The Solari Report

January 21, 2020

**2020 Annual Wrap Up:
News Trends & Stories Part II
with
Dr. Joseph Farrell**

Catherine Austin Fitts: Ladies and gentlemen, welcome to *News Trends & Stories Part II* of the *2020 Annual Wrap Up* with the amazing Dr. Joseph Farrell. We had a great conversation last week in *Part I*. This week is *Part II*, and I would encourage you to go to the web presentation. You can follow along with the stories.

I will turn on screenshare and show you what it looks like.

If you go to the homepage for the *Going Direct* web presentation, every *Wrap Up* has its own web presentation; we build it on the web presentation. You can link to it from the commentary on the website, or just go to www.GoingDirect.Solari.com and use your *Solari Report* password to log in.

Last week we did the *Top Ten Stories Part I*, and this week we do *Part II: Culture, Science & Technology, Space, and Food & Health*. If you check out the web presentation, it will show you all of the headlines that we've used from *News Trends & Stories*. Our editors have done a fabulous job.

It's in TablePress; it's dynamic, and you can manipulate it. So, there is plenty of great information to assess what happened in 2020.

Joseph, welcome back.

Dr. Joseph Farrell: Thank you for having me.

Fitts: Have you gotten over the fact that we have finally now done our final *Trump Report Card*?

Farrell: I am over it. If you want me to do a Biden Report Card, I can easily do that right now. I will give him an F for all categories for all four quarters for every year that he manages to remain in office.

Fitts: No, I'm not planning to do a Biden Report Card.

Farrell: I think it's rather obvious what the result will be.

Fitts: Recently, he used the phrase, 'President Elect Harris'. So, I think the

question is: How long does Biden plan on being the President?

Farrell: That has been all over the place on the internet, speculating about how long he is going to last.

Fitts: It's odd because John Titus was afraid that they were going to appoint Barrack Obama as Attorney General, which would have been a very clever way to run things, but I'm sure he insisted not to. He would much prefer to manage his beachfront properties in a world of climate change.

Part II is Culture, Science & Technology, Space, and Food & Health. We have much talk about in these areas, particularly with the pandemic's food & health.

You have many strong suits, but clearly culture is one of them. We have three stories in culture, so let's dive in.

CULTURE

Story #11: The War on the Human Spirit (and Why in 2021 We will Nurture Family, Friends, Fertility, Community, Celebrations, Christmas, Easter, Churches, Restaurants, Financial Independence, Tenderness, Touching, Sex, Music, Concerts, Live and In-Person Everything, Art, Smiling, Laughing, Dancing, Group Meals, Hard Copies, Hugging, Travel, Generosity, and More Beauty and Joyous Things)

Farrell: Amen!

Fitts: We're all in church these days.

Farrell: I can't put it any better than that.

Fitts: We are in a war. We talked last week about this being a spiritual war, but there is no doubt that we are dealing with demonic occult forces, and they are trying to break our spirit.

Another great Rappoport quote: Last week I used his quote, “This is a 10,000-year-old war.” Another thing he said, and you were there at the 2014 Secret Space Program, was, “Hopelessness is an op, and it’s planet-wide.”

That is their goal; their goal is, “Give up; it’s hopeless.”

Farrell: “Knuckle under and follow us. We’re the hope managers.” Yeah, right!

Fitts: So, tell us about the war on the human spirit. What do you see?

Farrell: I see precisely all the same things that you do, particularly during this lockdown nonsense. They are trying to cut us off from humanity. In fact, they are running this public service announcement on the local talk radio station here that has come out from the CDC. You have to listen to this to believe the ‘in-your-face gall’ of these people. It has a cowboy/’hick guy’ playing the voice. “I’m one of you.” And it has all this soft, gentle, quasi-country guitar music playing in the background to make you feel good.

He goes on and on about, “If you don’t want COVID, wear your mask, definitely get the vaccine, be very careful about who you are around, and maintain social distance, particularly around people you know.”

Fitts: “People are dirty.”

Farrell: “People are dirty. They are carriers of viruses and germs and other things.” It’s just ‘over the top’.

Fitts: I have to show you something. I try not to get offended too easily, but the one thing that offended me the most in 2020 was Madonna in the bathtub.

Farrell: That’s not an image for 2:30 in the afternoon.

Fitts: There was someone at the CIA or someone who came up with this line, “We’re all in it together.” This is part of the magic virus; rich and poor alike, we are all in this together.

In two and a half months, the global billionaires went up 27%, but, “We’re all in this together.”

So, we did a poster series. Robert Dupper made a little COVID figurine with sunglasses, and it says, “We’re all in this together.”

We did these posters where we pointed out that the billionaires were up 27% and had made X trillion dollars. There was a picture of Steve Mnuchin and I said, “Steve, how are we all in this together?”

I have to show you this. I’m very proud of *The Injection Fraud*. Can you see it here? I had hoped that you would receive it.

Robert found this big horse syringe. So, our first section is ‘*The Pandemic Heroes*’, and one thing that was so amazing about it was when I saw the number of doctors and scientists who have stood up and done these amazing things. What I realized was what a difference they made. I think that they saved millions of lives. I really do.

The heroes were unbelievably inspiring. So, we go through the best sources and the best websites and everything, but in the back, we have a section called ‘*Pandemic Hypocrites*’. So, Robert put a little kitten in the bathtub. That is the quote, “We are all in this together,” referring to Madonna.

Then we have a list of the hypocrites. Let me read it:

San Francisco gym owners livid after discovering gyms in government buildings
have been opened for months

Neil Ferguson & his non-household lover (that was a good one)

Justin Trudeau breaks his Easter rules

Netanyahu makes Seder rules but does not follow them

Cuomo blames nursing homes for following his rules

Fauci’s tap dance on hydroxychloroquine

How US billionaires got \$637 billion richer during the coronavirus pandemic

Congress made hundreds of stock trades ahead of the pandemic

Public health experts say they support George Floyd protests because, “Racism
is worse than the virus.” (So, the magic virus doesn’t attack you if you’re

protesting race.)

Pelosi used shuttered San Francisco hair salon for blow-out, owner calls it 'slap in the face'

Chicago mayor visits her hairdresser

So this idea of, "We're all in it together." No.

Farrell: They don't believe it. Their actions indicate that they don't believe the narrative that they are putting out.

Fitts: John Titus made a great video only two and a half minutes long of the Pfizer CEO on the day of the launch of the Pfizer vaccine (or 'injection' because, to me, it's not a vaccine). He's having trouble keeping a straight face; he can't keep a straight face. They've reached the point where they are laughing at us.

Farrell: I know. What is sad and tragic is that as these stories and reactions to this 'vaccine' are coming out, some of these people are having really, really bad reactions. That nurse in Tennessee who took the vaccine and then fainted within fifteen minutes, and then came out and said, "Oh, no. I'm just prone to do that."

Really? You're a nurse in a hospital, and you're prone to fainting? That is 'nuts'!

Some lady in Spain who received it apparently died shortly afterward.

Fitts: If you look at the expectation with the Pfizer vaccine, it was assumed that most of the problems would be corrected with the second shot. If you look at all of the deaths and material-adverse events, so far, it's about 3%.

You're looking at something that is just the beginning.

Farrell: From what I've seen, healthcare workers in California – up to about 20% - refuse to take it.

Fitts: The French are now at approximately 60% who say that they won't take it.

Farrell: I don't blame them.

Fitts: But if you look at the information about the adverse events and the deaths, I can't believe that that number will not rise.

Farrell: I can't believe it's not going to rise either for the very simple fact that if you are messing around with messenger RNA, there is bound to be a reaction in a significant number of the population. This whole idea of 'tinkering' with people's DNA to make a vaccine is 'nuts'.

I think you will see much more of it.

Fitts: I think they are trying to download an operating system.

Farrell: I do, too. It's not accidental that Dr. Charles Lieber at Harvard, professor of chemistry and nano-technology, is involved in all of this. It's not accidental at all.

Fitts: I told you that the person who ran Operation Warp Speed was an injectable brain-machine interface expert.

Farrell: Right. I'm sorry, that 'ain't' happening here. Call me to your reeducation, but it's not happening here.

Fitts: I think it's very important in this environment to understand that somebody is literally trying to break your spirit. There's the plan, there's a goal, and there is an intention. You are in a war, and the way you win that war is you don't let them break your spirit. You nurture your spirit, and you nurture the spirit of the people around you.

Farrell: Let's talk about Christmas, since you wrote it in your outline. For years, what has bothered me about how most people celebrate Christmas is they leap right over Advent. We go out and gorge ourselves on presents and packages and food and so on, and the day after Christmas, the tree comes down.

If you are serious about it, if you are a Lutheran or an Anglican or a Roman

Catholic or Orthodox, Christmas lasts from December 25th through January 6th. That is Christmas. Those are the twelve days of Christmas – just like in the Christmas carol.

In other words, stop going along with the way the world celebrates these things. If your church doesn't pay attention to it, you do it. I'm sick of this, "Oh, Christmas is coming," and we start 'trotting' out all the Christmas decorations at the stores in October – before Halloween. It's just 'nuts'.

It's this attempt to materialize everything in the culture and make everything a material thing. It's not about that.

If you don't celebrate Christmas, then you don't have to worry about it.

Fitts: Here is the challenge: For many of us, getting together with each other and enjoying each other's company is essential for building our human spirit. The question is: How do we accomplish that in times like this?

Farrell: I've been thinking very seriously of doing another one of my 'Gizar Guys Get Togethers', only to get people together here and sit around and smoke cigars and talk about whatever we want to talk about – no agendas. You have to do that sort of thing, otherwise, there is nothing human in life to do.

Fitts: We are trying to inspire our local membership to gather locally. We've been working with hosts to do that in small groups.

Farrell: It has to be done. I'm convinced that Mr. 'Globaloney' is trying to shut down that activity for one very simple reason. If you look at the American Revolution, how did it really get started? It was started in pubs and tea houses and restaurants with people sitting around and ranting about the abominable behavior of George III. That's how it starts. That's what they want to shut down. They don't want people talking together and comparing notes.

Fitts: The other thing is if you are going to control the food supply, the restaurants are buying too much and control too much.

Farrell: Exactly. The point of the exercise is: Pull out of the habits of the

world because that world is being run by some very nasty people with a very nasty agenda. Start doing human things.

Fitts: One of the things that happened to me when I was in the worst part of the fight with the Department of Justice is I made a list called the ‘Beauty Tool’. The Beauty Tool was everything that gave me and my team joy that didn’t cost a lot of money. So in the good old days, you would jump on the Concord and fly to Paris for dinner. Those were the good old days. But in the Beauty Tool, you would go to a local café and pretend you were in Paris.

There are hundreds of things that we can do to nurture our joy that doesn’t cost much money. Make a Beauty Tool and build that into your day. Beauty and joy are necessary in an environment like this, and you have to create it; you have to build it; you have to do a spa day at home.

Farrell: I posted a little section of the *Dixit Dominus* by Handel in the forum today. One of my members remarked, “Oh, I just love this with the score.” It had the score in it so you could follow along. She said, “I’m waiting to get my baroque flute.”

I thought, “Good for you. That’s what you need.”

Fitts: That’s exactly what you need.

Story #12: Zombie Management 101: Interacting with Targets of Mind-Control, Fear-Porn, Hope-Porn, and Cults

Part of this is in your intimate space. You wake up and discover that your family is in the cult, and you’re not, and you have to part company. That is one problem. Sometimes you can’t part company because it’s your children, and your children are in the cult.

I had one subscriber’s siblings come home, and they had gotten the ANTIFA training, and they were bullying them. It’s quite ugly.

So, number one, it can be in your intimate space, but you can be walking down the street and run into one of these people who is seriously mind-controlled.

Consider yourself lucky because, at least they're not a Manchurian candidate who has been sent to shoot you.

Farrell: That may be coming.

Fitts: One of my fears of all the people they are letting out of prison is that I think they are moving their Phoenix Program (CIA program during the Vietnam War) armies into place.

Zombie management is something that we all have to learn. It's tricky. I put up a chart in one of the last *Money & Markets* and tried to explain to people that there are certain portions of the population who you can talk to, work with, communicate with. There are people who 'pine for the treats of the tapeworm'; they want to please their masters. There is no point in talking with them; there is no point in trying.

Farrell: I agree, but let's move the concept out wider. We are going through this huge cultural transformation they are trying to engineer. I think you are going to see the phenomenon of shunning grow. The other thing to be alert for is that you may wake up one day and find that the friends you had no longer want to be your friend.

Fitts: Oh, that already happened to me. I had a Rolodex of 5,000 people, and I was dropped by everyone.

Farrell: Be prepared for it to happen. In other words, they will practice shunning, too, and they already are. The whole COVID wearing the 'face diaper' is an exercise in that direction. So, they are inculcating fear of people who don't buy the narrative. Expect it to happen and grow.

The example I like to use is the flat earth people. Have you ever talked to any of those people?

Fitts: Yes.

Farrell: There is such a thing as invincible dogmatic ignorance, and you can't argue with it, and you can't persuade it. Don't waste your time.

I go back to what I said in the first part of the *Wrap Up*: You don't have to win the argument then and there; all you need to do is plant the seed. That may be a time bomb that will go off in their head years down the line. All you have to do is plant the seed, and then get out of there – nothing beyond that. It's not your obligation to convert everybody.

Fitts: Until COVID-19, I spent a great deal of time on *The Solari Report* trying to educate people and persuade them that mind control technology is very real. Since they got the cell network up, the establishment is emboldened by how successful it's been. That is real. I think that for many people, they couldn't fathom what I was saying, and now they can.

Farrell: People are insane, and a certain amount of that is coming from the soft mind manipulation through the media, and a certain amount of it has to be coming from the hard manipulation.

The other thing to bear in mind with these people is that you may be dealing with someone who is, in a certain sense, 'possessed'.

Fitts: I want you to talk about your book because I think your book, *Microcosm*, is one of the best books on mind control. It is certainly the best that integrates education and culture. In my opinion, you can't understand mind control without reading your book.

Farrell: It's called *Microcosm and Medium*, and it is a book available on Lulu. It's about mind control and mind manipulation technologies, and I include the arts in that, which most people don't get. The reason you are seeing so much ugly art is that it is a form of mind manipulation. It's a form of trying to get you to acknowledge as 'art' or something beautiful, something that isn't.

Fitts: It's the ultimate form of cults.

Farrell: People laugh at me, but I will not listen to certain composers because I think they are about the deliberate uglification of music. This is going on in all of the arts – the so-called 'high arts', not so much the popular ones, although we see it now happening in popular culture.

It starts there with the arts, but then it moves into the harder technologies – hypnosis and electromagnetic mind manipulation. People will be astonished that there has been a project I mentioned in the book that dates back to the 1970's and, of course, to the 'clowns' in America and their MK Ultra program of compiling electroencephalographic dictionaries being able to read the interior conversation of someone's mind by looking at the brainwave patterns associated with certain words.

In other words, they actually started this project in the 1970's. At the time that it concluded, they had compiled an electroencephalographic dictionary of the brainwave patterns associated with 2,000 words. Imagine what that has grown to now.

You can buy modulating electromagnetic frequencies with that brainwave pattern. You can also inject conversations.

If you think that some of these people who say that they hear voices are 'nuts', they may not be.

Fitts: I've spent a fair amount of time talking to and listening to the targeted individuals. Targeting an individual is somebody who has been under electromagnetic harassment. I dealt with it during my litigation, but during that process, I got to know many people who were trying to figure out the phenomena because they were dealing with it in one form or another.

For example, I found one program at HUD where if you were a Section 8 developer and had somebody who is elderly in your building and they are perfectly healthy, you would make \$800 a month. If you moved them to assisted living, you could make \$2,000 a month. Well, you apply electromagnetic weapons, and you can make them sick, and they don't know what is happening. The next thing you know, you move them to a \$2,000 spot.

If you get everybody out of that building, you can take it to market and make a large amount of money and sell it. So, you can make millions by flipping them into assisted living and reengineering your building.

There are many, many practical uses for this.

Farrell: This is one of the things that I talk about in the book. Most of the application of this technology appears to be in private hands for precisely those types of situations. It's not that difficult of a technology. One of the things that I try to do in the book is cite the patents for it. This is not make-believe.

Fitts: It's interesting. When Truthstream Media did *Minds of Men*, which was the *Documentary of the Year* two years ago on *The Solari Report*, they did a huge deep-dive on the patents. In their notes in the documentary, they have hundreds and hundreds of patents, and they list them all.

If you want to dive into this topic, we have quantities of material at *Solari*, and Truthstream has great information on that. I used to say to the targeted individuals, "There are 325 million targeted individuals in America, and they are divided between two groups – those who know that they are targeted and those who don't."

If you look at the people dealing with the extreme fact patterns, I think they were being used as guinea pigs to prototype.

Farrell: I do, too. I think there was a tremendous amount of trial run with all of this technology, and in some other famous cases, for that matter. The assassination of John Lennon shows every indication that that man (Mark Chapman) was being mind-manipulated. Sirhan Sirhan and Senator Kennedy is another one. There are cases like this all over the place. Jim Jones' The Peoples Temple is another example. So, this is very, very serious.

