“The hand expresses what the heart already knows.”

— Samuel Mockbee
The fight for human and property rights will be won in the trenches. Our most powerful leadership does not reside in the plush offices and penthouses found in financial capitals. Rather, our commanders are to be found negotiating for every hour and inch at local school board meetings, running for city council, challenging injection mandates at nearby hospitals, and lobbying state or regional legislatures. They are doctors and nurses who are saving lives; farmers making sure we have healthy food; sheriffs and police enforcing public safety despite challenging and stressful times; mothers, fathers, and teachers who will not tolerate the poisoning, brainwashing, or kidnapping of their children; and attorneys fighting for the rule of law.

The Solari team decided to dedicate the 1st Quarter 2021 Wrap Up to help you “Take Action.” We focused on publishing a range of tools—including forms related to the Covid-19 injections, resources pertaining to Solari Circles and taking action locally, guidance on use of digital systems, and the relaunched Silver and Gold Payment Calculator—to support you as you lead the charge in your daily lives and local areas.
Covid-19 Forms

We started with what are now four planning and negotiation tools related to the Covid-19 injections. We encourage you to print, adapt, translate, and update these forms as you see fit, as well as circulate and distribute them. This will help you use them to best effect in various jurisdictions and in response to evolving laws, regulations, and circumstances.

These forms are public, so please spread far and wide. They can be downloaded from: solari.com/forms

Family Financial Disclosure Form for COVID-19 Injections

This is a planning tool designed to ensure that family members who are considering one of the injections have done a complete due diligence on both health and financial issues and have taken the necessary steps to ensure that a vaccine injury or death does not bankrupt the family.

Form for Employees Whose Employers Are Requiring Covid-19 Injections

This is a form for employees to use with an employer who is pressuring employees to be vaccinated, to ensure that the employer has done full due diligence and will provide the insurance and other financial support necessary in the event of a vaccine injury or death.

Form for Students Attending Colleges or Universities Requiring Covid-19 Injections

This is a form for parents to use with school officials who are pressuring students to be vaccinated, to ensure that the school has done full due diligence and will provide the insurance and other financial support necessary in the event of a vaccine injury or death.

Notice and Declaration of Parental Authority Requirement of Disclosure and Safety of Medical Treatments

This is a form for parents of K-12 students to use with school officials to put officials on notice that the school may not take “any medical action in the nature of a vaccine or similar...intervention” with a minor without the parents’ express written informed consent.
Solari Circles

Helping our subscribers protect themselves and their family members from the “Injection Fraud” and the financial devastation that can accompany a vaccine adverse event or death was our first step. However, it was also clear that helping subscribers find like-minded people in their local areas—some of whom might wish to come together in a Solari Circle—would be a “force multiplier.”

Overview of Solari Circles

A Solari Circle is a financial action club of up to 12 members formed for education, action, and/or investment purposes—intended to increase personal and local resiliency. To help you appreciate the many ways that Solari Circles can help you and fellow subscribers in your local area, I asked attorney Carolyn Betts to write “Solari Circles: Take Action Together.” In addition to describing types of Circles and potential Circle activities, this excellent overview provides guidance on procedures and rules as well as examples of past Circles.

Connect.solari.com

Given the Covid-19 restrictions, our efforts to gather people locally without digital systems were not successful in some areas. Consequently, we launched open source social media software (connect.solari.com) to help Solari subscribers find each other and organize Solari Circles locally.

We have been testing this software with early groups in Tennessee, California, Vermont, Michigan, and Switzerland and plan to open access to all subscribers by the end of summer 2021. If you would like to start and lead a Solari Circle for your area, contact Customer Support or customerservice@solari.com and we will get you on now.

Going Local

To help a Circle get active and be effective locally, former town manager Gary Heckman added a new piece to his ongoing Solari series on how to interact with local government, titled “Solari Circles: Taking Action at the Local Level.”

Digital Systems: Mastering Technology and Minimizing Risks

Digital systems now come with significant personal, legal, and financial risk. To familiarize you with the risks and some of the strategies you can use to protect yourself, I asked Corey Lynn of Corey's Digs to write “Loosen Technology’s Grip on Your Mind.” It is in your own self-interest to take the time to learn how to handle these systems.

Taking Action with Your School Board

We also supported Corey Lynn in producing an excellent tool for helping you be effective in communicating with your local school board: “How to Challenge a School Board in 3–5 Minutes” (available at https://home.solari.com/how-to-challenge-a-school-board-in-3-5-minutes/). This tool includes talking points pertaining to Covid restrictions and injections, sex education curricula, and critical race theory, as well as information on school boards and numerous inspiring examples.
Silver and Gold Payment Calculator

If we are to prevail, we must decentralize money creation and circulation.

And if you have ever tried to organize a community currency, you know how difficult it can be. That is why Franklin Sanders of The Moneychanger created the Silver and Gold Payment Calculator—so that communities can simply start using their gold and silver coins to transact daily. This is community currency on the “JUST DO IT” method. It’s genius. Just get a group of local households and businesses to agree to use gold and silver—including, if you prefer, in combination with regular cash and coins—and you will have radically reduced an invasive digital transaction system from your life.

Franklin originally had the Payment Calculator on a spreadsheet. We teamed up with him to create an online software tool and phone app, but these were lost when our site went down in 2017. In the 1st Quarter 2021, we hired a software company to rebuild a much improved version. Check it out at silverandgoldaremoney.com. Phone apps for iPhone and Linux phones are on the way.

