderful.

**Nolte:** You can go on and on and on, but that is a way of looking at the human physiology, and this is what we utilize to know that our products were successful in correcting the human physiology. Where it goes from here, I've been retired now for two years, and I had initiated some programs prior to – which we are still engaged in – which are major affiliations around the world.

It's pretty magical what this can do. Personally I know that there is a whole lot more to do and a whole lot more to see and a whole lot more to accomplish with this. So my website is [www.ClaytonNolte.com](http://www.ClaytonNolte.com). My selling website for selling the product is [www.StructuredWaterProducts.com](http://www.StructuredWaterProducts.com).

We are having fun with it. Doing programs like this is a way to put the message out. I was in the Air Force, and I retired in 1979. I went back to work as a consultant until 1999. This technology has saved my life.

I had significant problems from being in the wrong place at the wrong time when I was in the military, and this has changed my health and wellbeing significantly.

My birthday was April 13<sup>th</sup>, and I turned 81 years old.

**Mouchet:** I heard that!

**Nolte:** I'm projecting another 81 years.

**Mouchet:** Congratulations! That is wonderful!

**Nolte:** When we send information along with this, there is information on [www.StructuredWaterProducts.com](http://www.StructuredWaterProducts.com). If people want to do more with this, there are avenues of affiliation. If you want to get involved, there are avenues for that also.

I am looking to do more, but more takes money.

**Mouchet:** Clayton, thank you so much for all the time you spent today with us talking about your passion. I think that structured water is a very simple way to improve our energy levels and health. I look forward to personally trying your products and seeing some great results.

**Nolte:** I will guarantee you that you will see and feel a significant change in your physiology.

**Mouchet:** I really believe that there is something to this, and it is reconnecting with the power of nature and the essence of life.

**Nolte:** And bringing us back to remember that we have significant powers of our own. We are nature. We just have to remember who we truly are. This water and this technology aids us in coming back into who we truly are. This water aids you to reset your DNA and your RNA. We have testimonies of people saying that their scars fell off.

**Mouchet:** I really look forward to this.

One last question for you: Is this a good protection against what is going on right now?

**Nolte:** Absolutely. Everything that is going on right now, whether you believe it or not, everything that is happening right now you can build up a barrier in your physiology that will protect you from everything that is out there.

**Mouchet:** Like a shield.

**Nolte:** It doesn't take that much. Primarily it's the rule of being hydrated. When you are hydrated and you breathe through your nose, all of the air that you breathe is structured.

**Mouchet:** So even without your device, the air is structured?

**Nolte:** Yes. Even without my device, when you breathe through your nostril, it spins the air. Your left nostril spins the air to the right, and your right nostril spins the air to the left. It structures the air you breathe. The moment that you breathe through your mouth, your physiology is determined by your immune system. Most people's immune system is severely compromised.

**Mouchet:** It was a real pleasure talking with you, Clayton. I wish you the best with your future projects. It is amazing to see somebody like you who created such important technology and who still has big plans for the future.

It's very inspiring and a wonderful message of hope for the situation in which we are all in right now. I really thank you and appreciate all of the knowledge that you have been sharing with us today. Thank you, thank you.

**Nolte:** Thank you, Brigitte.

**Mouchet:** This is Brigitte Mouchet with The Solari Report Wellness Series. Please leave your comments or questions on the blog, and we will respond as quickly as possible. Thank you for listening. Take good care of yourself because it's more fun to be well.

## **MODIFICATION**

Transcripts are not always verbatim. Modifications are sometimes made to improve clarity, usefulness and readability, while staying true to the original intent.

## **DISCLAIMER**

Nothing on The Solari Report should be taken as individual investment advice. Anyone seeking investment advice for his or her personal financial situation is advised to seek out a qualified advisor or advisors and provide as much information as possible to the advisor in order that such advisor can take into account all relevant circumstances, objectives, and risks before rendering an opinion as to the appropriate investment strategy.