If you don't think it's real or that it doesn't exist, I urge you to get the book and read it. I hope that you will come away with at least admitting the possibility that there is something else going on with these 'crazy, nutty' people.

Since you mentioned it and have mentioned it in past *Wrap Ups*, I fear that many of the political class themselves are either victims of this or have voluntarily put themselves forth as guinea pigs for it. You look at the these people's behavior, as you mentioned in *Part I* of the *Wrap Up*, and their behavior is like babies. I don't discount the possibility that maybe, in addition to

the hard control file method of blackmail, there may be some severe mind manipulation going on with these individuals. I don't dismiss it.

Fitts: It wouldn't surprise me if many of them were chipped.

Farrell: Oh, I wouldn't be surprised either.

Fitts: That is why I try to make everybody watch the *Kingsman* to understand the technological issues. Part of it is when you mind control the field, the blowback is very significant.

Farrell: You are playing around with a technology, in my opinion, that they don't have an adequate understanding of how it affects, not only an individual, but a larger population. That is where the 'rubber meets the road'. I don't think they have fully grasped all the ins and out of that, but I do think that they are aware of it. This is why I think they have made such a push during the COVID plan/'scamdemic' against churches or synagogues having services. Most of those things are designed around the idea or the basis of building a voluntary group intention.

Fitts: When I dealt with the litigation, I had a fabulous church where I was studying spiritual warfare. I would be litigating all week, and was dealing with the audits and investigations and very bad physical harassment. It was very dangerous. So, I was dealing with high danger.

By the time I got to church on Sunday, I could barely walk. I was so energetically overwhelmed by dealing with this kind of evil every day, day in and day out.

I would go to church, and three hours later, I was on cloud nine thinking, "What's the problem? Everything is great! I'm going to be fine. Let's go back in and win this one." I would come out roaring with energy to go back to fight and win. I can't imagine what would have happened if I didn't have my church.

Farrell: The other thing is that there are subtler forms of this that I think are occurring, too. I've mentioned this before in these *Quarterly Wrap Ups*. Now and then, I get so tired that it's almost like narcolepsy; I fall asleep. I've had

other people tell me the same thing. I do think something is going on.

Fitts: It's demonic energy. That is what demonic energy will do to you. It happened to me a couple of times during the litigation. Literally, you can barely walk.

5G was invented by the Americans and the Israelis for crowd control. It was initially crowd control technology, not a telecommunications technology. 5G is now rolling out.

I think I told you this story: Verizon sent me a letter saying, 'We are prototyping our 5G rollout. We are going to be doing it in Pasadena starting December 1, 2018.' I received a phone call from a wonderful friend of mine in Pasadena towards the end of the month.

I said, "How are you doing?"

He said, "Not well. I think age is finally catching up with me because my mind is slipping."

I said, "Really? Tell me about it."

He said, "I'm foggy, I have trouble sleeping," and on and on.

I said, "Go get your calendar. Did this start on December 1st?"

He came back and said, "Oh my God! How did you know?"

I said, "Because that's when Verizon started rolling out 5G in Pasadena. You're not slipping, you're not aging; you have a 5G problem. You need to get an EMF expert over to your house."

So, what is 5G going to do to all of this zombie management 101? I think it could potentially make matters worse, particularly if whatever is in the injection then hooks up with the 5G.

Farrell: I think it not only could make matters worse, but I think you are

dealing with people who are so arrogant, and yet at the same time, so incompetent that the blowback from it could be in ways they have not anticipated at all. If you start suddenly seeing friends or family or a region of the country that you are in behaving in a very weird way, I would definitely look at that.

Fitts: That is one of the reasons I chose to live in Tennessee. I wanted to live with people who were really connected to the ground and concrete functions. I think that keeps you closer to reality, and I think it minimizes the ‘wackiness’.

Farrell: It does. The other thing that I think we have to look out for in terms of blowback that may not be in their thinking is geophysical reactions from the planet itself.

Fitts: This goes back to the living intelligence issue.

Farrell: Right, the pigeons picking the wires off of the 5G tower in Great Britain. I love that video because that, to me, is an indicator, “Oops! Something is going on here, and these birds are clearly upset about something. We didn’t anticipate this.”

They roll out the whole network, and then what is going to happen? We don’t know, and they don’t know. But I think it could be very, very significant in terms of human behavior and so on.

Fitts: The reason I get so upset about mind control, fear porn, and hope porn, and all this kind of thing is that I believe that to live a free and inspired life, you need to use your time and money well. So, you get up in the morning, and if your goal is to go to Rome, then you get a map that shows you the best way to go to Rome. It doesn’t lie to you about what is going on to try to go to Rome, but you end up in California.

Think about it: Can you imagine driving around the world with a map that is a total lie?

Did you ever see my map of the Island of California?

Farrell: No.

Fitts: You should see this. This was back in the 1500's, and somebody made a map of the United States showing California as an island.

Farrell: That's a good idea.

Fitts: The explorers would strip down their boats and carry them over the mountains, thinking that they had to sail across 'the Bay of California'. Many people would die because they had a rotten map.

It took the King of Spain to finally say, "Kill the map," because there were explorers all over the court saying, "We've sailed around the Bay of California," because everybody lies about their exploits.

You had this orthodoxy that was built up that was vested in a wrong map. It took an act of the King to say, "Kill the map," because, needless to say, the impact on the King's return on investment on exploration was dreadful.

So, I am big on this notion of a good map. In a good map, you don't waste your time and money trying to achieve your goal; you use your time and money well. But when you are completely 'snookered' by QAnon, or all the people who are talking you into making terrible investments on the theory that the world is coming to an end or any of these things, they cause mistakes in how we spend our money.

I'll give you a perfect example: There was a wonderful investment advisor who I was working with years ago. He was in a bad mood one day, and I said, "What's the matter?"

He said, "My mother-in-law just bought a really expensive car, and I'm upset because I'm the family bank. She really can't afford it, and if anything goes wrong, it's going to be on me."

I said, "Did you give her the entrainment transcript that I sent you from our *Solari Report*?"

He said, “No, I don’t share the conspiracy stuff with my family.”

I said, “You know something? It’s your fault. She bought that car online, right?”

He said, “Yes.”

I said, “They used entrainment to sell it to her. So she fell in a trap, you didn’t warn her, and it’s your fault. That’s not conspiracy stuff; that’s real.”

The reason we did that *Solari Report* was that I was struggling with clients who were absolutely in a state of high commitment to do things that had a 100% chance of losing all of their money. It made absolutely no mathematical or logical sense, but they had been marketed with entrainment.

So this is not about how the world works; this is about the fact that you have all sorts of corporate sources that are trying to make money by selling you things, and they have very sophisticated technology, or they are using politics to try to control and manipulate you. They have an enormous amount of technologies that can impact your mind.

For example, I think the way they got most of the cheap control files on the academics and the government bureaucrats was by using porn. So you bring somebody in on porn, you use entrainment to get them addicted, and then you bring them into child porn. So now, you have them on a criminal charge, and have a control file. In fact, you are making money doing it. It’s a beautiful system.

We are in an offensive war with people who have these kinds of technology, and we will have to figure out how to protect our mind and protect the minds of people we love.

Farrell: Not to ‘beat a dead horse’, but I think that one of the most powerful insulations against this is listening to good music.

Fitts: I couldn’t agree more.

Farrell: I even go into that aspect of things in *Microcosm and Medium*. I go

into all of those Soviet studies where they were examining the responses of people listening to different types of music or viewing different types of art. What they found was truly amazing.

Fitts: We are made of water, so it makes sense.

Farrell: They were much more coherent, and they discovered that people who listen to classical music have better language ability. They have a better ability to learn foreign languages and so on.

Fitts: It's important to keep yourself high and clean.

Farrell: Yes, and to cut out as much of the soft manipulation they are trying to feed you through the media. When I moved back here, I did not hook up cable TV; I refused. I don't listen to any of that anymore, and it has absolutely cleared out a lot of the news. When I do attempt to listen to it, or I go to a friend's house and they have the TV on, I think, "Oh, please. Turn this crud off."

Fitts: Let me ask your advice. For many, many years, I have tried to get subscribers to get rid of their TVs. We still have to deal with smartphones and computers, but only getting rid of the TV is a big help. One big block to getting rid of TVs are games – sports. So how do you help people get over the sports thing?

Farrell: You are touching on a subject that is a sore spot with me because I have never really been into professional sports. Back in the day, I watched a lot of tennis and golf because back then, you had people in those sports who had some character and integrity – Arnold Palmer and Jack Nicklaus and so on. Now they are only in it for the money and themselves.

If you are that into sports, go to a game. Go to a high school game or a college game. Don't support these big organizations that are using these sports events to drive their agendas.

Look at the NFL right now. We have NFL games going on in empty stadiums that used to seat hundreds and thousands of people. You have these teams on

the field, and nobody is in the stands, but you have a few cardboard cutouts of people in the seats and cheers and boos played on the sound system.

Fitts: It's weird.

Farrell: Get out of the virtual world, and get into the real world. Go to a game, and if you can't go to a game, have one.

When I was growing up, I had some friends— down the block from me — who used to just play baseball and softball in their backyard. They had their little diamond, and that is what they would do, and they had a lot of fun. Do that!

The other thing, since you mentioned games for the entrainment technology, is role-playing computer games where you shoot them up and all that. Those games, to me, are designed to program the youths who play them and get them very addicted.

I play computer games, but not that kind. The children get very addicted to them, and there is always some sort of subtle agenda going on in those games that is tied to the storyline somehow. I absolutely shudder to see these youngsters doing that.

Recently, since this COVID lockdown began, I've noticed neighbor children outside playing with their scooters or their bicycles and not doing the gaming. I absolutely think that is good. That is the 'Popsicle Index', as you call it.

Fitts: Story #13: The COVID Cult Radically Reengineers Childhood and Education

This is almost a topic that I don't like to talk about because it's so ugly. It's very ugly, and my view of it is darker than most.

Farrell: Let's hear it.

Fitts: You've heard me say this many times, which is parroting you, and that is you have to homeschool your children. Occasionally, I will hear about a school that is a real alternative, but if you look at what the schools are doing under

COVID-19, this is not an education now. I hear parents say, “Look, my kids want to be around their friends,” and I say, “You cannot let your child be indoctrinated into this. You cannot do that.”

The other thing is that you cannot let them go to school on Zoom.

Farrell: Right here where I live, almost every week there is a story on the local radio station that I usually listen to of some school district that has opened their classes back up. The children come in, and are anxious to get back into school and see their friends and so on. Then two or three days later, they say, “Oh, we had a COVID case. Shut it down,” and everybody goes back to the Zoom learning.

This goes flip-flop, flip-flop. How in the ‘name of sense’ do you expect anybody to learn in that sort of environment where you are responding to every little tick in the statistics? This is being run by babies.

Fitts: Here is the thing: I don’t expect them to learn in that environment even under normal circumstances because how can you possibly learn anything when you get up and move every hour?

Farrell: That is John Gatto’s (author and school teacher) famous critique, “Bells insulate you against learning,” was the expression he used, and it’s true. Just as you are ready to get into a topic in-depth, ‘bang’ goes the bell, and off you go to the next class. This is such a ‘screwed-up’ system. I will tell you again – and I’m going to get back on my ‘hobby horse’ here – it’s because they have made the profession of teaching a licensure. You have to obtain a certificate that you can teach. To get that certificate, you sit in classes of so-called ‘education’ and learn the most ‘mind-numbing, pablum, puking, nonsense’ for a methodology that you can imagine.

I want my English teacher to know English, not the latest educational theory from the University of Columbia- English.

They have created a false discipline called ‘education’, and they have created this certification process, which I think is at the core of the ‘rot’ of education in this country. If you’re in a country where they have those types of programs

necessary for you to be a teacher, you are in trouble.

Fitts: You combine that with usury, and you are in real trouble.

I want to look at the dark side.

Farrell: I thought we were!

Fitts: No, no, we have contact tracing, we have children going to school on Zoom where they can be surveilled and where they can be auctioned. All sorts of things can go on on Zoom.

We have indoctrination to a cult. So, they go to school and look at teachers with ‘face diapers’ on. So, you have teaching them to join the cult.

We are trying to mandate injections and other things, and school is a way to do it. So, we have poisoning going on. We have got rotten food being served there. And now people are talking about the possibility that the Pfizer injection may sterilize young women.

So, we are talking about poisoning, kidnapping, mind-controlling, which is is very serious criminal ‘stuff’.

Farrell: It’s so bad. I saw a story where in these so-called virtual classrooms, the teacher had instructed the parent not to be present. Number one, you are letting people have a view of your home. You are allowing them to invade your privacy to a certain extent. But I draw the line at any teacher telling me or anyone else, particularly parents, that they cannot know what is going on. As far as I recall, the laws in this country say that parents have the absolute right to sit in any class for any of their children.

Fitts: I told you the story of the teacher who told me that they were giving very bizarre surveys to the students— sex surveys. I put one up on the internet. They were under strict orders not to tell the parents.

It was in D.C. where they had the law passed, saying that an eleven-year-old child can consent to an injection without the parents’ knowledge. I think they

are trying to pass it in New York, as well.

Farrell: Yes, they are trying to steal our children right out from under us. I say, “No way!” And I don’t have children. But no way, no how. No.

These public-school systems, especially now that most of the academy has been captured by Gramscian Marxists (Antonio Gramsci) – I don’t know what else to call them. This whole critical race theory, and gender-neutral language movement, and on and on – all of this goes.

Fitts: The other thing is that we know they’ve been moving the 5G systems into the schools as well during this period.

So, you are sending your child into a brainwashing situation.

Farrell: And then you act surprised when they come back, and they share none of your values.

Fitts: My feeling is that you can’t do this to a child. You either have to homeschool, or get together with other local parents and find a way to create a modified homeschool together. If you are going to send children into this kind of institution, don’t have children. I tried for years to try to figure out how I could have children and make them safe, and I finally realized that I couldn’t.

You have to understand how dangerous this is.

Farrell: It baffles my mind why people can’t see it, especially in the ‘United Socialist States of America’. It’s so evident that every year the education establishment – the ‘edugarchy’ as Gary Lawrence and I call it in our book about Common Core – comes begging for more money. What do we get? We get more standardized tests, falling scores, children that can’t read, but who can talk about their ‘inherent privilege’ for racism or sexism or whatever it is that they are imbibing from these places. I’m baffled as to why people can’t see the racket that has gone on in the name of education in this country.

Fitts: The worst point for me was in 2019 when I was flying back from Bangkok. I’ve told you this story before. A wonderful subscriber from

California sent me a video of two mothers from California. One was organizing a group to prevent the new changes in the sex education program. They reviewed the materials and the curriculum that were used for the grade school students, and these are the same materials that the intelligence agencies used to teach children how to be sex slaves.

Farrell: That is exactly what is going on. They are sexualizing children. They are taking away their innocence, which to me, is the big gripe. They are sexualizing children at such an early age – before puberty – and making it sound like this is all acceptable. The only reason I can think of that they are doing this is they want more ‘fodder’ for their own perversions and proclivities and whatever else they may want to use them for.

Fitts: I told you in *Part I* that the nickname NPR attributed to the Pfizer vaccine dry ice suitcase was ‘pizza box’, and the trays inside ‘pizza trays’.

Watching the last year, one of my conclusions is that the establishment is deeply angry about Pizzagate (2016 election conspiracy theory), and this is a major payback delivered in all these things as it relates to children. It would not surprise me if the injections sterilized them so that many more children could be used as sex slaves easily and cheaply.

Farrell: I share the exact same suspicion.

Fitts: What I find with much of the general population is that they are unwilling to consider how dark this is.

Farrell: I go back to what we said previously. People are so cut off from the spiritual tradition of the civilization that they cannot even recognize the possibility of those kinds of people. Part of having a good road map is to understand that that kind of evil can and does exist.

Fitts: I love them because it’s so hard for them to fathom this kind of evil, but at the same time, I do want their children to be safe. I’ve seen the harm done to children from the vaccine injury and other poisonings. Their parents could not protect them because they couldn’t fathom that this kind of evil was really at work. We have to be able to do that if we are going to protect our children.

I'm saying this is very dark, and there are reasons you do not want a contact tracing app on your phone.

Farrell: Let's go further. If you look at these people who have come out and acknowledged that they were involved in some of these child sex slave/cult activities, there is one thing that runs through it like a 'red thread', and that is their zombie-like behavior when they were in those cults – the emotional void and the emotional vacuum and not being able to respond in a normal, human, emotional way to the abuse.

If you are a parent and recognize this strange change in your child's behavior or that they are becoming empty of emotion and narcissistic, I would look at your vaccines and your local school curriculum. If any of that is going on in your school, please get them out.

Fitts: The other thing is being aware of what they could run into online.

Farrell: Oh, absolutely. It's all over the place online.

Fitts: It's scary.

Farrell: The thing that upsets me the most is that we live in a culture that is so debased that Americans, to make and emphasize a point, have to resort to dropping 'F-bombs' or saying the 'S-word at every opportunity. I just booted a person off of my forum for language.

If you are old and mature, like you say you are, you don't need that kind of vocabulary to make your point. It's a small thing, but it's everywhere in the culture. This is such a debased culture.

Fitts: I told you that is why I got Emily Post's great grandson on *The Solari Report*.