In the meantime, slowing down the move to an all-digital financial system is essential, which is why we are also encouraging you to use cash on Fridays. See our #CashFriday campaign at home.solari.com/cash-friday.

The Most Important Asset: People

I recently finished reading Furious Hours: Murder, Fraud, and the Last Trial of Harper Lee by Casey Cep. In the process, I learned more about the personal history of Harper Lee, author of To Kill a Mockingbird, one of the best-selling works of fiction in history. To date, Lee’s novel about a trial in a small Alabama town has sold an estimated 40 million copies and made Lee a multi-millionaire many times over.

One of the things I learned was that in December 1956, personal friends of Lee’s, after a successful year in their business, gave Lee—who was working as an airline reservation agent and barely getting by in New York City—the gift of a year’s wages with a note: “You have one year off from your job to write whatever you please. Merry Christmas.” The rest, as they say, is history.

This is what can happen when you invest in people, including yourself.

Think about it.

TAKE ACTION 2021
“Don’t ask if there is a conspiracy. If you are not in one, you need to start one.”

~ Catherine Austin Fitts
Introduction

A Solari Circle is a term coined by Catherine Austin Fitts, publisher of The Solari Report. It describes a financial action club consisting of twelve or fewer members formed for one or more of the following purposes:

1. Educating members about how the money works in their lives and communities;

2. Taking action to effect change in the lives of the members as regards their finances, health risks, and opportunities that affect their financial well-being; and

3. Pooling their money for making investments consistent with earning good returns, preserving members’ assets, avoiding control by big banks and other financial institutions, and reducing investment risks caused by organized crime and troublesome bank and corporate conduct and policies, while contributing to an economically productive, morally sound, and environmentally healthy future.

Solari Circles: Take Action Together

By Carolyn A. Betts, Esq.
Irrespective of whether the group’s primary purpose is education, action, or investment, it is wise for a Solari Circle to incorporate health and medical concerns as a component of financial health and planning. Severe financial risks to families can ensue from rising levels of toxicity from “the great poisoning” (including from GMOs, processed foods and sugar, fluoride, spraying, pesticides, plastics, injections and pharmaceuticals, and intensifying EMF radiation leading to weakened immune systems) and health-related crises.

The watchword for Solari Circles is *disintermediation*: whenever possible, cutting out centralized intermediaries, including major financial institutions (as opposed to local savings institutions and credit unions). Increased personal and local resiliency is the key to the exercise of local neighborhood control, individual sovereignty, and independence.
Basis for Formation of a Solari Circle

We recommend that members of one’s Solari Circle be selected with care from among only those individuals judged to be trustworthy and responsible and who have a willingness to commit approximately the same amount of time and effort as other members of the Circle.

Members might be selected from among existing groups, like former classmates, co-workers, neighbors, members of a church, or parents of children within a given age group. Alternatively, a few trusted friends might start a Circle for the express purpose of meeting, forming bonds with, and exchanging different points of view with trusted contacts across different cultural, racial, socioeconomic, political, or other groups. One might also intentionally seek to include in a Circle members of different age groups. In all cases, only members should be admitted who have been “vetted” by another member (or trustworthy friend of a member), so that the desired level of intimacy and trust can be achieved.

Members may seek to form a Circle to work through common hardships or challenges through spiritual or other means, including problems with debt; children with autism, other developmental disorders, or learning disabilities; family member illness; or dementia, death and dying issues, and mental illness. Members might also have in common place-based challenges that they would like to work through or take action on together, such as pollution from a local plant, water purity problems, crime, gangs, drug addiction and related policing issues, or local press cover-ups of insider deals (e.g., stadium funding).

Small business owners might wish to form a Circle to sponsor young people’s education at community colleges or job training programs as a means of both securing trustworthy employees with needed skills and reducing local youth unemployment and related crime and gang activity. They might partner with local high schools and community colleges to sponsor internship or externship programs.

An important aspect of a Solari Circle is that it must be fun and energy-enhancing. We all have lots of energy-draining commitments that suck up time and become a source of guilt. A Solari Circle meeting should be something that members look forward to and enjoy. In order to make a Circle experience positive, members should be comfortable with each other, open to new and exciting experiences, and eager to share knowledge and build intimacy. Food is always a good way to start, perhaps via a rotating multi-family or couples potluck dinner every Saturday evening.
Education Circles

Here are some ideas for a Solari Circle organized primarily for educational purposes:

1. Watch documentaries or read Solari Report articles together and discuss.

2. Invite a guest speaker who is an expert in some area of interest.

3. Assign research topics to members and have a member make a presentation at each meeting.

4. Manage a virtual investment portfolio (software products are available).

5. Assist members with their business problems and decisions involving money and the financial aspects of health issues.

6. Learn together to use technology or software and research relevant privacy, hacking, and similar issues that create risk for members.

7. Share the Circle’s library and research with other Solari Circles.

8. Find out about local banks and credit unions and evaluate their creditworthiness and positive involvement in the local community, perhaps by inviting a bank or credit union officer to speak before the group or a larger audience invited by Circle members.

There is nothing wrong with forming a Solari Circle solely for the purpose of educating members so that they can better manage their individual lives. Alternatively, an educational Circle can become a precursor for the Circle’s broader engagement as a group—taking action to make personal and community changes together.

Action Circles

If members of the Circle are interested in doing more than educating themselves, they may seek to join together to find ways to take positive action as a group to effect change in their families and communities. This type of Circle might be focused on within-Circle saving (“hands”), use of precious metal coins, community action, schooling and children, growing or gardening, improving health, estate planning, bartering and sharing tools, or purchasing clubs.

Hands

A Circle “hand” or partnership is a particularly useful and simple financial planning action technique to assist members in saving for some designated purpose. Each member contributes a given amount at each meeting (e.g., $100), and when a sufficient predesignated amount is in the pot, one member receives the whole amount. Then the process is repeated for each member. The hand can be thought of as a type of bank where the deposits are not in the bank—they are deposited with the Circle. Many immigrant groups use a partnership or hand to build the vehicle for saving the money to make a down payment on a car, business, piece of real estate, or home. When the hand group goes through this process together, members start to talk to each other and get help and strategic advice about money.
A hand can be a means to purchase precious metal coins, a solar-powered roof panel or other household device, a water filtering functionality, or anything the Circle members decide that they would like to purchase. The hand concept also can be used on a larger scale for private charitable contributions, such as assisting individuals or families in crisis due to overwhelming medical, rent/mortgage, or student-loan debts. In late 2020, a church in Iowa was reported to have purchased $5MM in medical debts of its members in order to pay them off.\(^1\)

Reportedly, entrepreneurs in New York have been known to do a hand with other entrepreneurs. The group becomes a self-help group for entrepreneurs, who get a lot of support and intelligence helping each other with problems. This is useful because entrepreneurship, particularly if for a sole proprietor, can be a very lonely existence. A hand or partnership can address this existential problem as well as financial and business needs.

### Use of Precious Metal Coins

Precious metal coins have many uses related to disintermediation, local control, and privacy. They can be used for transactions in place of paper or digital greenbacks (i.e., as—or as the basis for—a community currency) in order to keep money circulating within the local community—in other words, among merchants and other small businesses and outside the control of the government and central banks and safe from seizure, inflation, and devaluation of Fed-created and controlled currency.

Precious metals have been used historically for the storage of wealth and, in that sense, are a form of personal equity. Graphing the price of gold and silver against U.S. dollars, other commodities (such as oil), and other currencies can be a great lesson in international finance and the effect of monetary policy on the value of the national currency for Circle members.

### Community Action

Another idea for an action Circle is one whereby each member commits to discovering how the money works locally and undertakes a task to that end. Examples include attending town meetings, interviewing local decision-makers, or researching banks and other financial institutions where local money (e.g., tax revenue) is invested, and then reporting back to the Circle.

Where the Circle members discover that local or state legislatures or other ruling bodies (e.g., zoning boards) are slated to vote on actions that the Circle opposes (e.g., the building of a high-rise in a single-family neighborhood or the installation of high-tension wires or Internet towers nearby), Circle members can work together to respond. This could involve writing comment letters, sending letters to the editor, using the Freedom of Information Act (or the state equivalent) to obtain copies of proposed contracts, or otherwise spreading the word locally, after performing relevant research, as to why members favor or do not favor specific governmental or quasi-governmental actions that affect the community. Examples of proposed governmental actions that might invoke the Circle's response are the granting of tax incentives for companies moving into the locality, granting of zoning variances, annexing property into a local jurisdiction, and selling or leasing community-owned property like a park or green space.
In conjunction with its research on local issues of interest, the Circle might interview candidates for local office regarding such issues, based upon a prepared “unanswered questions” list developed by the Circle. Circle members might also wish to calculate a local Popsicle Index and make an effort to discover what factors are causing it to increase or decrease.

**Schooling and Children**

A Solari Circle comprised of members with young children might take action by creating a homeschooling library, including study materials, projects and activities, and copies of state requirements for qualified homeschools. For younger children, another Circle option might be to form a nursery cooperative. For those with children in local public or private schools, engaging in school- or school-district-based actions might be in order for such things as proposals to start school gardens, introduce healthy school lunches, start a recycling program, or change curricula to include classes on civics, nutrition, personal finances, or the risks involved in student loans and scholarships.

**Growing and Gardening**

Establishing and maintaining a community garden or orchard on land owned by a Circle member (or a community or privately owned space) and negotiating and documenting the terms of use is another activity that can be an organizing principle of an action Circle. Members can employ the concepts developed in the educational phase of their Circle to identify nutritional, health, or environmental goals by incorporating plants that have been shown to facilitate detoxification, build immunity, address common vitamin deficiencies, and attract butterflies, bees, and insects at risk of poisoning from pesticides. Members might even decide to engage in beekeeping and maple-syrup-collecting in order to save on the costs and assure the purity of sugar alternatives. In connection with a community garden or otherwise, Circle members may wish to make a group purchase of an expensive piece of equipment that they could then share, using the proceeds of a “hand” (described above) if they so desire.

**Improving Health**

Circle members may decide to establish individual exercise and diet goals and purchase related equipment that they can then use together or separately, with or without a tracking mechanism, to encourage each other in the process of pursuing their individual goals. As part of the educational function of the Circle, members may choose to do research in articles and books on nutrition and exercise and document good sources of information they find in the Circle’s library. In order to strengthen the bonds of Circle members, a Circle might employ a private personal trainer to lead exercises, or practice yoga at a member’s home on a regular basis, or sign up for publicly available classes together.