They are very inspiring, and have a very interesting history. I forget what edition they are up to, but I have three editions; I have my mother's original.

Emily Post's great grandson, Daniel, who was on *The Solari Report*, gave a great interview. He was a microbiologist. Think about that, it is a great background for manners.

He and his cousin have written a new book on online manners. So, they are working away on everything.

Farrell: That is another small thing we can do in the practical culture. I keep warning people, "Get out of this gender-neutral language 'crap'. Quit saying 'humankind'; it's mankind, and that does not mean that you are excluding women."

Fitts: This was in my Twitter feed: In the opening of the 117th Congress, they ended the prayer with, "Amen and Awomen."

Farrell: That is so ridiculous. 'Amen' isn't even a gender term. Linguistically it's so 'nuts'!

During my time at Oxford, we had a marathon debate that was sponsored by Heineken and Guinness. It was for Ethiopian famine relief. The idea was to have a debate continue until you broke the world record.

I was in the chamber, and we were all getting up and doing our spiels. The lady who was the chair of the session in the union society interrupted me once and said, "Would you please use gender-neutral language."

I turned to her, and addressed her as 'madam chair subsistence'. I said, "We are going to avoid the term 'person' now. So, madam chair subsistence, I shall be glad to comply with your wishes when we take out every reference to man in the English language. So that will change the word immanent to 'impersonent', which rhymes with 'impertinent', which is what I find your whole scheme to be."

It's 'whack-a-doodle', and it's all in the name of getting people on board with a bigger agenda. This is what people don't get. I will go to 'my dying days' fighting this gender-neutral language 'crap'. It's phenomenal, and it's everywhere. It's not part – as far as I'm concerned – of polite speech.

I go back to what happened in Russia when the Bolsheviks took power. Most people do not know that the Bolsheviks launched this massive reform of the Russian language, and that included dropping certain letters in the alphabet.

Fitts: I don't know if you've heard it. A comedian came up with a routine that said, "Okay, it turns out that hard consonants spread the virus faster than soft consonants, so we are going to cancel the hard consonants on this schedule." Then he proceeded to try to speak the language without the hard consonants, and it is very funny.

Farrell: I sent that to you.

Fitts: Oh, you were the one who sent it to me! I laughed my 'head off'!

Farrell: I laughed my 'head off' too because 'people' have to be changed to 'feofle' and all of that. It's just so much 'twaddle'. The funny thing is that I'm convinced there are people out there who would take that seriously. If I remember correctly, that video came out because there was a 'serious' scientific study of plosive consonants and the spread of viruses. I think that was a video in response to this 'kooky' report that a group of 'scientists' sat around and came up with. And someone just said, "Okay. Here we go."

Fitts: That's why you have to laugh- this is a long-distance run. It's a 10,000-year-old war. So get ready to play long ball, and you have to laugh.

SCIENCE & TECHNOLOGY

Story #14: GMOed and Microwaved Humans: The Global Nonconsensual Experiment with Creepy Technology and 5G – the Biotech, Tech, and Telco Industries' War on Life

If you've ever studied the Nuremberg Code and the Nuremberg Principles, you realize that, literally, we are watching invisible technology that is free to wreak havoc with people's electromagnetic bodies and their physical bodies. It's an experiment. This is like all the things they accused the Nazis of doing, only this is much worse.

Farrell: This is much worse and on a much larger scale.

Fitts: It's the entire planet.

Farrell: I'll tell you what I suspect may be the agenda: There is a certain school of biophysics out there that thinks – and I happen to think this, too – that all organic life, including humans, that the body itself, is held together by quantum nonlocality. In other words, our cells react with each other through the phenomenon of quantum entanglement. I think that metaphor is actually behind the ancient view that the universe was not a big 'machine', but a big meta-organism of some sort. To me, that is a far more appealing way to look at the universe than the Western 16th Century Descartes and Newtonian machine version.

In any case, I suspect they are trying to so 'tinker' with life itself that it creates a different field in the planet. In other words, they are running a huge physics experiment in all of this to see if they can modify the group intention of all of humanity by 'tinkering' with these processes. That is what I think is happening here. That may sound crazy. It's another one of my 'hair-brained' ideas, but I can't see any other goal than that.

There is something that wants to do that to humanity.

Fitts: You are talking about controlling people at a sub-molecular level.

Farrell: Yes, and this is why those composers are so very important. In a certain sense, they may not have had all of the science behind it, but more or less, this is what I think is going on in their music. But they're not trying to produce incoherence and the breakdown; they are trying to build it up. It's the exact opposite intention.

There is something to this. I'm an organist of sorts, and Eric Dollard, who is an engineer that specializes in Tesla physics, is actually very fascinated by organs, and he has written about them. What he says occurring inside those large buildings where you have those big instruments is precisely what you are talking about. It is realigning the molecular structure of the water in your body and

doing things with it that put you back into alignment.

Fitts: I am absolutely convinced that the organ at church was part of a healing.

Farrell: I think so, too.

Fitts: It is a physical electromagnetic healing that is essential to keeping you coherent.

Farrell: I'll go further: If you look at the cruciform pattern of those large churches in Europe and the fact that they are made out of stone, the cruciform pattern itself is a three-dimensional analogue of what is called a tesseract – a hypercube. A hypercube, if you follow Dollard's reasoning, is resonating, not only the physical church, but it is resonating that church which is in resonance with the tesseract.

So, you are resonating hyperdimensional things through acoustics. I think that the same has to hold true with the body. They are trying to, I strongly suspect, break down that natural resonance that we have with the earth via what is called the Schumann cavity resonance. The earth resonates at about 8.5 hertz. I think they are trying to break down that natural electromagnetic resonance that all life has with the planet.

Fitts: They want us to resonate with the machine instead of with life.

Farrell: This goes back to what we said in *Part I*. This whole experiment is really anti-human, and it is anti-life. I'm convinced that we are watching the animal world react to this because they have certain sensitivities to the magnetic field, and so on, that we don't. You've mentioned Firstenberg's book, *The Invisible Rainbow*. I got that book, largely on your recommendation, and started reading it. I am only partially into it, but I'm already 'blown away' because what he is saying makes sense.

Fitts: Yes, it does.

One thing that I don't know if I've ever pointed out, is that I did a mega interview in 2010 with Clifford Carnicom at the Carnicom Institute. One of the

things he found when he was investigating the global spraying was that there was an electromagnetic artificial blanket circling the whole Earth, almost like a prison. It was very strange. I have no idea how it fits in, but there it is.

Part of this is that we see different people looking at injections that can change your DNA using technology that has been patented. The question is: Are we being GMOed, and can the patent holders assert ownership because of the GMO technology?

Farrell: I'm so glad you mentioned this because I've blogged about this a couple of times this last year. I am so glad to see this because this is the other thing that is disturbing to me. Does that injection give them a lien on your body? I don't put it past these people.

If you are trying to bring in a banking system and convert humanity to collateral, how do you do it?

Fitts: Strange as it seems, they have established the precedent. This is the Percy Schmeiser (Canadian businessman, farmer, politician) litigation where, if your GMO seed blows on his field, is he liable to pay you? Do you have any kind of property right over there because it's your GMO seed?

If you look at how bizarre that was, the question in my mind is: This is a precedent for something. What are they after?

Farrell: Right, and now the precedent is here.

Fitts: As strange as it sounds, this is something that they would do.

Farrell: Absolutely. Frankly, I'm waiting for something like this to come down. The key here is that they have exempted themselves from liability for their vaccines. That is telling me, at some point, they are going to press a case for complete or partial ownership of an individual based on the fact that they have received some sort of patented injection. I'm waiting for it to happen.

Fitts: Oh, I think they will give it a couple of years. They want to make sure that the operating system is installed and working.

One of the most interesting and disturbing interviews of the year was one that Robert Kennedy did with a doctor exploring the use of fetal tissue, including in the injections. She describes fetal tissue sourced from fetuses who were essentially born and then killed after they were 'harvested'. He was really blanching during the interview. It's quite shocking.

I am absolutely convinced that the push for abortion in this country and late-term abortion is to create more material for big pharma. In other words, it never had anything to do with women's rights; it had to do with a variety of issues, one of which was raw material.

Farrell: It was stacked functions. It was raw materials for their drugs and human sacrifice for their occult proclivities, and at the same time, it was a particularly insidious way of putting the boot down on women.

Fitts: Right. You are trying to destroy the Mary impulse.

Farrell: Exactly. I've had women who have had abortions tell me that it did some sort of immense psychological damage, not to mention the women who have suffered physical consequences from them that never get mentioned; the agenda is very, very sinister.

Let's put it this way: I don't want to mention who, but there are major political figures in this country – in a certain political party that shouldn't surprise us – that have major shareholdings in some of these types of institutions or pharma companies that are doing this.

It is a diabolical thing that we are looking at.

Fitts: One of my concerns, as you know, is that they are putting it into the 'fake' meat. This is how they get it to taste like 'real meat'.

We saw a real push several years ago in the Democratic states for late-term abortions. There was a real fight, and it was very much tied to human rights or women's rights. I don't think that women understood that it was really tied to getting materials for these injections.

One of the reasons there is so much disrespect between the leadership and us is that they will do something like this to get the fetal tissue. They will use women's rights as the excuse, a significant number of people totally fall for it, and then they think, "These people are as 'dumb as a tack'. Here we go. We got away with it again."

Farrell: Let's look at another aspect of this: I do not doubt that these people are capable of putting substance like that into their so-called 'vaccines' and not even put it on the label of the ingredients. But since we are talking about the zombification and crazy behavior of people, let's look at cultures where cannibalism is practiced. It makes them crazy.

Fitts: So, we are injecting aborted fetal tissue into humans, and injecting male DNA into females and female DNA into males. What is the impact of that?

Farrell: I can tell you from the transhumanism book that Dr. Scott de Hart and I wrote when we were researching all of this 'crazy stuff', we ran across this business of the primordial androgen. In researching that, I think it was me that discovered this strange phenomenon of women who are born with a Y chromosome. There are rare cases of this happening, but the result of that is these poor people go through life with weird, bizarre, physical ailments and chronic conditions that we can't treat very well.

So I have to wonder: If that is the case of people who are born for whatever reason with a Y chromosome who are women, what happens when you are deliberately injecting male DNA into women? What is going to happen to them intergenerationally or to their children? I think that it can't be good.

By the same token, why are we injecting female DNA into men? Is the agenda here like de Hart and I really thought? Is it really to try to get back to that primordial androgen somehow? I don't know, but I wouldn't put that 'wacky' agenda past them either.

Fitts: Let me bring up something energetic: What is the energetic intelligence of a fetus that has been murdered?

Farrell: I shudder to think, but I do know this: When the Supreme Court rendered their decision on *Roe V. Wade* in 1973, they tried to justify their decision by appealing to some of the writings of the medieval scholastics, like Thomas Aquinas. Aquinas held the opinion that a fetus is a human person at the quickening; around eight weeks. That is not the Church's position; the Church's position is that life begins at the moment of conception.

Fitts: The latest Church position is that fetal tissue in the injections is just fine.

Farrell: Oh, I know! That was another Pope Francis decision that came 'out of the blue', and it has much of the hierarchy rightfully upset. I'll tell you something that I was about to say in connection with the *Roe V. Wade* decision: The one tradition they did not look at was a tradition within the Christian church from the 2nd Century, and is that at the last judgement, any aborted baby will be sitting in judgment of those who did the abortion.

Fitts: Wow!

Farrell: All of this fetal tissue in vaccines, late term abortions, and Governor Northam in Virginia saying, "Even if the baby is born, after birth, a woman should have the right to decide whether she really wants it." It's abortion after birth.

Fitts: Post-birth abortion.

Farrell: I'm looking at all of this and can't help but see these stacked functions that you've talked about. They want the fetal tissue for these vaccines to change the field and on and on, and they are stacking human sacrifice on top of this for whatever occult purposes. Who knows what occult purposes they may have or intend with these so-called 'vaccines'. I believe the whole thing is diabolical and abominable, not to mention the suffering they are causing psychologically to the people who they've convinced to go ahead with these procedures. It's abominable.

Fitts: I was trying to keep up with the 'creepy' technology. We have a database at *Solari* called '*Dr. Gates' Creepy Technology*'. If you look at all the different things that they are trying and prototyping, you can tell they are trying many

things. They are throwing huge amounts of money at it. It is all – as Moderna would call it – to create the ‘software of life’. I think they will kill millions of people in the process of trying to use this.

Farrell: There is no doubt, and they are not going to ‘bat an eye’ or shed a tear. These same questions about patents I raised two or three years ago in the blogs about GMOs and the potential that existed for some of these things to reengineer human DNA, and I was laughed at. I got comments from people saying, “You don’t turn into a cow because you eat a roast beef sandwich.”

Yes, that is true. But they laughed at me because I said that you aren’t dealing with GMOs with ordinary plants; you are dealing with engineered things that have been designed to change and alter DNA.

Lo and behold, a couple of years later, somebody somewhere on one of my blogs did a paper where they had noticed genetic changes in people consuming large amounts of GMOs.

Fitts: I don’t know if you read the story of the doctor who died in Florida after he took the Pfizer vaccine.

Farrell: I heard about it, but I had not read it.

Fitts: You are talking about a body out of control. His platelets went to zero, and they couldn’t get them back up; this is an experiment. Many people don’t realize that the FDA did not approve any of these things; they are going out on emergency authorization. They haven’t been approved.

Even better, Pfizer won’t tell you what all the ingredients are; the ingredients are secret.

Can you imagine giving a corporation complete indemnification from all liability, and they don’t have to disclose what is in them?

Farrell: It’s nonsense; it’s breathtaking in its overreach.

I’m a person who, when I grocery shop, read the ingredients labels.

Fitts: I did this on *Money & Markets*, but I want to do it again, and it's only two and a half minutes. Do you mind if I show you the Pfizer vaccine video?

This is the day of the launch, so it must have been December 14th or sometime around there:

Interviewer: I want to ask you also about a very important issue of vaccine hesitancy. Even folks who get most of their vaccines normally might be hesitant about these vaccines because they were developed so quickly. What do you tell those folks who might be saying, "Oh, I'm going to wait a few months before I get this one"?

Pfizer CEO, Albert Bourla: I would tell them that the situation was not so critical so that they could have the luxury to think about it. The situation is as deadly as it could be right now.

Interviewer: You have not yet had your shot. When do you plan to get it?

Bourla: This is a vaccine that was developed without cutting corners from the company with 171 years of credentials.

I repeat once more that the decision not to vaccinate will not only affect your health and your life; unfortunately, it will affect the lives of others, and likely the lives of the people you love the most. These are the people who you are usually in contact with. So, I think you should trust science.

Interviewer: When do you plan to get it?

Bourla: The only sensitivity here, Meg, is that I don't want to have an example that I am cutting in line.

Interviewer: What do you tell those folks who might be saying, "I'm going to wait a few months before I get this one"?

Bourla: I would tell them that the situation was not so critical so that

they could have the luxury to think about it. I am 59 years old, in good health, and I'm not working in the front line. So, my type is not recommended to get vaccinated now. This is as deadly as it could be right now. I don't want to have an example that I am cutting the line.

Interviewer: When do you plan to get it?

Bourla: When I can, I will. This is as deadly as it could be right now.

Interviewer: When do you plan to get it?

Bourla: My type is not recommended to get vaccinated right now. Trust science.

Is that not great?

Farrell: It's a 'vonderful' vaccine. "Everybody is dying right now. We must get it now. There is a 99.83% survival rate, and this is out of control. So, we must get everybody vaccinated." Honestly! That is hypocrisy on parade.

Fitts: In the *Money & Markets* segment, before John Titus went back and looked at all the settlements that Pfizer made for fraudulent marketing, it is very much like JP Morgan Chase. This is their business model; their business model is fraudulent marketing. They do it again and again and again. Of course, it's the public-private partnership where the Department of Justice gets the kickback.

Farrell: It's unreal.

Fitts: It is unreal. So, this is a giant experiment. Einstein had that great line about, "The psychopathy of new technology is out of control."

We need to understand that the new technology is now being launched and used and prototyped, and there is nobody to stop or control it; it is out of control, especially once it gets in the hands of private corporations in the way that they have.

These people really believe they can download operating software into your

body, read your mind, and remote control you. It's that bad.

Any time that you think I'm exaggerating, just watch that interview with the Pfizer CEO.

Farrell: He doesn't want to take it because he gets to know what's in it; we don't, but he does.

Fitts: You can see how he feels about that.

SPACE

Story #15: NEOWISE and the Christmas Conjunction: A Shift in Human Leadership Creates New Possibilities and Futures

Let me start with **NEOWISE**. I got an interesting email from someone. I do two investment screens; one is *Solari World*, which is an ESG screen, and the other is space. This person wrote and said, "How can you possibly support space?"

I said, "I do believe in becoming a multiplanetary civilization, and if I were Mr. Global, I would not want to 'bet the ranch' on one planet."

I also think there are great resources out there in space. If you look at the law of diminishing returns on Earth, we want to access them.

I also think that people need new frontiers. Rappoport has this early discussion of, "Let's get in our spaceship and go and see what's out there."