**Estate Planning**

An area often neglected by families is the establishing of a family or individual estate plan. Through a Solari Circle, members may take an inventory of the estate plan documentation currently in effect and make lists of questions to be addressed by a friendly attorney about how to deal with their individual situations. If members are approaching retirement age, they may help each other make decisions about career changes, semi-retirement, self-employment options, and timing of filing claims for Social Security and retirement benefits.
Bartering and Sharing Tools

An action-oriented Solari Circle may want to inventory members’ skill sets and areas of expertise so that members can use bartering arrangements to save money and obtain reliable services and advice from one another. This might or might not involve a valuation methodology so as to establish the fairness of exchanges in advance.

Purchasing Clubs

Along similar lines, a Circle can operate as a type of purchasing club—for example, to negotiate favorable prices for the purchase of food in bulk; share a side of beef; purchase fresh, locally grown fruits and vegetables at a local terminal; or incentivize local farmers to switch to organic from traditional farming for difficult-to-find non-GMO fruits and vegetables. In understanding a given farmer’s healthy and non-GMO growing methods, members of a Circle may be able to purchase produce that for technical reasons does not qualify for USDA “organic” labeling but nevertheless is as healthy as produce that satisfies organic standards in grocery stores. Similarly, locating and visiting local meat and egg producers can result in Circle members being able to both obtain favorable bulk pricing and assure themselves that cage-free and other humane growing and slaughtering methods are being employed.

The purchasing club concept might also be applied to the study, negotiation, and purchase of life, auto, disability, homeowners, and health insurance. Members can collect, analyze, and share their research and the results of consultation with experts (e.g., lawyers, accountants, repair contractors, and insurance brokers), or invite experts to speak at a Circle meeting, as a means of identifying particularly relevant issues of concern like health and weather risks, carrier reputation and creditworthiness, and ideal policy limits. In this way, Circle members can become well-educated consumers, make smart trade-offs, and protect themselves from nasty surprises while maximizing available benefits. The work of understanding key terms of typical policies, relevant state insurance laws, and tricks in making successful claims can be much less onerous when shared with other Circle members and their networks of contacts.
With the help of others, Circle members can put together lists of “what if” questions to address their particular concerns. For example, what if I contract Covid and have not been “vaccinated”—will my health insurance cover all of my medical costs and will my disability insurance cover long-term after-effects? Should I purchase rental insurance when I rent a car, or will my auto insurance cover this type of damage? Should I purchase Medicare Advantage or Medicare Supplement coverage, given my health risks? Then, members can help each other select insurance companies, policies, and policy terms appropriate to their individual circumstances.
Investment Circles

An investment Circle is a Circle formed for members to pool money and build financial research skills to invest in publicly traded or private investment vehicles and other assets. An investment Circle does not have to limit its investments to traditional stocks and bonds. For example, a Circle may decide to invest in farmland and lease it to local farmers. A Circle might want to start or invest in a food processing plant or piece of equipment that could be leased out or the subject of a sale and leaseback transaction. In these cases, the formation of a single-purpose investment entity (likely a limited liability company) may be used to limit the Circle’s risk of liability for unforeseen events.

An investment Circle with significant assets to invest may even decide to operate as an angel network or crowdfunding vehicle, on an investment or charitable basis, or as a type of local “shark tank,” inviting local college students or other entrepreneurs or small businesses to make presentations of new business ideas. This concept might even be employed by a Circle with limited investment resources by offering microloans for small ventures.

Investment in shares of local businesses is an attractive option, but such an investment should be undertaken with the advice of a member or advisor with knowledge of securities law and tax issues and experience in financial statement analysis and business development planning, among other things. Members need to do thorough due diligence of both the small business involved (including proprietors, officers, and other shareholders) and its market, to develop a list of representations and warranties by the business owner and a detailed purchase agreement that discloses
key information about past and projected future performance (including the assumptions underlying the projections). It is important that members identify liens, key contracts, and other liabilities of the business before committing to invest.

Another asset that has potential for an investment Circle is one or a number of residential or small business commercial mortgages (e.g., a mortgage on a small office building or apartment building). Caution is in order when investing in mortgage participations, however, because a participation is subject to more complexity than a whole mortgage and constitutes an unregistered “security” under federal and most state securities laws. Fannie Mae and Freddie Mac use standard promissory notes and mortgages, the form of which can be used by any lender. In the case of any mortgage, it is important that the lien be properly documented and filed in local land records after a thorough search to determine that no prior lien exists. A title insurance policy is essential in this regard.

Due to differing state laws regarding mortgages and the likelihood that Circle members will not be familiar with real estate markets in other states and jurisdictions, it is a good idea when investing in mortgages to invest in people who are known and trusted—and in real estate that is local. A Circle might consider purchasing mortgages on local residential properties originated by a local credit union or savings bank, which may retain the servicing function (i.e., collecting payments and maintaining escrows for insurance and taxes), thereby saving local homeowners from dealing with unknown servicers and providing profit-making opportunities locally rather than to New York or California-based financial behemoths.

Individual members of the Circle may have investments in restricted retirement accounts, which generally limit the types of qualifying investments—typically, to publicly traded stocks, bonds, and mutual funds. While there are legal hurdles to scale, it is possible to find financial institutions that make available self-directed qualified investments that will enable the asset owner to invest in unconventional assets like mortgages, real estate, leases, and other illiquid equity investments. As always, it is important to find a reputable company with which to do business, and this is particularly important when, as in the case of qualified investments, one wrong move can result in adverse tax consequences.

For a formal investment club that invests in publicly traded investment vehicles, whether stocks and bonds or mutual funds or other pooled vehicles, members will want to identify important environmental, social, and governance (ESG) issues to screen potential investments for positive environmental and social practices and good governance according to some sort of filter. There needs to be an evaluation of the pros and cons of potential trading platforms and brokers and identification of reliable sources of market information as well.

In this and other investment situations, it’s great to have relevant talent available to the Circle—a CPA, business attorney, local banker, business owner, or wealth manager—whether as a member or friend of the Circle.
Solari Circle for Kids

Organizing a Solari Circle for Kids is a means to teach financial concepts to children in a group setting led by one or more competent adult volunteer facilitators. Although it may be especially useful for homeschooled children, a kids’ Circle could also take place in a school-sponsored club setting. Some ideas for what a Solari Circle for Kids might accomplish include establishing a “hand,” participating in a phantom investment portfolio, learning about local political processes, and questing.

Hands for Kids

As with “hands” for adults, the Solari Circle for Kids agrees to an amount that each member will put into the pot each time the members gather. For example, if there are five children in the Circle, and they agree to put in $20 each month, they will have $100 each month with which they can carry out activities such as the following:

- Arrange for one child to take the pot and determine what to do with that month’s money. Ideally, this helps children learn to save.
- Sign up for Volunteer Precious Metals (VPM) or a similar service to make monthly investments in precious metal coins. Each month, one child takes the coins. For example, for $12 annually, VPM (based in Tennessee) allows those who sign up to participate in a Monthly Acquisition Plan (MAP). (Note: Participation in MAP requires a minimum investment of $300 in a given month, but there is no obligation to order in any given month. Tennessee-based Circles will want to look for other options, however, because Tennessee tax laws make such a program uneconomic for state residents.)
- Build up an investment pool that the group uses to make local loans and investments.

Phantom Investment Portfolio

An exciting simulation experience for older children and teenagers can be had through the creation and maintenance of a phantom investment portfolio on Yahoo Finance or similar software. This enables the members to watch companies’ stock performance. Young Circle members can choose to monitor the performance of companies
that they are familiar with (or that make or sell products that they use); various local businesses; businesses that provide services or products that dovetail with the children's hobbies, interests, or career pursuits; or companies based in other continents that the children are studying. Activities could include comparing the performance of U.S. companies to that of companies based in other countries, including observing what happens to share prices when major news developments occur. This exercise helps children understand the dynamic relationships in the economy—between governments and businesses, between institutions located in different regions on the planet, and between consumer products and the investment community. It can also make them aware of the competition for resources that leads to economic warfare and war, as well as the tensions that exist between investor returns and corporate and governmental responsibility.

**Local Political Processes**

Kids can also learn about participation in local political processes and how local rules are created that affect the local economy. This is an aspect of understanding the investment process, not only in the United States but globally as well. Participating in a local campaign, attending local city council, zoning board, and similar public meetings, and reviewing public budgets and legislative decisions can be enormously instructive for understanding why and how decisions that affect everyone in the community are made.

**Questing**

Adults and children can both benefit from “questing”—the creation of a community treasure hunt, described in the book on this subject, *Questing: A Guide to Creating Community Treasure Hunts*. This book is about a place-based education model called “Questing.” Questing is creating and exchanging treasure hunts in order to collect and share your community’s distinct natural and cultural heritage, your special places and stories. Each Quest is a specific treasure hunt focused on a particular community story, environment, or character…. Questing is local and organic; it is authentic and interdisciplinary; it is personal, collaborative, and intergenerational.
Privacy Concerns

A *sine qua non* of a Solari Circle is attention to privacy matters. This includes the Circle’s operations and communications among Circle members and also educating members how to restore privacy in their individual lives. Members of a Circle that meets in person should ensure that what they are doing in the Circle remains private by not meeting in the same room as any smartphone with the capability of spying on group discussions. Home-grown encryption or the use of reliable encryption programs is an alternative for Circles that meet using cell phone or Internet connections. An important syllabus item for an early-stage educational Circle is for members to commit to fully understanding the risks that digitally enabled devices pose in our homes, cars, and public places—and identifying methods, if any, of disabling, removing, or rendering ineffective the spying aspects of such devices. Members who have digital televisions need to understand that the typical digital TV incorporates a feature whereby the device can be turned on without owner permission and used to pick up private information for transmission to unknown players.6

A related issue is the fact that the goal of attaining financial well-being, privacy, and health cannot be achieved if one is the subject of mind control or environmental or other poisons. Thus, an important goal of any Solari Circle, whether it is primarily a bonding and educational experience or an active investment club with a large portfolio of shared assets, should be for members to help and support each other in getting sources of toxicity out of their lives—and dealing with family members who are at odds with the lengths that must be taken to do so. This means cutting off toxic people and media, food, environmental poisons and digitally enabled devices, medical procedures, and injections, thereby achieving as much individual sovereignty as possible. While many may not aspire to achieve a fully off-grid existence, there are many methods by which an educated citizenry can cut off or reduce the impact on their lives (and the lives of those they love) of steadily encroaching societal forces like:

- Transhumanism-related technologies
- Out-of-control and secret/classified bio-warfare experimentation
- Development of genetic operating systems and their imposition on individuals in the name of medical protection and safety from viruses
- Government sharing of private individual and corporate financial information with private government subcontractors in the business of aggregating and selling or using databases for profit
- Weather control through the spraying of toxic chemicals
- Ubiquitous long- and short-wave electromagnetic forces in public places
- Smart meters, automobile GPS “safety” systems, law enforcement devices that provide access to personal digital information, and communication and other devices that transfer personal use information to unknown or nefarious sources.