I'm an explorer at heart, so I think that is a very good thing. But the reality is that part of it is that space provides a new frontier. I do think that we are going through a shift. The most negative part of my reality for my entire life is that you see an immense number of talented people who are trapped and stuck, whether it's by their world view or their finances, inside the Military-Industrial Complex.

One of the things about what is happening is that they are leaving. In other

words, whether they are getting thrown out, you have this whole wave of people leaving the Titanic, and every person who leaves creates and opens up new possibilities. When all of the talent is owned by the Military-Industrial Complex, it's hard to get anything done. So, 'Joseph and Catherine' can build their little arks and paddle away from the Titanic, but it has been lonely.

Now you are talking about thousands – if not millions – of really talented people who are also jumping ship. I think part of the question is: How do we go into space with that spirit of freedom, especially when you need big capital to do it?

Farrell: That is a good question. Just thinking 'off the top of my head' about it, I would imagine what you will have to do to make it not only viable but humanly bearable, there has to be a cultural component that you take with you into space.

Fitts: Absolutely.

Farrell: You can't just live on, "This is your exercise period, and this is your free period, and so on." No one wants to live that regulated a life all the time, which very much is what will be initially required in space. So, you have to have some outlet for creativity and some outlet for grounding yourself in the culture that you are from and the culture that you are taking with you. This is a very interesting thing to ponder.

If you look at science fiction, most of the science fiction that you read is rather bleak for one very simple reason in my opinion: It's Godless.

Fitts: I just read *The Three-Body Problem*, and that was exactly it.

Farrell: There was only one television science fiction series – and it is my favorite, and most people will know what it is – that is not Godless, and it is *Babylon Five*. You have watch that whole series from beginning to end.

Fitts: I ordered it. You told me that, and I have it in Tennessee, but I haven't seen it yet.

Farrell: You must watch it because it's an unusual series in that it was created with a complete storyline ark. In other words, if they bought the series, they had to buy all five years of it.

It has a real storyline with real characters, but one thing that emerges in the series is that J. Michael Straczynski-the man who wrote and produced this series-did not create a Godless universe. In fact, the whole theme of the show is that you find out in gradual pieces as you watch it that it revolves around what Rappoport is calling, "The 10,000-year war," and all the spiritual influences that work behind it.

It's breathtaking in terms of the concept of it. Some of the special effects are now very dated and somewhat 'cheesy', but the show is carried by the drama more than by anything else. This is what I think has to happen in space. If they think they will create this wonderful space paradise with a lack of anything transcendent, they have another think coming. That is not going to work because most of us don't function that way.

Fitts: I did a book review on a book about a woman from Iran who had moved to the United States and became a very successful telecom engineer. Then she decided that she wanted to become an astronaut. She was one of those people who paid to go to the international space station. She was clearly very competent. She wrote a book, but she brought the whole cultural issue to space with her.

I agree with you. If space is Elon Musk, I'm going to Mars and I'm not coming back, and if they install a Neuralink in the back of your head, that is not going to work.

Farrell: No, it's not. What is very interesting, since you bring up that topic, is if you look at some of the writing that is coming out now about how we do go out there and colonize, almost without exception, they are talking about fundamentally altering human nature itself in order to do it because otherwise, they are arguing, "We can't survive out there."

I'm saying, "No, that's exactly the opposite of what should be done."

Fitts: How do they believe that? I don't understand.

Farrell: They are talking about things like exposure to radioactivity, the effect of zero gravity environments on the human body, and so on. So, we have to fundamentally alter all these things to make it possible. I'm saying the exact opposite.

If you go into space and want it to be genuinely human, you take the entire environment with you. In other words, by 'environment', I am saying to not only have some method of artificial gravity, but to have some method of cultural environment. No one is thinking in these terms.

The materialistic transhumanist paradigm once again is assumed to be the necessity for doing this. I'm saying, "No, I think it is the exact opposite."

Fitts: Let me ask you this: For several centuries, there has been a real effort to put metal into our bodies. Is that connected?

Farrell: I think so, yes. Go back to what Scott de Hart and I wrote in the transhumanism book. If you look carefully at what the transhumanists are saying, they are really trying to crawl back up that alchemical ladder from animal to vegetable to mineral man, and then ultimately, back to the primordial androgen.

If you look at what is going on now with all of this transhumanism, you can see that whole agenda writ large in almost every step that they are making.

Fitts: If they can get enough metal into our body, what is it that they think we can do?

Farrell: For one thing, you increase – depending on the metal – the electrical conductivity of your body. Or, in the case of aluminum, you are actually shielding yourself from scalar torsion effects, which I think is very interesting because aluminum has been connected to Alzheimer's and neurological problems.

Fitts: I told you that I never understood the injection issue until I read Forrest

Maready.

Farrell: I'm not familiar with him.

Fitts: When we get into **Food & Health**, I'll describe it. He does a great job of explaining how injections are used to protect the insurance industry. He talks about how the injections do poisoning in general, but mainly protecting the insurance industry.

He has a book called *Crooked*, and it is an exploration of the introduction of metals to making people's faces and smiles and eyes crooked. It's quite extraordinary when you look at how much damage is being consistently done to the human race by all of this metal. It's essentially metal poisoning.

Farrell: Yes, heavy metal poisoning. In terms of space and the 'winner take all' game that is afoot in space, there are all these ideas.

Fitts: This brings us to the next story.

Story #16: Space as a War-Fighting Domain: The "Winner Takes All" Dilemma in the Race for Supremacy

We touched on this in *Part I*, but there really is an issue here.

Farrell: The thing that this idea of taking the cultural environment with you as a human necessity directly impacts on the idea of space as a war-fighting domain because, if you are going to convert it into a war-fighting domain, humans need something to fight for. I can't imagine the space soldier of the future fighting to preserve their Elon Musk brain chip. They may fight because they are ordered to, but there will be no passion to it.

I'm not even convinced that this idea of chipping people is going to be the total control they think it is. I think there will always be an aspect of the human person that lies outside of any ability to pin it down or fasten it down to a purely material form of reality or manipulation. We are quasi-transcendent beings.

Fitts: Matt Hale, a wonderful attorney from Washington, just wrote an update.

We did a '*Law & Space*' several years ago by David Lichte. Then Matt updated it to the latest law. What is amazing about space is that there is a legal framework. The U.S. has basically said, "We're not agreement-capable, so we are going to 'blow that out of the water', and we will proceed with building space weapons."

You now have a territory which has no legal framework. It's somewhat of a 'Wild, Wild West' and every man for himself.

Farrell: I think that space will be quasi-anarchical once there is a permanent human presence out there. I think it will be quasi-anarchical, and for that reason, if you are not taking a cultural environment with you, you are either going to have to create your own, or you are going to fall apart – one way or the other.

Fitts: It's will be a mess. If you and I are right about the Anglo-American Alliance, they have big money out there.

I've said for many years that one of the great fortunes of the 21st century will be created from the person who figures out how to do space debris clean-up. A group of Swiss entrepreneurs just created a company that has its first contract to do space debris clean-up. I am not surprised; the Swiss are the first.

Farrell: If there is anything they want, it's cleanliness.

Fitts: They are making space tidy.

I love it when you get off the plane at Zurich in the airport and take the underground train into the baggage claim. You are on the train, and they have cowbells and moos on the intercom. It's so funny.

I can see this spaceship going around with the cowbells and moo's cleaning up the space debris.

It's a private company, so I can't put it on the screen unfortunately, but maybe it will IPO. Who knows?

I think that this issue of space as a war-fighting domain is very serious because, if you put the Chinese and the Russians and the Americans into a real space race, we have a mess, and we have a mess that could lead to a first-strike capability for a number of different countries. That gets very dangerous.

Farrell: It gets very dangerous, and you have other countries involved in that race such as India, Japan, and Europe. The race to space is for that capability because, I think, you are absolutely correct in pointing out the first strike danger. One of the reasons that those treaties existed to prohibit weapons in space was precisely the idea of orbital bomb platforms; you simply drop the hydrogen bomb from space.

Fitts: The question on freedom is: How do you achieve it? We have a wonderful subscriber whose first job out of engineering school was a private rocket company. It took her a long time to understand it. A wealthy entrepreneur started it, and it turned out that he wanted to deliver a payload of sand to the suborbital platform.

Farrell: Interesting. A payload of sand?

Fitts: Yes, because then the satellites can't function. You kill the ability to build a sub-orbital platform around the earth. So, I think that would be very positive towards freedom.

Farrell: I do, too, but a payload of sand could do plenty of bad things.

Fitts: Another interesting thing is that I've been going back and forth with someone on email, and I want to read this. The Realtors Association is trying to institute a hate speech ban. "The prohibition applies to Association members 24/7, covering all communication – private and professional, written and spoken, online, and punishment could be a maximum fee of \$15,000 and expulsion from the organization."

My theory on this is that if you are preparing to do significant disaster capitalism, you want to make sure that the realtors can't say anything critical of all those people showing up from New York going after the land after the fire.

Farrell: That is very interesting, especially in the context of space. Any initial human presence out there is going to be rather limited, small, and closely contained. It strikes me that maybe part of the agenda behind all of this hate speech is to inculcate habits of speech that they think are designed to quell human passions. You don't want passions erupting on your moon base.

Fitts: I think the hate speech is that you want to stop people from being able to communicate and object to what is happening. So, if you have vulture capitalism happening in combination with weather warfare and other bizarre technology, it's absolutely essential to not allow people to talk about what is going on and connect the dots.

Let me give you a perfect example: After the Columbine incident, when the parents and other people would naturally get together and talk about what really happened and why it happened and how it happened, they inundated everybody with grief counselors. That was to change the conversation, not to what really happened and who got shot and who did the shooting, but to change the conversation to, "How I feel. Am I processing my grief?"

It was basically to get everybody to look at their 'belly button' instead of facing what really happened.

Farrell: My point about the language is this: In space, in close quarters, and in that environment, you don't want anybody saying anything that is going to trigger an incident where somebody pulls out their gun and shoots a hole in the space shield. If that is deliberate by design, then I think it is a system that is bound to backfire. You can't keep people under a 'pressure cooker' like that forever; it will explode in their face.

Maybe there is a space angle to it. I don't know; I'm just speculating.

Fitts: I'm bringing it up because it came in on the email while we were talking.

FOOD & HEALTH

Story #17: Pandemics and Bio & Chemical Warfare: The Great Poisoning, Insurance & the Injection Fraud & the 100+ Year Cycle

Continues

There are a couple of different ideas in here. I want to start with **‘The Great Poisoning’**. There is no doubt that the toxicity in the environment and in the general population is rising. I call it **‘The Great Poisoning’** because, if you look at many aspects of it, these are poisons that are intentionally introduced. There may be many reasons, but there is poisoning in the spraying, poisoning in the fuel, and poisoning in the food. We did a wonderful interview with a professor from Purdue University talking about these strange nanoparticles in the food. We have strange nanoparticles in the spray, and now we have strange nanoparticles in the injections.

There is no doubt that we are facing and struggling with a huge amount of toxicity. With that as a backdrop, we now have a pandemic –at least we are told – except it certainly doesn’t have the statistics or the death rate of a pandemic, and it is subject to a test that we know is worthless.

So your test is worthless, your death rate is very low, and the one thing that we can say is that it has totally healed the flu because there is no flu.

Farrell: A marvelous coincidence that is.

Fitts: So, statistically what we have is a bad flu, and every year the flu kills people. But the real question is: What in the world is really going on?

If you read Arthur Firstenberg (electromagnetic radiation and health), he thinks that this is a response to EMF radiation, which is possible. If you take the combination of all the toxicities in the spraying and the food and the pesticides and everything else and combine that with the EMF radiation, that is definitely something that could be occurring.

My concern is that whatever is going on, it is something that can be turned on and off.

I had a wonderful subscriber who works as an EMT in the Los Angeles area in San Bernardino County, which you know well. He wrote and said, “This thing has been a joke up until now.”

I got this email recently. He said, “Then a couple of weeks ago it was like somebody threw a switch, and now everybody is sick.”

Farrell: I said the same thing when this magic virus thing started because there was no consistent behavior to it. It was as if it was turned on here, turned off there, and there is no discernable vector to this. I’m thinking of Robert Koch’s postulates (causative relationship between a microbe and a disease) here. The initial behavior of it, you couldn’t discern any vector. They were even saying that themselves.

Fitts: It fits the description that Firstenberg gave of the Spanish Flu. This is not an infectious disease, it’s a combination of pathogens plus the EMF.

It’s very interesting. You will talk to some people who are absolutely adamant that there is a virus and that it is bio-engineered.

Farrell: I would not be a bit surprised. Even the public standard narrative has this coming out of Wuhan. The virology laboratory there is connected to the study of this virus. So, we know that. We also know that a Harvard professor was involved in it, and we know that Fauci was involved in it.

Fitts: Fauci financed it with our money.

Peter Breggin has a wonderful paper where he writes up and documents everything. Kennedy and Mikovits and a group did a Fauci two-hour session to go through all of these facts on Fauci; he is a real ‘desk killer’.

Farrell: My problem with him began back during the AIDS episode. He was pushing that whole thing. This man is ‘murky as all get-out’. Then there is his wife who is connected to ‘Bael and Malicious’ Gates.

The whole thing is bothersome because it looks like we are dealing, in part, with something engineered. It has some sort of electromagnetic component to it that allows them to turn it on and off.

Fitts: If you look at the statistics by county and across the country, New York

is a real hot spot, and L.A. is a real hot spot. If you look at the counties in Tennessee where I live and go to church, more people are dying of traffic accidents; it's a non-event.

It is very sporadic around the world as to where there are problems. At the same time, if you look at what they are doing with the testing and the death statistics; all the statistics are complete lies.

Farrell: Absolutely. They can't even agree on what the count is from state to state.

Fitts: This is what is important: If you are living today in the pandemic and looking forward to 2021, I think we are all facing a serious '**Great Poisoning**', and we have to protect ourselves. Don't worry about COVID-19; worry about the '**Great Poisoning**'. COVID-19 is only part of the '**Great Poisoning**'. You are a target of a '**Great Poisoning**', and you have to protect yourself from it. That is real. Part of it is chemical, and part of it is EMF radiation, and part of it may be biological.

I think that Rappoport is right. I think that chemical warfare is much more easily managed and controlled than biological warfare. So, whatever we are dealing with, it is much more likely to be chemical warfare.

Farrell: I agree with that. It's one of the main reasons I switched to buying as much organic food as I can budget for. I just don't trust the meat supply from big chains.

Fitts: I used to, but I don't now.

I've told this story before, but I will tell it again. When I dealt with serious physical harassment in Washington, I tried to hire a private investigative firm to help me because I was out of my element. I was concerned about electromagnetic weapons because I was told they were being used on us, and I had all sorts of weird experiences that indicated that might be true.

So, the firms kept showing up. They would be very interested, and then they would say, "We want a background check," and would come back and say, "No,

it's too dangerous," which was very inspiring.

The last one (investigator) brought with them a biological warfare expert. I thought, "Why do I need a biological warfare expert?"

As they were turning me down and saying, "It's too dangerous," and leaving, the biological warfare expert turned to me and said, "Look, lady, do yourself a favor. Buy birds."

I said, "Birds?"

He said, "Yes. If the birds die, get out of the house."

Farrell: Interesting.

Fitts: I had a dog, and then bought birds. My old college roommate came to move in with me for safety. I lived in a brick building. He said, "What they are going to do is drill holes in your walls, and then they are going to inject low-grade biological warfare."

Sure enough, they drilled holes in the wall, and I was sick for a year and a half. One of the reasons I finally closed the house and left was to get on the road. I started moving on an unpredictable schedule because I was trying to get away from the low-grade biological warfare.

But here is why I tell this story: When I was sick, it had this weird, synthetic feeling; it didn't feel natural. I've never felt like that before or since.

In February, everyone here got sick. I'm in the Netherlands, and everybody got a nasty, bad flu. It had that same synthetic feeling. That is the only way that I can describe it. It's weird, and other people have described the same thing to me. It has this junky, synthetic feeling.

Farrell: It sounds very familiar. I have a friend in 'Nutty-fornia' who is a Morgellons sufferer. He describes similar things and experiences as well as this occasional narcolepsy, and it has a weird, synthetic feeling to it.

Fitts: Sometimes I think they don't want us talking to each other. Suddenly, work is done, and then all we want to do is sleep. Then Monday morning, we are 'fired up' and ready to go back to work.

I want to talk a little about '**Insurance and the Injection Fraud**'. I read Forrest Maready (*The Moth in the Iron Lung...*), and you have always heard, "Well, the polio vaccine worked. Look at how many lives it saved."

So, Maready explains how the polio vaccine works. The U.S. uses DDT, and it causes neurological damage. Given how much DDT they've used, if this is attributed to DDT, then the insurance industry could go bankrupt by the liability. So it's really simple. You declare that the toxicity symptoms and neurological damage from the DDT are a disease caused by an 'invisible virus' (the 'magic virus'), and then you get a group of people to make a 'vaccine'. You give them the vaccine as you are stopping the use of DDT. You will stop the use of DDT, but you have to find a way to do it where people don't realize that that is what caused the problem. Otherwise, it's going to be hundreds of billions of dollars.

So, you introduce the vaccine while you are stopping the DDT; you have a huge success and say that the vaccine works; you give Nobel prizes to the people who invented the vaccine, and say that you've healed polio.