The rules to live by in this respect are “opt out” and “strive for transparency in all matters.”
Examples of Existing and Past Solari Circles

Texas Solari Circle

Interested individuals who attended a “Lunch with Catherine” event in Austin, Texas in 2015 formed a Solari Circle that is still ongoing. This locally based, in-person Solari Circle started with ten members. Members meet approximately once a month for two hours at noon on Sundays at Whole Foods, thereby relieving members of the burden of preparing meals and cleaning house for in-home meetings. Austin Circle members have included a corporate coach, a government pension educator and Solari team member, a naturopath, a person in the construction business, a member with legislative and political experience, and a member with commercial property expertise.

As the group developed, members generally shared on topics of interest to them but were less action-oriented than they had originally planned, although one member was “ahead of the herd” in achieving sustainability and becoming deeply involved in permaculture. Among the subjects of interest to members was an exploration of the finances of the city of Austin, a project pursued by one member in particular. Describing the Austin Circle’s experiences, one member reports that the group erred in not requiring that all Circle members be (or become) Solari Report subscribers, which, among other things, would have allowed Solari to help promote the meetings. The Circle was also unsuccessful in using group-sharing software; members suggest that a more user-friendly tool for this purpose would be particularly welcome. On the plus side, a member shared that there is a significant degree of relief in talking “Solari jargon” on a regular basis with trusted friends who are not family, social circle, or job team members.

Tennessee Dinner Circle

Catherine Austin Fitts was a member of a dinner circle formed by her neighbors in Hardeman County, Tennessee, where members held a once-a-month potluck supper and engaged in activities together. This Circle’s areas of interest included growing edible landscapes and gardens, becoming more resilient through learning to use guns, helping each other with preventive health measures, and doing more for self and getting results. This Circle arranged for presentations by local neighbors with experience in areas such as starting an orchard, raising livestock, and gunsmithing.

First Ever Solari Circle Experience

The First Ever Solari Circle (“FESC”) was an investment Circle formed in 2005 as a limited liability company with a formal operating agreement (because a separate entity is needed for holding securities and issuing K-1s for tax purposes). FESC was formed by Catherine Austin Fitts and nine friends and Solari team members living in locations scattered across the United States. Additional members were added on a referral-only basis according to a procedure established in the FESC partnership agreement. FESC was operated as and taxed as a general partnership, although the formal investing entity could have been a general partnership with the same result. Members met for approximately one hour each week on Monday evenings by telephone (this was before the advent of Zoom and Skype, which would be more appropriate for such a purpose now).
The broad geographic distribution of FESC members (from East to West Coasts and both Northerners and Southerners) provided the opportunity for members to learn what was happening on the ground across the country on a weekly basis. A benefit of regularly meeting and sharing “on the ground” stories derived from media and anecdotal sources—and then watching the vicissitudes of the stock and bond markets—was that members, with a great deal of input from Catherine Austin Fitts, an experienced investment banker, got a clear picture of how one could “connect the dots” between market and central bank money flows and information inputs (i.e., political and other national and international developments). Then, as discrepancies between official government accounts and market developments became manifest, members were able to postulate as to the source of the discrepancies.

The initial investments of the FESC were virtual investments using simulation software. Fortunately, FESC had one member, Paul, who had investment club and venture capital experience and the desire to carry out the Circle’s investing activities through a brokerage account. Paul also did a highly informative weekly “market roundup” to report market developments in the areas of interest to the Circle (mining and precious metals, mostly). Because Paul had a subscription to Jim Sinclair’s gold and silver market newsletter, Paul’s market roundup also allowed Circle members to hear about Sinclair’s views on the precious metals markets and national and international political developments as they related to the metals markets.

Paul was responsible for making investment recommendations, executing trades, and arranging for the preparation of annual K-1s. He also ended up doing most of the research on companies in which the Circle was interested in investing. Unless a member wants to make such a commitment, the assumption of the lion’s share of investment duties by a single Circle member is not ideal, of course. In any case, to some extent, different members undertook to research different publicly traded stocks and reported their findings back to the group. The actual stocks in which FESC invested involved American and Canadian companies in the business of gold and silver, gold and silver mining, and oil and gas. The members also wanted to invest in companies that offered healthy foods but had difficulty identifying publicly traded alternatives.

FESC was liquidated in 2012, and profits (which were respectable) were distributed to members according to their respective shares of the partnership because the various members’ contributions were not equal. The Circle found that calculation of the sharing of profits and losses can become somewhat complicated when different members contribute additional funds for investment after the initial formation and, therefore, special investment club software was used for these calculations.
Procedures and Rules

Although there are no hard-and-fast rules, achieving the types of goals described here will be immeasurably easier if Circle membership is limited to those who are regular followers of the Solari Report, if not subscribers. To achieve success and efficiency within the Circle’s agreed purpose, the agenda for the first meeting of a newly formed Solari Circle might look something like this:

1. Perform introductions and share contact information.
2. Establish consensus on Circle priorities and areas of interest.
3. Establish individual priorities and areas of interest.
4. Assign roles.
5. Determine whether meetings will take place on a strict or flexible basis and establish meeting times (start time and end time) and expected or desired time commitments.
6. Select a physical (and/or virtual) meeting space.
7. Identify digital or other tools and apps (available or to be purchased) to facilitate collaboration, knowledge management, archiving, and documentation of group investment and other decisions. (Note, however, that there is nothing wrong with a Circle’s decision to confine its library to hard-copy and paper records.)
8. Select a name for the Circle.
9. Determine a means of communication among members between meetings.
10. Establish reasonable time budgeting.

Part of establishing any regularly meeting group involves identifying the roles and responsibilities to be divided among members. These roles can be rotated, appointed by elections, determined on a volunteer basis for a designated period of time, or decided on a meeting-by-meeting basis. In any case, it is useful to make a preliminary list of at least the essential functions to be covered, including some or all of the following:
- Host (if the meetings are held at members’ homes)
- Meeting chair
- Agenda-setter and communicator
- Treasurer (who may establish a Circle bank and/or brokerage account, if needed)
- Knowledge manager
- Archivist
- Secretary or meeting note-taker or recorder
- Group representative for Circle outreach
- Person responsible for tax matters (a role that is particularly necessary for investment Circles and/or Circles that pool money for various charitable and other purposes)
Depending on the role, a given individual could function in multiple roles; conversely, a particularly time-intensive role (e.g., investment tracker for an investment Circle) might be shared by two or more members. It should be a group goal to weed out “slugs” (people who do not contribute or who sabotage). In addition, the group should avoid burdening a particularly productive member with too great a load, so there is no burnout. Members should decide whether they want to make a recording of meetings, take notes by laptop during the meeting in an agreed format, or develop some other method to keep track of group decisions and issues. As regards tools, members may want to learn together how to employ open-source tools and systems and address privacy and security issues. If the Circle plans on employing cloud storage, thorough research may be in order to identify risks of governmental interference, hacking, privacy violations, and other undesirable intrusions. If members will be using cell phones, similar issues may need to be addressed, including identifying preferred antivirus, anti-spam, and anti-hacking applications and methodologies. If group members do not share a common operating system format, members may want to determine how communication snafus will be addressed (e.g., Apple vs. PC). Members also may wish to agree on a search engine (e.g., DuckDuckGo) to avoid common privacy issues. Social media platforms should be used with great caution.

As a means of achieving greater organization, Solari Circles may wish to employ Robert’s Rules of Order, perhaps in a shortened form, in conducting their meetings. It is also recommended to establish terms and conditions similar to Solari’s Tea Time and Event Policies, including adherence to the Chatham House Rule.

Endnotes

I want to preface this article by referring the reader to The Solari Report for a more complete definition and explanation of what a Solari Circle is. You may research the Solari library for various reports and descriptions of a Solari Circle. For the most detailed explanation, see the article by Carolyn A. Betts, Esq. in this Wrap Up, titled “Solari Circles: Take Action Together.”

As a source for my article, I am specifically referring to Carolyn Betts’ section about Action Circles and the Community Action segment whereby Circle members discuss how the money works locally. As a further explanation, by a “local government,” I mean your community in general: your town, your borough, your township, your municipality, your county, your school district, and, in some cases, your state. These various governmental units are the types established within the United States system; different states may also have other forms of local units. However, many Commonwealth countries and countries in the G20 operate on similar systems and my comments may be applicable.

The governing authority of your local government may be found in their charters—whether it be villages, cities, townships, or counties—or through their state statute or constitution. Some are Home Rule and are incorporated. There are also subcategories such as Road Commissions, utility authorities, hospital authorities, and so forth. The type of government dictates the form of government. Each of these has governing bodies that make decisions for their unit of government, and all hold public meetings of some sort. Their rules of procedure are found in their charters, organization documents, ordinances, or in the statutes that formed them. All are available to the public and may be acquired from the local government offices.

As a retired municipal manager with 28 years of experience, I have encountered many instances that should have or could have used input from the citizenry (Solari Circle members) for further information or, for that matter, scrutinization.

I will discuss various aspects of local government, not in any particular order, that should be closely watched by the public to assess how it impacts them.
Significant Statutes Affecting Public Bodies

There are two noteworthy regulations to which all public bodies must adhere. The first is the Open Meetings Act, which all fifty states have in effect. The Open Meetings Act mandates that all public bodies deliberating public policy must do so in a public forum. In other words, all meetings must be open to the public and must be either posted or published in advance of the meeting. There are some exceptions to this Act whereby a public body may go into "executive session": collective bargaining; consider the purchase or lease of real estate; discipline or suspension of a public official; legal consultation with specific litigation; and consider employment applications. In each of these cases, there are certain criteria that must be met. It should also be noted that going into a closed session is only allowed “to consider, consult, or review.” Any action must be made in an open meeting.