Well, what you've done is healed the insurance liability. It's a business. The lives you save are the lives of all those insurance executives and their shareholders. Maready absolutely 'nailed it'.

When you look at it, it's a very clever game.

Farrell: Sure, because no one would think to connect the two.

Fitts: So, let's say that you are worried about 5G doing to people what happened with the Spanish Flu. Going into the 5G wave, you create the magic virus. Then you have the 5G rollout, and many people die. But then the vaccine becomes prevalent, and you attribute the success to the vaccine.

Remember, the insurance industry has already disavowed 5G; they are not

taking 5G policies. So, the companies are liable.

Farrell: As I recall, that started with Lloyds of London.

Fitts: Lloyds of London was the first that said, “No, we’re out.” They remembered the Spanish Flu; they knew what that looked like.

I don’t know if you have looked at any of the vaccination plans in the United States, but I read one for a state, and it reads like an insurance industry relief act. The first people are the health practitioners. The second ones are the nursing homes and the assisted living people. Then you have the sick, and then the elderly. So, it’s anybody who is drawing on their insurance policy for their nursing home or going to the doctor. In the meantime, nobody can go to the hospital or doctor, but the insurance companies are still getting their healthcare premiums.

Farrell: This has happened to my friend, Scott de Hart. His mom became ill recently, and they weren’t able to treat her because of all the COVID patients – which is just ‘nuts’.

Fitts: Except that there are none.

Farrell: It’s a racket. Talk about crony capitalism – this is it.

Fitts: Except for this: If you go back to the financial coup, they decided they wanted to spend the money on space, not nursing homes. So, they moved all the money out. Now the money is gone, but the demands for nursing homes and hospital care still exists. So how are you going to get rid of that since you’ve stolen the money?

Farrell: Get rid of the people.

Fitts: You get rid of the people and break the connection legally; you kill the pathways.

We were talking about Brexit and all these other things. You are trying to get that money so that no one can ever see it or demand it back. If you get it into

the suborbital platform, all those nice bankers at JP Morgan Chase aren't going to see it.

Farrell: They're not. Let's put that point differently: At some period, don't be surprised if they open up a central bank in space.

Fitts: That is interesting because they could do it now without saying it.

One of the reasons you need a central bank on the planet is that you need somebody to interact with the central bank in space. SSDRs (Solid State Data Recorder), here we come!

Farrell: SSDRs – emphasis on the 'SS'.

Fitts: Here is the question on the pandemics and biochemical warfare. I want everybody listening to or reading this to be prepared to aggressively deal successfully with the **Great Poisoning** because there is something here to worry about. That is number one. Number two, when I met with the doctor and scientists of the World Freedom Alliance, their number one concern was, "Most of the serious things to happen have not happened yet."

They are worried that this gets much more serious, both with the pathogens and the EMF; 5G is just beginning. So, whatever the toughest 'sledding' is, it is still ahead of us.

Farrell: That is interesting. Is that connected to the story that has come out now that there is another strain of the COVID virus that is far more lethal?

Fitts: It might be, but they weren't focused on that. What they were focused on was with the second Pfizer shot, when the real trouble is going to hit.

We've seen plenty of trouble on the first shot.

Farrell: Not just with the Pfizer, but with the Moderna as well.

Fitts: They are very concerned about what the injections are going to do, particularly the Pfizer second shot. So that is number one. Number two is the

5G and EMF radiation and the possibility that it will do to the population what Firstenberg described during the Spanish Flu.

The third thing is that if people resist, the way to break their resistance is to ‘pile on’ the pathogens. So, if they do have the ability to turn it on, go ahead and turn it on.

Part of this is that whatever you are injecting into people’s bodies, when that material combines with whatever they are doing with the pathogens and the 5G, you are making people weaker and you are making the weakest people weaker.

I forgot to mention that on the list were the indigenous and poor people – the heavy government subsidy people.

So, once you pump whatever that poison is into the body, they are even that much weaker and more susceptible.

Farrell: That is an interesting thing because it now has me wondering. With Pfizer, we have a vaccine that we don’t know the ingredients of, that they have no legal liability for, and it makes me wonder if the first injection is just the weakening injection to be followed by the real ‘whammy’ to come with the second injection.

In other words, is this really an ‘in-your-face’ genocide operation?

Fitts: It could be. If you look at the design of who is to get it first, it absolutely could be. But I don’t think that the number one goal is culling; I think that the number one goal is to figure out how to do the operating system.

It’s an experiment; it’s a prototype; they are making it up as they go.

Farrell: I think you are right.

Fitts: Looking ahead to 2021, the **Great Poisoning** is going to increase in intensity. We could get either hot spots or – if they are ‘pushed to the wall’ – they could turn on a real pandemic if they wanted to. So, if we won’t pretend there is a pandemic, they might be willing to turn one on. I think we all need to

be ready to navigate.

Think of it this way: We are in the middle of bio- and chemical warfare, and we need to play to win at that. We can't just 'pooh-pooh' this and say, "Oh, well there is no pandemic." That is true, but there is a war, and past is not future here. We are in a process that is going to go on for a couple of years, and if you look at what they are trying to do with the new financial system, it will take a couple of years.

This war could get very dirty and very ugly.

Farrell: I think it probably will because already the planned 'scamdemic' narrative is really breaking down. So, it's going to get ugly.

Fitts: How are you going to overcome the **Great Poisoning**? I think that is the question. You certainly don't want to be on the list for elimination for the 'Insurance Relief Act'.

Story #18: The Freedom Tsunami: Doctors, Scientists, Sheriffs, Lawyers, and Independent Media Push Back Successfully on COVID-19

That's why I wish you had a copy of this *Injection Fraud*. We thought that everybody would have it by now. It starts off with a section called 'Pandemic Heroes', and it's page after page with their pictures and bios. I didn't realize until I put this together and saw all of these people in collaboration, and what they had accomplished individually and collectively that these people have saved millions of lives.

Farrell: I believe that, too.

Fitts: They were all absolutely fearless. Some of them were fired and lost their jobs, but when you see them all together as one group of people, it is so inspiring. You realize that we can be a great people; we have that in us.

My favorite quote of the year was Dr. Stella Immanuel, who is a doctor in Houston. She had great success with hydroxychloroquine. They sent this 'smartass' reporter from a Houston TV station to interview her and try to

intimidate her. He was a real hitman.

She said, “I’ve given this to 400 patients as early intervention, and they totally healed right away. Only one went to the hospital, and they didn’t die.” She had these incredible results. She had been trained in Africa where she’s originally from. So, she knew that everybody there uses it. She has deep knowledge and understanding and networks who use hydroxychloroquine with great success all the time, and it’s an old and safe drug.

This man leaned into her and said, “Well, if you keep using this, you could lose your medical license.”

She leaned back into him and said, “How many people should I let die so that I can keep my license?”

He backed up and realized that he was in trouble. She understands what a doctor is, and she understands what a doctor’s oath is, and it’s real.

I think that every time that we can encourage and support and nurture these people, we need to do it. I know you’ve tried to do it all year long, and I’ve tried to do it all year long. We just need to keep doing it. What a difference it’s made!

One of the Top Videos is from a German man, Dr. Sucharit Bhakdi, a microbiologist. He wrote a book with his wife, who is also German. The book is called *Corona: False Alarm*. This man is so respected in Europe, and he was on with Laura Ingraham. She said, “What do you think the most dangerous thing is?”

He said, “The vaccine. You would be crazy to take it; it’s really dangerous.”

He was so blunt and so courageous.

Farrell: Good for him.

Fitts: His wife got him started on it. They have a young child, and she said, “We can’t let this happen.”

Farrell: You know that this whole plan/‘scamdemic’ is a plan/‘scamdemic’ just from what happened in Germany recently when they passed a healthcare version of the Enabling Act – the Enabling Act that made Adolf Hitler dictator. They handed the German government to Angela Merkel to use the healthcare COVID thing to shut down anybody who disagrees.

Fitts: Here is the peculiar thing, and this brings us back to where we started in *Part I*: If science is made up and invented out of thin air day-to-day; so today it’s science to wear a mask and tomorrow it’s not science to wear a mask, if there are no rules and nobody is agreement-capable, and facts don’t matter, you are in a world where, not only do your rockets fall out of the sky, but you can’t transact financially.

Farrell: The thing that bothers me the most about these people like ‘Joe Bribem’ and his ‘follow the science’, is that science is not monolithic.

You have some doctors who say, “Yes, this is a real thing,” and, “All of these precautions are necessary,” because that is what they think. They’re not coming by that opinion dishonestly. But then you have doctors who say, “No, there is this body of facts that supports our position.”

So it’s not monolithic. People have to get this out of their minds that Anthony Fauci is the only one who can interpret this science; he’s not, and it’s not a monolithic body of knowledge.

Fitts: Fauci is not a scientist or a doctor; he is a ‘desk-killer’; his job is to invent fake science.

Farrell: This is the problem with what science has become; it has become a big, corporate narrative. We saw the same thing going on with GMOs and the so-called ‘science’ behind all of that until people started asking, “Where is the intergenerational testing that you did?”

“Well, we don’t have any.” So that is the problem here.

It was these independent scientists who stood up. The anti-GMO thing began with some farmers in Denmark and some French doctors who had the guts to

come out and speak up about it.

Fitts: Story #19: Food Fight – Disaster Capitalism, Trade Wars, Regulatory Warfare, Synthetic Food, Restaurant Bankruptcies – Will We Allow the Global Food Supply to Be Centrally Controlled?

Let me mention two stories that just happened. We saw the health department in the U.K. going door to door to kill chickens owned by families privately. So, you have a chicken in the backyard, and they are showing up and killing them. You can't get your own eggs.

Argentina just announced that they are shutting down the export of corn. I guess that they need the corn locally.

A couple of years ago, we did a *Wrap Up* called *Global Harvest* to look at who was food secure and who was not food secure. I said that it was going to be a big part of geopolitics.

Farrell: It is.

Fitts: One of the things that you notice is that the Anglo-American Alliance, which we talked about in **Economy & Financial Markets**, is a pure food juggernaut. It's amazing; it's Australia, New Zealand, Canada, and America.

What is interesting is that the U.K.'s self-sufficiency in food has fallen tremendously since they got into the EU. Now I expect it to start rising again. But what has been interesting over the last year is that as COVID-19 has happened, there have been thousands of different moves occurring to control the food supply and introduce synthetic, fake food, and play plague warfare over food. If you look at some of the things done to China, it's hard to imagine that those were Mother Nature.

Farrell: No, China is hurting. That whole flooding business I strongly suspect to this day that it was designed to cripple their food supply and their economy, and in the process, they have become more aggressive. Can you blame them? They have a billion-plus mouths to feed.

I'll tell you something else about the food and the centralization: I think that is one of the key geopolitical motivations for this anti-Russia campaign.

Fitts: Right, because they are doing non-GMO.

Farrell: They are doing non-GMO, but the other thing is that Russian agricultural production is way up. You can recall the Soviet error when they were constantly coming to us to buy wheat. There wasn't anything wrong with their agricultural production; it was that the system couldn't produce.

Now it's producing; they have a surplus. Now, they have an agricultural juggernaut in Russia that they have to worry about and have no control over. If you are trying to centralize the global food supply, you can't have Russia on the world markets.

Fitts: Especially Russia feeding China.

Farrell: Yes, and Russia producing non-GMO seeds. I'm fully expecting big grain deals between India and Russia because they had their GMO experiment, and it didn't turn out too well.

Fitts: Well, India stopped the Doha Development Round (WTO's attempt to reform international trading) because of 200,000 farmer suicides.

I keep 'banging this drum', and I'm not going to keep banging it again and again. If everybody had spent all the time they dedicated to the U.S. election and going to rallies and going to Washington and instead, spent that time building a local food system – whether it's a garden or joining a CSA or supporting your local coop—we would be much further along. This is a major danger. Are you going to have fresh food? Where is your food going to come from?

Farrell: And your water.

Fitts: My concern with a Democratic Senate and the ability to stop gun ownership is they will go after every ounce of real estate in this country, including the farmland. If you have farmland with water, they want it. That is why the realtors are getting that hate speech. They don't want them sharing

intelligence about what is really going on.

Farrell: You have to hand it to Mr. ‘Globaloney’; they plan thoroughly.

Fitts: I know, but it is beginning to feel like they live.

Farrell: It does.

Fitts: Story #20: Geophysical Risks: What Keeps Mr. Global Up at Night?

I just finished Ben Davidson’s book, *Weatherman’s Guide to the Sun*. This is the person who does SuspiciousObservers.org, and I’m still trying to figure out sunspots. If Ben is right and we are going into a period of low sun activity, traditionally there is a strong correlation between the economy and stock market and the sun.

If he is right, then the leadership is facing a major downturn in the economy and the stock market.

I don’t know if you know this story. There was a Russian man who figured out the correlation between sunspots and the stock market. Everybody laughed and laughed at him, and it turned out that he was ‘dead’ right.

Farrell: I wrote *Babylon’s Banksters* and I put all of that type of thing in there. I’m not surprised at all. There have been correlations of a very unusual nature between human activities, sunspot activity, market activity, radio communication efficiency, and so on, correlated to sunspots and, incidentally, to planetary positions.

Fitts: Really?

Farrell: Oh, yes, read *Babylon’s Banksters*; I put that RCA study in there.

Fitts: Oh, I remember.

Farrell: Then there is the Foundation for the Study of Cycles and all the

strange cycles that they have been documenting.

Fitts: I bought a new copy of all of the Asimov Foundation series. It's time to re-read that.

Farrell: What is Mr. 'Globaloney' afraid of in my book? When you said, "Geophysical," I said, "Follow my trip around Harvey's barn here. I've been saying for years that they are now dealing with their physics systems – things like HAARP (High-frequency Active Auroral Research Program) or EISCAT (European Incoherent Scatter Scientific Association), the ionospheric heaters, or CERN (European Council for Nuclear Research) and its gigantically humongous local magnetic fields and so on." I've been saying for years that these systems are so huge and gigantic in their potential (and I'm emphasizing the word 'potential') resonance effects on the planet.

One of the things they have been secretly studying are the operations and effects of those systems on the planet. I strongly suspect they realize they don't know all of the effects. They know there are effects, but they don't know exactly how they occur nor in what degree.

In other words, they may be suspecting there is a geophysical risk that these systems are causing changes that they cannot control.

Fitts: I definitely think that is a serious possibility.

I did a book review of the *Three-Body Problem*, which is the very famous Chinese science fiction book. It talks about a world where the core civilization gets wiped out every set period of time because they are interacting with planets on an unpredictable basis, and they can't predict what they need to do and when they need to do it. So, they periodically get wiped out.

If you go back in Earth's history and read Graham Hancock (British author known for his scientific theories), I'm wondering if that is not what is happening to us – that periodically we get wiped out.

If you look at how much money we have poured into the underground base network, they are trying to keep a core civilization going in the event of one of

those.

Farrell: I think they know something that we don't, but I also think that their knowledge is woefully incomplete and they know it. I am willing to entertain the idea that in creating these planet-sized systems like the ionospheric heaters and CERN and things like that, it's possible that they have unleashed a 'genie out of the bottle' unwittingly that they cannot control.

Fitts: So, they have done something permanent to the magnetic core?

Farrell: They have done something permanent to the geophysics of the planet – be it the magnetic core or whatever; I don't know. But they may have done something permanent. Maybe one of the reasons they are in this mad rush to lock everything down and scramble off the planet is that they know it, but I don't know.

Fitts: If you look at some of the nuclear testing that they did, it's quite frightening.

Farrell: It's very frightening.

Fitts: If you study what nuclear testing they did and what it may have done to the atmosphere; one possibility is that the nuclear testing basically destroyed our atmosphere long-run.

Farrell: Let's look at it a different way: It's possible, but I wrote the book, *Grid of the Gods*, and I began the book by talking about hydrogen bombs and the small differences in expected yield during the early period of the nuclear tests. I've always maintained that these bombs, when they are detonated, will have variable yields, even if they are detonating bombs of the same design with supposedly the same yield. They will have variable yields depending on when they are detonated and where on the surface of the planet they are detonated.

For a momentary instant, what they are doing is transducing energy from the local celestial mechanics of space-time. I think this is the hidden reason why recent additions to the nuclear club keep testing, because they've run across that phenomenon, and they want to understand the laws of how it works.

Well, if you acknowledge that hypothesis, and it's a wild speculation, then what you are saying is that these things are hyperdimensional energy transducers for a brief moment, and they will therefore, have some sort of effect in reverse on that hyperdimensional realm. It is going to affect, in very small ways, but if you add them up over time, it is going to affect that planetary signature itself.

Maybe they've run across this. I don't know.

Fitts: Given what they've been up to with nuclear testing, with CERN, with the heater, don't you find it interesting that they are blaming 'cow farts'?

Farrell: During a dialogue, my tech person, Daniel, asked me what I thought about climate change and so on. My response was, "Is the climate changing? Yes. Is it changing due to human activity? Yes. Has it anything to do with the production of carbon gases or 'cow farts'? No. What it has to do with, in my opinion, is precisely that they have achieved the ability to engineer physical systems on a planetary basis and they don't understand all of the laws that they are tinkering around with."

I go back to Admiral William Henry Blandy (US Navy during WW II) in the early 1950's when there was all of this public concern that the first hydrogen bomb test was going to ignite the hydrogen in the atmosphere. His response was, "I'm not a nuclear playboy. This is not going to ignite the hydrogen in the atmosphere and burn us all alive."

It's that kind of confidence or hubris that they know exactly all of the laws of what it is they are tinkering around with because they can do the thermonuclear chemistry. No. We saw that with Castle Bravo (first in a series of high-yield thermonuclear tests) – a designed yield of seven to eight megatons, and the thing went off into 15 megatons. Then we were told, "Well, we made a little booboo. We didn't think that lithium-7," which was part of the lithium deuteride in the fuel, "would actually enter the reaction."

I say, "Balderdash!" We know that Dr. Ronald Richter, the Nazi in Argentina, was using lithium-7 and said, "Yes, it's going to react." They knew that. So, they had to come up with a 'hair-brained' explanation because they found out that

the physics was much different than only the thermonuclear chemistry. That is my whole point here, and that is why I wrote all of that about Richter.

There is something else going on with these bombs, in my opinion. I'm not a scientist; I'm just telling you the way it appears to me.

Fitts: We recently made public our "Future Science" video, *Wave Genome* that Ulrike Grandigg did. In my words, not hers, she goes into the electromagnetic reality that comes along with many physical things, and she shows how the dynamics work totally different from what we've been taught.

Life is much more beautiful and complex. This is science by a material vision, not a complete vision.

One of the things that I have always wanted to ask you when we discuss this is: Have you ever read Doris Lessing's book, *The Making of the Representative for Planet 8*?

Farrell: It's amazing that you mention her because I have a friend who also mentioned the same series, but I have not read them.

Fitts: Every once in a while, I get this feeling. I read this many, many years ago because I had a professor who wanted me to read all of Doris Lessing, so I read many books. In the story, you have a small planet, which is under the governance of a separate civilization that has created the people on this planet. They are somewhat a meld of four different species. It was seeded and started by this other civilization.

The planet is dying. The governing civilization works with the leadership of the planet on how to manage the process and how to manage the population, and then save the people. It's a weird, unpleasant, uncomfortable book because everything is dying. The leadership is doing all of these strange things, and lying to people about what is really going on under the theory that they will be happier this way.

Occasionally, I get this creepy feeling, and say, "I feel like I'm in the middle of a Doris Lessing novel," thinking of this book. Sometime you might want to read

it. It's short; it's not a long book; it's part of a series that she did on this story.

Farrell: I did go onto Amazon to look at those books, and I've been thinking about buying them. I'm with you. We've discussed this many times before in these *Wrap Ups*. I'm getting the feeling that they know something that they are not telling us.

Fitts: Absolutely. I remember at the Secret Space Program in 2014, Richard Dolan was describing a General telling him, "Trust me, it's so weird you don't want to know."

Farrell: I do remember that, and I don't doubt it. But I get the feeling that whatever it is that they know, let's go with the Dolan comment, "It is so weird that they feel like they can't tell it," because no one might believe them.

Fitts: That's possible.

Farrell: I'll tell you why I think that: I believe that the weirdness is that for all of their materialism, their science has brought them 'chin to chin' with some unpleasant metaphysical realities. They have so created a culture that has bought into the materialism line that they would come out sounding ridiculous if they came out and said what they bumped into.

I think that we see signs of it, and we are seeing indicators of those scientists who have been delving into the so-called paranormal ideas over the years.

I'm a big octopus fan, as everybody knows. I love octopuses because they are such weird, intelligent creatures. They have nine brains!

Fitts: The '*Documentary of the Year*' is *My Octopus Teacher*. Have you seen it?

Farrell: I haven't seen that, but I'm reading Sy Montgomery's book.

Fitts: You have to see it. When somebody sent it to me, I said, "Why in the world would I want to spend an hour and a half watching an octopus?"

Then I said, “I promised that I would watch this,” so I started watching it. Five minutes in, I was hooked. I absolutely loved it. Octopus are fascinating creatures.

Farrell: We are dealing with an animal that clearly has some self-recognition and clearly has intelligence. It doesn’t live long enough to go very far with it, thankfully, because if they did, we might all be dinner for a kraken somewhere.

Just the idea of a sentient intelligent creature having nine brains and whose body is all upside down from normal is rather a breathtaking thing. You can tell by looking at them when they are looking at you that they are looking at you; they are aware.

I think that part of what we are running into is that we have grotesquely underestimated the forms in which consciousness can appear because, at some point in the last 500 years, we bought into this whole universe as a mechanism idea – which I’ve never bought into.

No, I’m not a pantheist; I don’t want a gang of ‘bible thumpers’ writing me and saying, “No, they’re just chemical machines.” I have a dog; I know better.

Fitts: One of my favorite videos of the year was Rupert Sheldrake giving a presentation, and he was essentially saying, “The mechanical model is out. How do we build a living model? What do we need to know? How do we do it?” It was very inspiring.

Farrell: I think the key there is quantum entanglement and non-locality.

Fitts: Yes, but that implies that we have to go to a very high level of transparency and integrity.

Farrell: I know.

Fitts: So, how do we escape from the secrecy?

Speaking of which, I didn’t bring this up before, but I don’t know whether or not you noticed that the new Attorney General is ‘Harvard, Harvard, Harvard’.

Farrell: I did notice that. This is going to be a FASAB 56 administration on steroids, and I don't even want to call it an 'administration'; I would prefer to call it a 'misadministration'.

Fitts: How about a 'gusher'. It won't be an administration; it will be a gusher. Don't you think?

Farrell: I do. They will 'turn on the spigot' and get everybody caught in the 'helicopter' money trap.

Fitts: Or cleared off their land and then the 'helicopter' money trap.

Next, we go to **Take Action, Inspiration, and Unanswered Questions**. We've laid out some of the important **Take Action's**. It comes down to culture and circulating money outside or decentralizing the monopoly on money. Part of that is the local food systems. If we are going to be food resilient, we will have to build local food systems. I believe the food is intimately involved with both culture and finance. That is where the divine culture and the finance can emerge from that.

TAKE ACTION

For **Take Action**, the big thing that we did this year was the *Take Action crowdfund*, and it has been very successful. We will double down on that next year. That is going to continue to be our action.

We are trying to support the litigators and the journalists who support the litigators because you have to win in both the court of popular opinion and the court.

I have to mention one thing: One of the groups we have tried to support significantly is the Children's Health Defense. We just went through a process where we saw a big hit on Kennedy using another member of his family. He sent in letters because there were so many factual errors in the article, and they refused to publish it.

So, we are now down to just pure outright lying. That's another reason you have to break free of reliance on the mainstream media.

Farrell: You have to break free of reliance on the 'propaganda' media in any form – *The New York Times*, CBS News. They don't call it "See B.S." for nothing!

Fitts: I continue to use the *Financial Press*, so I still get *Financial Times*, *Wall Street Journal*, and *The Economist* because to follow the financial markets, I have to have it. Otherwise, I do everything I can to stay away from the news, and it's gotten much worse. It's dreadful.

UNANSWERED QUESTIONS

The challenge with what you and I do is that the **Unanswered Questions** just keep growing.

Farrell: I see that!

Fitts: I think that we are going to take it quickly in terms of each one.

Question #1: How do we keep our minds free of mind control technologies?

Everybody is different, but I think there is a real relationship between your ability to use your time and resources to get what you want versus your mind getting influenced so that you use your time and money to help Mr. Global, which that is contradictory to your goals. QAnon op is the perfect example in, my opinion.

I leave it to each person to think about this. You and I could talk for a day about all the different things that you could do to protect yourself from mind control. The one thing that I would do is understand that I can't protect myself from something unless I can see it. I would recommend that they get *Microcosm and Medium*. I would recommend that they watch Truthstream Media's *Minds of Men*. Then we have a *Solari Report* on entrainment technology.

There is certainly more, but I think if you start there, if you can see that this technology is operating, then you can start to think, “Okay, how do I protect myself?”

Farrell: The other thing that I would urge is for people to understand that advertising is a form of mind manipulation. That is where most of this comes from anyway. To a certain extent, the whole materialism paradigm has been a mind control op. I think that is one of the most critical realizations people can come to that will help them get out of this conventional way of thinking.

The other thing that I would say is this: I’m not saying to turn off your TV or not to watch the ‘propatainment’ media, although I certainly don’t miss watching it myself, but realize that you are watching the American version of TASS (Russian News Agency), and that you are being fed propaganda.

Fitts: I gave away my TV in 1984 after hearing those billionaires talking about rolling out entrainment (although they didn’t call it ‘entrainment’), and it scared me to death. That was it for me and TV. I gave away my TV, and started to read books. I discovered that if you read about the long-term deeper trends night after night after night, after a certain period of time, your accumulated knowledge of what is actually going on ‘blows right by the noise’ that you hear every day.

Many of the stories that you are watching on the TV are the same thing over and over again; it’s a reality TV show. So why listen to noise, most of which is irrelevant, when you can get a handle on the deeper trends if you just invest the time?

Farrell: Invest the time and turn off the noise – quite literally; turn it off. It’s amazing how ‘clearing of the space’ it is to chuck the TV.

Fitts: The only time I see TV is when I’m in a hotel. I’ll spin the dials and see what’s up, and I find myself with my mouth open. I’m think, ‘What?’ It’s frightening!

Farrell: It is.

Fitts: Question #2: How important are invisible and secret weaponry and technology to the replacement of global currency systems with crypto control systems?

Farrell: I think they're front and center.

Fitts: One of the biggest challenges in my life is having a whole world of perfectly wonderful people who cannot fathom that weather control or other invisible technology is real.

Farrell: Tell me about it!

Fitts: One of my compliments of Trump is that he kept wanting to tell everybody about our invisible weapons.

It makes it so difficult to communicate with people who can't fathom that these weapons exist.

Farrell: I would wager that in most of those people's cases, they watch plenty of TV. They depend on that for their source of information rather than going out and doing a simple internet search for 'weather modification patents'. Trust me, you can do it, and you will be amazed at what comes up – even from Google, believe it or not.

Fitts: Dr. Skidmore did that search of weather control. He was proving it to himself, and he called me and said, "Do you realize that the Chinese had a public office for weather modification? And he said for the Olympics, 'It's no problem,' because they could just modify the weather."

Farrell: The state of South Dakota has a weather modification office. What do you think 'cloud seeding' is? It's 'nuts'!

Fitts: Question #3: How are invisible technologies being used to engineer civil wars, turn people against each other, and engage in disaster capitalism?

Farrell: I think extremely so, but people need to understand that when we are talking about ‘invisible technologies’, we are not necessarily talking about a nuts-and-bolts technology. The technology, in this case, can also be a process of mind manipulation, using certain words and not using other words, and so on. It’s learning how to spot them.

Fitts: I’ll never forget the day I proved to myself that the military was hiring psychic warriors to terrorize people with psychic and energetic methods.

Farrell: In fact, you can find certain people who were part of this country’s remote viewing program who will tell you that it morphed into precisely that sort of thing.

Fitts: Question #4: Where did Mr. Global invest the \$21 trillion (the missing money), the \$24+ trillion (the bailouts), and where is the new 2020 central bank and fiscal stimulus going? Cui bono Covid-19? How does this relate to the financing and reinvestment of the hedge funds and private equity firms?

Farrell: I’ll let you handle that last question about hedge funds and private equity. There is no doubt that much of that money is going into their own pocket. And there is no doubt that much of that money is going off planet.

Fitts: I think you are building a new governance system, and are moving the money out of the old system. You are leaving the liabilities behind. It’s like a booster rocket, and you are rejecting the booster rocket. So, you are moving that money to a new civilization and making very big bets underground and very big bets in space. The question that fascinates me about the offshore haven system, as we talked about in *Part I*, is: Where are they protecting all of this capital that they’ve shifted?

I think they have endowed a new civilization. They have robbed the bank and have endowed a new civilization. The question is: How can they make sure they keep the money and eject the booster rocket?

Farrell: Put the money up there.

Fitts: They approved Going Direct, and all of a sudden, the hedge funds and private equity firms are ‘off and running’. So, when COVID-19 slams millions of businesses, that is a real opportunity for the disaster capitalists. We know that the riots in the Opportunity Zones are also huge.

I think that vulture capitalism is out in space, and one of the things that you have to think about for 2021 is: My home, my county, my business – how is it going to be targeted by these folks?

You need to be prepared to ‘bob and weave and duck’. That’s why I think there is no more important issue than ‘who’s your sheriff’.

Farrell: That, and who is your mayor? I have one of these COVID narrative-believing RINO (Republican in Name Only) mayors here where I live. You have to listen to him. He’s from an old political family here, and he went to a private prep school and all of this. Just listening to him; the globalist clichés come ‘rolling off his tongue’ like he’s playing a tape recorder. He uses terms like, ‘sustainability’, and all the code words are there.

I’m think the city is at least a target zone.

Fitts: Question #5: What do you think the command structure for the ANTIFA/BLM armies and related covert operations look like? How does it relate to reinvestment in real estate and building out of the smart grids? How does it relate to Opportunity Zones? How does it relate to narcotics trafficking gangs and networks? How does it relate to military and intelligence capacity and corporate contractors and mercenaries?

Farrell: Do you want to know what I think the command structure is? Foundations.

Fitts: I would say that is the design, and those are the people who designed it.

Farrell: That is the command structure; the designers are the command structure.

Fitts: One of the funniest things that happened all year was when Trump

stood up and said that he wanted to send the military in to stop this. What we have are people crossing state lines to commit crimes. So, the Feds clearly have jurisdiction; the Department of Justice clearly has jurisdiction.

The Secretary of Defense looked like he was going to ‘you-know-what the you-know-what’. He was standing up saying, “No, no, no,” and you had all of these other establishment people saying, “No, no, no.”

I said, “You know something? DOD put out the contracts.” He’s behaving like a man who put out the contract, and the scope of work did not stipulate that you had to defend against a professional military.

That is not only going to change the scope of work, but they will demand ten times the price.

Farrell: The reason I say foundations is if you go back to the Reece Committee. Do you remember that one in the 1950’s? One of the things that the person who wrote the book on foundations and their power and influence was the chief counsel to the Reece Committee. He makes a very significant observation. He compares the corporate foundations to the Templars, which was essentially a foundation with an army attached to it.

What do we see happening now and what have we seen happen in the last 10-15 years? Well, some of these foundations—we could mention a certain individual from Hungary who morphed himself into being the bank for these private armies. I strongly suspect – and this is going to sound wild – that Mr. ‘Globaloney’ is going to start devouring himself.

In other words, what I’m suggesting is that you will see much more of these corporate foundations, including some well-known ones that are rather old, start doing the same thing as the man from Hungary. They are going to turn on each other. That is what I am suggesting.

Fitts: Remember when Harvard went dark? Harvard went dark before FASAB 56. That was a clear signal because they laid off a big portion of the endowment management and moved it all external and broke it up.

I think they do not want an internal staff to see what they are up to because there is going to be so much disaster capitalism. So, I think they were planning for this in 2017 when they went dark.

Farrell: Look at it another way: To make the disaster capitalism work, you have to have your private armies- you've been predicting that for a long time. I'm saying to look at a command structure for it, you will have to have the financial and the administrative and, quite frankly, the military operational expertise to do that. So how do you do that? How do you bring that kind of group of people together? Well, you bring them together in a foundation. This is what they are all about.

This is why I think these are part of the command structure, and I would go on to say, not only the command structure, but the operational planning and administrative structure for those types of operations.

Fitts: We see who the appointed AG (Merrick Garland) is, and he is Harvard Corporation and Harvard management all down the line. So, Harvard's man is coming into whatever you are going to do with the Green New Deal and the SDRs and the universal basic income and the Going Direct plan and hooking everybody up to the JEDI cloud. This is all coming together in the government. Now you have the Harvard Corporation person running the machine. The Department of Justice is the control machine right in the middle.

Farrell: They are setting up America for a 'Rape of Russia' scenario.

Fitts: Yes, but a very sophisticated one.

You have Janet Yellen in Treasury. She is the 'mom' air cover for the vulture capitalists. She has done this before.

Who goes in at OMB, and who goes in at HUD? Remember that many of the neighborhoods that you are going to rape have a large amount of HUD money in them. So, that is what I want to watch. I think you're right; we are coming into a very sophisticated version of the 'Rape of Russia'.

Farrell: I think that one of the reasons they so overreacted with Trump was

that their problem is Vladimir Putin. They don't want a Vladimir Putin stepping on the stage and putting a stop to it – which could happen.

Fitts: It could happen, and I'll tell you why it could happen: If you look at the kind of people who are breaking free (the pandemic heroes), I've never been in a room with any of the pandemic heroes when a relatively brief description of what is happening economically occurs. They are so smart. These are smart doctors and smart lawyers and smart scientists, and the speed at which they can connect the dots once you explain it to them, is astounding. They have it, and they will run with it.

You're talking about the people who are breaking free have an extraordinary ability to deal with complexity. These are amazing people, and they can operate in high-trust because they are willing to be completely open and share.

Farrell: It could go in a very interesting direction. The reason I say that is you mentioned Isaac Asimov's *Foundation Series* earlier. Well, what happens in the *Foundation Series*? The character of the mule.

Interestingly enough, the character, the mule, is able to gather the power that he is able to gather. Why? Because he is a mutant, and he has all these psychic abilities to understand what his opponents are thinking and what they are about to do. So, he is always one step ahead, and he is a statistical fluke who is an outlier to the whole system that the galactic empire has put together.

Their plan was stopped by a mule in Russia, so to speak, and the same thing could happen here. That is one of those things that I think Mr. 'Globaloney' fears because they know that it can happen.

Fitts: You are also dealing with the spiral down. The more that people do not trust the leadership in the establishment and the more that this conflict between the benefits of financial leverage from the rule of law versus the benefits of organized crime, the more the organized crime is seen clearly.

I think this game that they've been playing in the Opportunity Zones could cause a spiral down.

Farrell: Inevitably, people are going to start connecting those dots.

Fitts: They are now.

Question #6: How important is FASAB 56 to what is happening? How important is the increased secrecy of major investors? How does this relate to the recent updates on the Missing Money?

Farrell: Oh, I think it's front and center.

Fitts: I do, too.

Farrell: It is absolutely at the core of it. They had to take the whole thing black for one reason only. If there is no other reason, then this is the reason: That hidden system had become so huge and so complex that it was beginning to bleed over.

If a non-finance person like me can look at all of this and say, "There is a hidden system of finance," then it is becoming obvious that their game of keeping it hidden is over. So now, we are going to officially make it secret. I think it absolutely is front and center, and it affects everything.

Fitts: Question #7: Why is there a great poisoning underway? Why is there an ongoing global program to increase the levels of aluminum, other heavy metals, and nanoparticles or nanotechnology in humans? Is the push for Neuralink because humans will be more intelligent accessing AI, easier to control, and integrate with robots, or because the elites want and need access to uniquely human intelligence and consciousness?

Farrell: I think the key is the last part of your question: The elites want and need access to uniquely human intelligence and consciousness. I think that fundamentally, you are dealing with people who are narcissistic psychopaths, and the thing that the narcissist lacks – and I think in some cases, they know they lack – is genuine human feeling and empathy. So, they mimic it. They are experts at mimicking it, but they can't experience it. Because they can't experience it, there is always an aspect of those who they are trying to control

that is opaque to them.

I think that the last part is probably the key to the question here.

Fitts: The thing I keep thinking: During Katrina, there was a *New York Post* article about Condoleezza Rice shopping at Ferragamo's in New York right in the middle of the worst moment when the most people were dying. So, the National Security Advisor was completely oblivious to what was going on with people dying at Katrina, and she was shopping for \$500 shoes in New York.

The beauty of that story is it signifies that she didn't realize that would be a PR problem.

Farrell: It's the same thing with Nancy Pelosi getting her hair done without a mask.

Fitts: Or standing in front of her Sub-Zero refrigerator showing you her gourmet ice cream.

Farrell: These people were either born narcissists or something happened to them with the entrainment technology and so on, and DC made them that way. But I think that is part of it.

The other part of it is aluminum, particularly in all of this chem-spraying they are doing, and in some of these injections. That is the real mystery. Aluminum does have neurophysiological consequences; it is directly tied to Alzheimer's.

Fitts: Christopher Exley published a new book that I am trying to get on aluminum. I can't wait to read it.

Farrell: I had a friend in Sioux Falls when I was growing up, and she always cooked in aluminum pans.

Fitts: Why?

Farrell: At the time, this was not known about aluminum; I was a young child at the time. My mom always cooked in iron skillets and that type of kitchenware.

I cook in iron skillets. But she always cooked in aluminum pots and pans.

When the first news came out about the connection between aluminum and Alzheimer's –in the 1970's or 1980's – I immediately thought of that family. I went online a few years ago to catch up on where they were and what they were doing, and that whole family consisted of a mother and father and five children. The father ended up in a nursing home with Alzheimer's. I thought, "There it is."

I think they are doing the aluminum to quite literally 'tinker' with people's memory – going back to memory and the importance of it – and to 'tinker' with people's identity.

Fitts: Question #8: High-tech risks: Should we beware of high-tech fires, the push for immortality, DNA editing, 5G and mind control and assassinations, and the interbreeding of humans with other species? What should we do to learn more about Weather Warfare, Interdimensionality and Time Travel, and Geophysical Risks?

If you look at the risk issues from new technology, they are exploding. But one that fascinates me is you have all these billionaires running around saying, "I'm going to live until I'm 145." All I keep thinking is, "What could possibly go wrong?"

Farrell: I wrote about the longevity quest in my first book when I started this whole weird, alternative book-writing career in *Giza Death Star*. I've said this many times before: Your quality of life is not dependent on your longevity. All that longevity means that whatever character or virtue or vice you have decided to practice in your life only gives you much longer to perfect yourself. What scares me is that the people who have access to that technology are people who are, quite frankly, loathsome.

I tell people all the time, "Imagine a Joseph Stalin or an Adolf Hitler living 150 years."

Fitts: It's like the time the wonderful chairman at Sallie Mae asked me to join the Council on Foreign Relations. I said, "You know, I just don't want to do

this.”

He wanted me to get Nick Brady to sponsor me, and I wasn't going to ask Nick for anything. So I said, “I just don't want to do this, Harry.”

He looked at me, and was shocked. He said, “But if you don't do this, you'll be out forever.”

That's when I imaged them taking my name off the locker in the underground base. I realized, “If I do this, I'm going to lose my place in the underground bunker.” Then I thought, “I'd rather take my chances with the hoi polloi.”

There is this wonderful quote from Orwell that CJ Hopkins uses in one of his books. He says, “If there is hope, it must lie in the proles.”

I wouldn't want to live for 145 years with that group.

Farrell: I wouldn't either. The upside of it is: Imagine a Mother Theresa or a Francis of Assisi living 150 years.

Fitts: That would be quite amazing.

Farrell: It depends on what your character is. I think there is enormous risk in this push for immortality and other things. As for the interbreeding of humans with other species, part of me thinks this whole COVID op might, in part, be designed to flush out some of those people. I don't know.

Fitts: What is frightening is: I've been trying to look at and understand the entire bio-warfare weapon labs all around the world. We've put enormous amounts of money into creating many weapons. It's quite scary.

This next question goes to all the different potential war possibilities. Part of this is that with the U.S. no longer playing global cop, the possibilities for local wars skyrocket.

Question #9: Will India start a war with Pakistan? Will China invade Taiwan? Are Russia and China deciding to do a first strike with the

United States?

Farrell: I don't know. I think this is part of the geopolitical fallout of the last election, which I think is going to be dire. I do think, yes, the temptation is there for them to say, "Let's be done with that whole failure," but the consequences of their doing that is everybody would have to be on board with that, and I don't think that will happen.

If you are Russia sitting on the sidelines and China comes to you and says, "Oh, we are going to launch a first strike against America," you will not want to see the Chinese take over all the assets and resources of this country and monopolize them. So, I don't think it will be that. I think that it is far more likely you will see – as you've indicated in the question – that more local conflicts between India and Pakistan or China and Taiwan.

In the case of Taiwan, the real danger to China is they are calculating on America intervening. I think they drastically underestimate the possibilities for interventions by somebody else.

Joe 'Bribe' could lose an entire fleet and not notice. Japan, on the other hand, is in their backyard.

Fitts: I think Japan has a vested interest in not letting the Chinese invade Taiwan.

Farrell: I do, too. If they do that, it sets off that whole region, and China would be tangling with many people who they have drastically underestimated before.

Fitts: Question #10: How will the U.S. government and central bank be reengineered after FASAB 56, the 2020 ops and elections, and after the JEDI contract is in place? Is the Plunge Protection Team being reengineered or privatized? How critical are the use of major clouds for economic warfare to the takeover of business and market share by private equity firms?

Farrell: With FASAB 56 in the midst, they can reengineer the government

and central bank any way they wish and keep it all secret. That is what I think they will do.

Fitts: Here is what is interesting: If they have all three clouds – the JEDI cloud, the Amazon CIA cloud, and the Leidos Navy cloud – they basically, in combination with everything going on at Treasury and the US government, can use all of those clouds to reengineer all of the Federal cash flows. Imagine them canceling every program and cash flow and every check that every American gets, and they say, “Everybody gets a universal basic income of \$2,000, and all these other things go away.”

Farrell: The way I look at what you saw with the election is directly connected to FASAB 56. What they just told you is all of this you are seeing is for show.

We have a senile dotard as President, and whatever she is as the Vice- President. They are nothing but placeholders. They are ‘sock puppets’, and you can see that from Biden’s pick for his cabinet. He’s not making those picks himself; he is being told.

Fitts: It looks as though the Council on Foreign Relations and that group are making these picks.

Farrell: Absolutely. I think they reengineer it any way they want. They will keep the front show going. They will keep the Schumers and the McConnells employed to make it look like there is a functioning government responsible to the public, but that is not going to be it.

Fitts: They are choosing candidates who are quiet. In other words, Yellen is ‘mom’ and the AG is not interesting in the way that Wilbur Ross (former Secretary of Commerce) is interesting. So, they are picking very quiet technocrats.

Question #11: What will happen to U.S. land and real estate as a result of changes underway? What about the existing energy model? Will energy delivered by wireless technology at low cost be implemented soon?

Farrell: I think that land and real estate will be gobbled up wherever they can get away with it.

Fitts: That is what I think, also If they can bring down the energy costs dramatically, it is going to put more pressure on to buy up all the land and real estate.

Question #12: Who is Mr. Global, what is the governance structure on Planet Earth, and what are the risk issues that are driving Mr. Global's actions?

We just discussed this in *Part II* in **Story #20**, but I continue to think it is remarkable that we live on a planet where we don't really understand the governance structure at the top, and we tolerate that. I think that this needs transparency.

Farrell: Well, we do understand the governance structure, to a certain extent. It's a criminal enterprise with several factions at the table.

Fitts: Right, and there appears to be a dividend going off-planet – or someplace.

Farrell: My guess is off-planet, and the real governance structure is there, be it in a spiritual form or an actual connection to some species out there. That is my suspicion.

Fitts: Last year, I was in Milan to see, among other things, the da Vinci exhibits. I saw *The Last Supper* for the first time in person, and it's a remarkable experience, including the fact that the monks who built a door to the kitchen cut out Jesus' legs from under him. The metaphor of that is just 'mind-boggling'.

In the painting, you see three windows in the back open. Along each side, you see four windows that are shut. As I was listening to Ulrike doing a wonderful 'Future Science' on hyperdimensions, she talked about the eleven dimensions. I thought, "Did da Vinci draw that with basically eight dimensions shut and three open?"

Farrell: It is very possible.

That may sound like a strange thing to say, but you have to remember that da Vinci was involved with some of those Renaissance secret societies. I've always been convinced there is some actual science that comes down from high antiquity – from a very high civilization – that those societies preserved and knew what they were preserving. So, I wouldn't be a bit surprised.

Fitts: Question #13: Which is stranger – what is going on behind the veil of secrecy, or the overwhelming effort to pretend it is not going on and to create an official reality diverging steadily from reality?

Farrell: In my opinion, I think it's the latter – it's the overwhelming effort to pretend that it's not going on and to create this madcap quasi-reality.

Fitts: Right, planet cult.

Farrell: I think that is far stranger. In a certain sense, all of that is the massive distraction to keep us preoccupied from wondering what is behind the curtain. *The Wizard of Oz* is such a marvelous metaphor for this whole thing.

Fitts: Here's the thing: With this level of secrecy and weirdness, no sovereign bond market can survive.

Question #14: Given the tsunami of occult and demonic practices and symbols, should we be concerned about the interaction between AI and interdimensional intelligence?

Farrell: Yes, I think so.

Fitts: I think that you are building a digital system that will allow interdimensional intelligence to control through the digital systems, and now you are going to turn over your money system to that same interdimensional intelligence. It's 'nuts'.

Farrell: It is totally 'nuts', and this is going to sound even 'nuttier'. You and I

have talked about this, and it appears to us that a certain segment of Mr. 'Globaloney' is panicked about something. They are in a hurry, and they are panicked.

One of the scenarios that I have been entertaining is this: If we admit the possibility that all of this craziness that we are seeing is because they have already brought in an AI that is telling them what to do, I think that perhaps some of them have woken up and realized that what they are in traffic with is not on their side. That may be one of the reasons for the panic that we are seeing.

Fitts: Here is what is interesting: They are trying to keep the dollar system going while they are accelerating in the new system. So, they are trying to speed up the new and keep the old one going. The question is: Is there something about what they AI is up to that makes it dangerous to be between the two systems?

Farrell: That could be, too.

Fitts: Question #15: Who is burning the churches of France and why? Why is there an attack on Christianity in many parts of the world? Should we be concerned that the depopulation efforts are focused on Christians? Does this explain the real targeting of US African-American communities?

Farrell: Oh, I do believe that it explains the targeting. And, yes, I do think that part of the depopulation effort is focused on Christians. I would also say that part of it is focused on Muslims.

Fitts: Yes, and I think part of that is the interest charged in usury questions. The Western banking model is so destroying the United States but can't destroy the Muslim world without allowing interest.

Farrell: This will sound very strange. Years ago, I bought a book that was called *Fourth Reich of the Rich* by a fellow who was connected to all of this Aryan Brotherhood and so on. Nonetheless, the book is chockfull of very bizarre information. One of the things that he alleges in the book is that there

used to be a copy of a letter in the British Museum that was written by Albert Pike to Giuseppe Mazzini – two very high-ranking Freemasons. In the alleged letter, Albert Pike outlines the Masonic plan for three world wars: The First World War to get rid of the old empires and the old dynasties in Europe, which in the case of Russia, Germany, and Austria, they were successful at. The Second World War was to demoralize people and get them away from God. The Third World War would be to destroy Christianity and Islam.

Fitts: One of the things that I see in certain areas of Europe is this unbelievable and very powerful commitment to Mary. It's a very divine, feminine, sacred commitment that creates beautiful fields, and it is very strong. For some reason, it really 'pisses' them off. I haven't figured it out yet.

Farrell: Well, you can't have incarnation without Mary. That's the way it works.

Fitts: Touché. If you are going to do test tubes, then you need to get rid of Mary.

Farrell: Right, you have to get her out of here real fast.

Fitts: Question #16: Is moving education using COVID-19 online a step to privatization and a corporate takeover of education?

Farrell: Yes, I think so. It's the final clampdown on so-called 'education'.

Fitts: They want to corporatize it. It's a giant sucking sound of every cash flow into the stock market. I would love to see a market research analysis of how much money shutting down the churches has moved out of churches and into Netflix. The church tithes are a huge cash flow, and they are moving it over to corporate; they are moving it to Netflix and Zoom.

Question #17: What is Mr. Global going to do next with the COVID-19 pandemic? There appears to be a 100-year cycle of plagues and plague laws used to centralize capital. Is it tied to currency cycles?

Farrell: I don't know if it is tied to currency cycles or not, but I wouldn't be a

bit surprised.

Fitts: My intuition tells me that there is definitely a historical relationship since the Bubonic Plague between plague laws and currencies. I'm going to grossly oversimplify: Every 100 years, you have a plague, and then you move the currency. Portugal to Spain, Spain to the Dutch, the Dutch to France, France to Britain, Britain to the U.S., and now we are on the next one.

Question #18: Why are the Australian and New Zealand lockdowns so brutal? What does it have to do with Pine Gap and Antarctica?

Farrell: That's 'out of left field' and is a doozy!

Let's put it this way: I wouldn't be a bit surprised that those things are factors in this because this whole lockdown has always struck me as, "What don't they want us to see?"

Fitts: Remember that the worst lockdown was in Victoria, Australia. That's on the Southern side, closest to Antarctica.

Farrell: I don't find it at all circumstantial that Mr. Kerry is connected with the Joe 'Bribe' Administration. He made that very, very bizarre trip to Antarctica right in the middle of one of the most hotly-contested elections in American history in 2016.

In my opinion, the story that we were given was absolute 'B.S.' They said, "Oh, he has a personal interest in climate change, so he is going there to find out more."

'For crying out loud', he is the Secretary of State! He can have pallets of information wheeled into his office about climate change. That was about something else, and I think it was part of his diplomatic mission to conduct diplomacy there with somebody. I think there has to be some connection with all of the strangeness that we've been seeing over the years in Antarctica. So, there could be a connection here with these lockdowns. I don't know.

Incidentally, they had their first COVID case in Antarctica. Now tell me how

that happened.

Fitts: If the genie came out of the bottle and said, “You can have any knowledge you want,” there is no doubt that two things on the list would be: What really happened in Wuhan with Bill Gates and Charles Lieber and Fauci? I think they were doing a prototype that went wrong. The other thing that I would want to know is what the ‘heck’ is happening in Antarctica.

Farrell: Absolutely! That is one of the most fascinating questions. I want to know what ‘bee got into Hermann Göring’s bonnet’ to send a scientific expedition off to Antarctica as the war clouds in Europe were gathering. What in the ‘name of sense’ did Buzz Aldrin mean when he tweeted out, “I’m off to the launch pad now,” and then he got sick down there and allegedly tweeted that what he saw there was just absolutely evil. What in the ‘name of sense’ is going on down there? I want to know.

Fitts: It’s definitely something.

Farrell: And it’s definitely not normal.

Fitts: Question #19: When are robotics and automation going to go up the S curve? Will the ‘Defund the Police’ movement turn out to be an ‘install robot and drone’ police wave?

Farrell: The more you have concentrated on that, the more I’ve been looking at stories of robots, and they are chilling with what they are now capable of doing.

There is a video out right now of a police robot that has been developed in Boston that is circulating around. I think it is absolutely chilling.

Fitts: I never checked to see if Boston Dynamics is owned by Harvard Corporation, but it wouldn’t surprise me. Imagine how much money Harvard Corporation could make installing Harvard-owned robots in every municipality in the country.

Farrell: I’ll go even further: I think that this is about much more than law

enforcement. I think you can expect to see robot judges, robot courts, and robot banks.

Fitts: We are putting the interdimensional in control of everything through the AI.

I had a wonderful subscriber from L.A. write me recently and say, “They are defunding the L.A.P.D. This is no longer going to be a police matter; we’ll have social workers do it.”

She said, “My understanding from the local police is that to date four social workers have been killed going out on calls that normally would have been handled by police.”

Farrell: I can believe it. I watched a video of an L.A. animal rescue organization called Hope for Paws, and they received a call about a little injured dog who had somehow got into the center island on a busy freeway. She was lying there injured, not moving.

They sent out the team to rescue the dog, and the person who runs the rescue called the L.A. police, who showed up be a police escort and close off the lanes of the freeway so that he could rescue the dog.

As I was watching this, I was thinking, “What robot would do that?” Not one. It’s not part of their programming to show that kind of compassion. It took two human officers to do that and to respond to his call.

I thought, “That is more evidence that this system that Mr. ‘Globaloney’ is trying to bring into place is so very anti-life.”

Fitts: The occult’s energy gets clearer and clearer.

Question #20. Can the ‘COVID-19 to Climate Change’ Bait and Switch really work? And why has Biden appointed a climate change czar who has the carbon footprint of a Panzer division?

Kerry used to have an oceanfront property, but they may have sold it. Now

Obama and Michelle have two oceanfront properties.

Farrell: Can it work? No, I don't think so.

Fitts: They keep trying to do it.

Farrell: I know, but the problem with the climate change op is that it is one thing that very early on, the alternative media has hammered to 'death'. You would have to be colossally stupid to buy into the 'cow fart' explanation. There are people who are that colossally stupid, but I don't think that most of them inhabit the alternative research field. It has grown too big for them to stop that, so I don't think that it will work.

Fitts: Question #21: What is happening to the Sun? Are we entering into a period of diminished sun spot activity? What would that mean for our weather and economy? Are we at risk of a new ice age? Why is Gates talking about blotting out the sun? Is the risk of a CME real?

This thing about Gates blotting out the sun is so funny because we've been spraying since the mid 1990's – that I know of. We've been doing it for 25 years, and now they're saying, "We have this new idea. We might blot out the sun."

Farrell: I think that is just a typical way that they come out and say, "We need to consider this idea," when they've already been doing it. This is their playbook. It makes Bill Gates look colossally stupid – like we don't realize that they are trying to do some of this – but the reality is that I think the spraying is just exactly like Elana Freeland has pointed out in her books.

They will give us the 'environmental concern' as the cover story, but what they are really trying to do is increase the electrical conductivity of the atmosphere for various purposes – none of them good. So that is what I think.

As far as the sunspot activity, periodically in history we have entered these periods of solar minimums where there have been mini ice ages. So that may be a possibility.

Fitts: I think it is a possibility.

Question #22: Does the Earth have a *Three-Body Problem*? Why are there patterns of civilization destruction 10,000 years ago?

Farrell: Explain the *Three-Body Problem*. I have not read that novel, so I don't know what he is calling the '**Three-Body**' Problem. I know what it is in terms of mathematics.

Fitts: Let me read this to you: I just did a book review of this, "In physics and classical mechanics, the three-body problem is the problem of taking the initial positions and velocities of three-point masses and solving for their subsequent motion. The three-body problem is a special case of the n-body problem. Unlike two-body problems, no general closed-form solution exists."

In other words, you can't predict the behavior of the celestial bodies around you, and occasionally you get clobbered.

Farrell: Do we have a three-body problem? Judging from the number of stories in the last few months about close fly-bys of asteroids, I would say that the answer is yes.

'**Why are there patterns of civilization destruction 10,000 years ago?**' I think the answer is simple. I am not a catastrophist, but I think that you are looking at war, particularly in the case of my cosmic war scenario. It's been going on for much, much longer than that.

Fitts: I agree. What was the name of the man on the panel at the Secret Space Program 2015? He said, "Mars is what happens when you have a nuclear war."

Farrell: That was Dr. John Brandenburg.

Let's put it this way: Every ancient record of that cosmic war, in my opinion, indicates that we have cousins out there. They look like us, walk like us, talk like us, and so on. They may be much larger physically, according to some of those accounts. In essence, we are dealing with a humanoid species that may even be genetically related to us if you believe in some of the old accounts.

Fitts: I want to bring this up and I've said this many times. Periodically, I try to figure out who owns the debt, and I can't. I can figure out who issues the debt, but I can't figure out who owns it. It could be this hidden system of finance, but it could also be off-planet.

Farrell: Let's look at it this way: Why would you need a hidden system of finance? If there is off-planet ownership, you would need it because that means that you have legal agents for that off-planet entity here on Earth acting as cover for it. So, the hidden system of finance may actually be a system to cloak that alien presence from financial scrutiny. That may be one of the most obvious ways that it is there.

Fitts: Right, and that is one of the reasons, if you could get away with a FASAB 56, it solves a multitude of problems because there you can produce your secret dividend no matter what, and it's easier to do.

I had a subscriber ask me why I was an optimist, and it took me forever to answer. I finally decided that I would do an entire show on it. I did a complete *Solari Report* explaining for an hour why I'm an optimist. So the next question is:

Question #23: What are the supporting facts and arguments for optimism?

Farrell: From my point of view, the supporting facts and arguments are that the system that we are seeing trying to be put in place is unworkable. It's an inhuman system. Basically, if you plan to govern humans in this fashion and not kill them all, then you are putting into place a system that simply is not going to work.

It may be a long, rough, bumpy road getting to that point where everybody wakes up and realizes that this is not working.

Personally, my other reason for optimism is that every time humanity seems to have tried one of these experiments, we have, what I call, a "Tower of Babel" moment. You get an intervention that puts a stop to it.

Fitts: Tim Keller is a wonderful pastor. He quotes Proverbs and says, “God built wisdom into the fabric of the universe.”

Farrell: I say the same thing every time that we get into cosmological questions in my vidchats. I think that there is an inbuilt cosmological rule of karma, if you will.

Fitts: And intelligence.

Farrell: And intelligence that puts a flat end to it. I go back to the pigeons at the 5G tower. I think that was breathtaking and highly significant, and people don’t get what the significance was. These birds were attacking something that was giving them headaches or whatever discomfort it was causing them.

Fitts: That is what everybody says, “I’m getting headaches.” That is the number one complaint.

Question #24: What is most on the minds of members of Giza Death Star and the Solari Report subscribers? What can we do this year to help improve the learning speeds in our shared intelligence networks?

Farrell: From my website, the overwhelming things that I think are on everyone’s minds are: What do we do? How do we negotiate our way through this? How do we survive? I mean that literally because I’m getting the impression from some people they realize that their lives are now on the line.

That is what is the most on their minds. I don’t know about your site.

Fitts: It’s the same. What we are trying to do is figure out how we can help each other to so improve our intelligence that we ‘jump the curve’ on the situation. In *Battlestar Galactica*, they keep having to do a hyperjump. I think we will have to keep jumping the curve and jumping the curve.

There is a way through this, and the way through this requires that we constantly invent a model that will work, and we use our time and resources to make money building that model. We have to build towards the thing that can work.

Farrell: There is another aspect of this, and I apologize to those listeners or readers who are not spiritually or religiously inclined, but for those of us who are, I would say that it is absolutely necessary to ask for divine protection and guidance and courage in very specific ways. “Protect us from evil,” is what we should do.

As I said before, “Lex orandi lex est credendi,” or, “Law of prayer is law of belief.” That is from St. Vincent of Lerins in the 5th Century, for those of you who want to know.

What I mean by that is: Don’t just dash off the quickie sound bite prayer. Those are effective, but it’s much more important to look at the list. I’m thinking of the breastplate of St. Patrick. Look at the list of evils you are confronted with in your day, and pray specifically to those things. Then make your general petition and anything else. What that does is it at least focuses your intention.

So, number one, this is for protection, and number two, it’s for guidance. This is a conundrum and a situation that none of us individually or even collectively have the wisdom or competence to negotiate through.

Fitts: It’s worse than that because nobody knows how to do this. Nobody is an expert at doing this; nobody has been through it before. But that is not the way to think of this. The way to think of this is: What are we going to invent?

It’s not just inventing a way to deal with the situation, but it is a way of inventing that which will transcend this to an advanced human civilization.

This is like Judah (Iron Age kingdom of Southern Levant): We take what is coming at us, and we use it to invent a human civilization. I don’t want to ‘survive’; I want to invent a human civilization.

Farrell: Precisely. What you are saying is: We can’t sit here and hand out a master plan to everybody. We can’t even develop a master plan for ourselves. We can take certain actions as the situation requires, and we can respond with invention as situations arise. So, there is no master plan here. We have to be perceptive enough to recognize evils and to try to protect ourselves as much as

we can, and move forward with that invention.

Fitts: Someone asked someone about the statue of David, “How did you do that?” and he said, “I just chipped away everything that wasn’t David.”

So, we have to know what must and should not be and chip away. That’s what I do: I just keep chipping away.

I do want to underscore what you said: All of the intelligence and guidance we need is available if we will ask for it. But be careful. One of my favorite preachers said, “Never ask for patience because God will send you lots of situations that will teach you patience.”

Every week we have a hero, and then every year we pick a *Hero of the Year*. One thing that I will say, if you go back and look at our heroes this year, is “Wow!” I get the same feeling that I got when I saw Tina Turner in concert in her last concert tour. I turned to my friend, Georgie, and said, “What’s our excuse?”

The first one was that wonderful Israel Shahak. You gave me that book for Christmas, which I just loved. What an amazing man he was!

Farrell: That is a very good book.

Fitts: The review is on *The Solari Report*. I can’t thank you enough for that book.

The *Hero of the Year* are Russ and Pam Martens who are the authors of *Wall Street on Parade*. They are the ones who completely detailed and outed the design and approval of the Going Direct Reset at Jackson Hole. You can read all about them, both at *Solari.com*, and on the web presentation.

They just decided that they were going to bust the Wall Street/Washington corruption. Their tagline is, “A Citizen’s Guide to Wall Street.”

They don’t do interviews, they don’t do public events, but they research and ‘out’ these people again and again every day. It’s all free, and it’s all available at

their website. It's an amazing, amazing job.

Part of the inspiration was 'Heroes'. We've put some other things here as suggestions for some of the things that inspired us. The Rupert Sheldrake video really inspired me. Thomas Meyer and I were both very inspired by the comets and the conjunctions.

So, it is all there on the website. Do you have any thoughts, Joseph, about what inspired you in 2020 and what will inspire you in 2021?

Farrell: That's a hard one.

Fitts: What about Shiloh?

Farrell: Yes, she is my faithful little friend. Now she wants to give me dog kisses.

Fitts: Dog kisses are such a great thing for 2021.

We've done *Part I* and *Part II*. We have gone through **Unanswered Questions, Take Action, and Inspiration**. What other thoughts about 2021 and what we've learned in 2020 do you want to mention?

I want to point out that if you are a *Solari Report* or Giza Death Star subscriber and haven't read *The State of Our Currencies*, I strongly recommend you do so – even if you only skim it. I'll never forget when COVID-19 happened, I had one wonderful subscriber who said, "Oh, it's going to be over in three weeks."

I said, "Read *The State of Our Currencies*."

He wrote me back and said, "Oh, I guess this is going to take a couple of years." It was rather amusing.

I think that at the heart of this is the resetting of the financial system. You have to understand that or else nothing makes sense.

Farrell: And it is going to be a bumpy year.

Fitts: It is going to be a bumpy year! So, what about you and Giza Death Star? Tell us about your year.

Farrell: We are in the middle of some major changes on the website. People who are our regulars there will have already noticed them. I'm adding a new vidchat to the vidchat series that will be shorter for people who want short and quick rather than long and detailed.

We are also changing the way that we are doing some of the questions themselves so that people can actually see the questions rather than only have me read them. So, that is going on.

I'm hoping to do a couple of new webinars this year. The problem with the webinars is that they are almost as much work as writing a book.

Fitts: Oh, I know!

Farrell: I know you know.

Fitts: I want to remind you that I am told again and again and again that what is needed is a curriculum.

Farrell: I'm hard-pressed for the time to put something like that together, nor would I have the competency in all subjects to do that. But I can certainly recommend things in philosophy and theology and perhaps some history. Things like biology and physics or topics like that would be way beyond my pale.

I think that people can, more or less, do it for themselves by looking at good material and good books in any of those fields. They can look at the bibliographies and begin to pick up the primary and, what I call, the principle secondary sources are to look at or have access to. Again, look at bibliographies. Once you get sufficiently in-depth in any field, they will tell you what the benchmark books are.

Fitts: When I read *Invisible Rainbow*, I had a hard copy, but, because I was

traveling, I got the Kindle copy so that I could read it on the plane. I was halfway through the book, and kept thinking, “This book must be really long.” Then I realized that the second half was all footnotes. I said, “You know something? Joseph will like this book.”

Farrell: And I do. It’s not only well-written and a very easy read, but it is well-documented.

Fitts: It is unbelievably well-documented.

Farrell: If it doesn’t have a footnote, it’s not worth reading.

They are going to put on my epitaph, “He lived for footnotes.”

Fitts: I want to mention that we talked about FASAB 56 and the missing money, so we took all of our documentation on that, put it into volumes, and shipped it out. We wanted hard copies worldwide so that it wouldn’t get suppressed because the purge is on.

Farrell: The purge is on. And if you don’t have a hard copy of things that you like to read, now is the time to get them. I go back to what I’ve always said, “The only canonical form of anything that I’ve written or, for that matter, anybody else has written, is the hard copy.” They can ‘tinker’ with anything with their computers.

Fitts: I would, if you can financially afford it, make a list of every book you might ever want, and buy it. If you want it for your children or your grandchildren, buy it; buy it now, and buy it soon.

Farrell: I’ve been buying music scores ‘like crazy’ because they are going to go after that; I’m quite convinced they will.

These people are to the point where, I think it was Glenn Beck or maybe it was you, said, “We are going to restore and update the *Mona Lisa*.”

Fitts: I hadn’t heard that one!

Farrell: He went into this long description, saying, “We don’t like her smile. It’s not really much of a smile, is it?”

You’ve seen my ‘pie-eyed’ Mona Lisa where she has this silly grin, and her eyes are different, and that is what they are going to come up with. Imagine them going in and updating all of those paintings in the Louvre or the Prado.

These people are not above that because they have no culture; they’ve had to buy their culture – what little they have – and have no appreciation for it. And they think they are ‘improving’ things. I’m sorry, you’re not improving things.

Fitts: Two years ago, we celebrated da Vinci. This year we were going to celebrate the 250th anniversary of Beethoven, but all of the Beethoven concerts were smashed and ‘killed’. I feel terrible for Vienna because what a horrible thing that was.

Who should we celebrate this coming year?

Farrell: That is a hard question. I can think of several – Hayden, Mozart, Nicolas Poussin, one of my favorite painters, or Diego Velázquez, another one of my favorite painters. It could be any of these people.

Fitts: I’ll close with a story. We mailed *The Injection Fraud* in December, so everybody should have it by now. Many people in the United States haven’t received it yet, but hopefully, you will have it soon. Then we are sending to the printer now *Visions of Freedom*, which is the 3rd *Quarter Wrap Up*.

I asked Nina Heyn to do a whole series of articles about what artists have said about freedom – what is freedom and what are the visions of freedom. One of the stories that she told, which I had never heard, had to do with Picasso’s big Guernica mural of the bombings of Spain by the Germans. The mural is in Spain, but Picasso had a small reproduction in his apartment in Paris.

He was living there during the occupation, and a Nazi officer came by and was looking at his reproduction of Guernica. He said, “Oh, did you do that?”

Picasso turned to him and said, “No, you did.”

Farrell: That's good! I hadn't heard that before.

Fitts: Can you imagine being such a 'pistol' in the middle of an occupation that you would turn to a Nazi officer and say that! Now that is a man who believes in freedom!

Farrell: Good for Pablo!

Fitts: Joseph, any more thoughts before we close?

Farrell: No, I think I should probably take my patient little dog out. She is begging for me to run her outside.

Thank you for having me back on.

Fitts: This is Catherine Austin Fitts signing off on the *2020 Annual Wrap Up*. Once again, God Bless Joseph Farrell. Check out Giza Death Star, and get *Microcosm and Medium*. It's the book for 2021.

Ladies and gentlemen, have a great and prosperous New Year. Thank you for joining us on *The Solari Report*.