The second law is the Freedom of Information Act, also known as FOIA. Again, all fifty states have freedom of information laws that govern documents at the state and local levels. With a few exceptions, all public records are subject to review and inspection by the public. Each state has procedures for obtaining these records, but all are subject to this law and must allow inspections of most public records.

Public Meetings

First and foremost, attending all public meetings is a necessity. Public meeting attendance is also one way to meet and get to know your public officials and provide your input and concerns. The Open Meetings Act requires that all meetings be posted and open to the public with few exceptions. Even committee meetings of elected officials are subject to this Act. Every decision by a public body requires that it be made at a public meeting. Public meeting agendas must either be posted in a conspicuous place or published in a local newspaper with local distribution. Major decisions by a public body require a public hearing notice describing what the meeting is about. As I discuss each topic, I will mention the ones that require a specific public hearing notice.

In addition, the Freedom of Information Act provides a means of gathering information after the fact. All local units of government must respond to these FOIA requests within a certain timeline.

- Catherine Austin Fitts
Budget Meetings

One of the most important types of meetings of your local unit of government is the budget meeting. This elaborates on how your tax dollars are being spent. The budget process is a long and involved procedure and takes local administrators many hours to accomplish. A public hearing is required, and detailed information is provided on each line item of the budget.

This is a meeting that should not be missed—and an excellent time to ask specific questions. Does this address your particular concerns? Are your taxes being wasted on unnecessary items? What services are being provided? What is being spent for public safety (police, fire, ambulance)? Does your community provide the services you want, such as animal control, building inspection programs, or recreation programs? What compensation and benefits are provided to employees and elected officials? Do they compare with other similar units of government? What tax rate is required to meet this budget? What capital improvements are in the budget? Are there any grant programs anticipated, and if so, what is the local share and how do the costs compare without the grant? These and other pertinent questions should be asked and must be answered by the local officials. I have found that many local elected officials are not very well versed in the budget and leave it to the appointed administrators to handle without much input. This should not be the case. They chose to run for office and should know the details of everything, especially the budget. After all, it’s your tax dollars at work.

Non-elected (Appointed) Officials’ Meetings

There are many committees and commissions whose members are appointed by the elected officials. These groups conduct crucial meetings that could have a significant impact on your community. Some committees are appointed for specific purposes. Examples include street committees (whose members decide which streets and sidewalks to improve), library boards, recreation boards, and public improvement committees.

Two of the more important committees of this type are the Zoning Board and the Planning Commission. Both of these make recommendations to elected officials that could have a potentially significant impact on the public, and attending their meetings is a must. All of their meetings are subject to the Open Meetings Act, but the final decisions are made by the elected officials, with some (such as zoning changes) requiring a special public hearing. Some boards are autonomous and can make their own decisions without elected officials’ approval, including Downtown Development Authorities, Building Authorities, Hospital Authorities, and Public Utility Authorities. All of these authorities and boards are also subject to the Open Meetings Act and must post their meeting dates and times, and public attendance is open. If a person would like to get involved with local government but chooses not to run for public office, an appointed position is possible. In my experience, I have found that it is hard to find people interested in these positions, so if you make yourself known to the governing body, you have a good chance to be appointed. This is one area in which Solari Circle members could get involved.
Zoning Board and Planning Commission

As mentioned, these are two significant appointed committees that can make some serious decisions impacting the public. Planning Commissions typically do community research and surveys to determine what is necessary for long-term growth. They usually work in conjunction with Regional Planning Commissions (county or multi-county-wide) to obtain information on their specific community and determine needs and desires related to growth. They may use community surveys to gather input from local citizens to make these recommendations. Planning Commissions may make recommendations to the governing body for things such as sign ordinances, zoning ordinances, streetscape plans, and windmill and cell/radio tower regulations.

The Zoning Board and Zoning Board of Appeals basically carry out the requirements of the Zoning Ordinance as recommended by the Planning Commission and adopted by the governing body. Again, all of these meetings are subject to the Open Meetings Act. The Zoning Board of Appeals can make variances for the Zoning Ordinance but must meet specific criteria to do so and must make clear what criteria they used in their decision. These requirements are very specific and are contained in the Zoning Ordinance. The Appeals Board cannot randomly make variances for just any reason. If you or your community will be impacted by a Zoning Board’s decision, you should attend their meeting. Their decisions are appealable to the circuit court for the county in which the property is located. In addition to the meetings being subject to the Open Meetings Act, in some instances, besides the public notice requirements, individual first-class mail notices are required for persons or property within a certain distance affected by the appeal.

Tax Abatements

Sometimes developers, investors, or builders will approach the governing body requesting property tax abatements or public land acquisition for their project. There are several abatement programs such as commercial development, industrial development, and residential development. Each of these types of developments would receive some sort of incentive to do their project, such as a property tax reduction for a specific amount of time. Local units of government should consider what the long-term benefits to the community are for these abatements. Do they provide employment opportunities? Will they increase the vitality of the community? Will the project encourage other businesses to open, and, more importantly, how will it impact existing businesses? Does it involve housing opportunities? For what area of the community is the project intended, and how will it impact that area? Will the benefits persist after the abatement program is over? Will the abatements improve the community? Exactly how and for how long does the abatement program benefit the community? These are only some of the questions that should be asked, but there are many more depending on the type of development.

The Planning Commission is the body that will look at the project and will hold the public hearings required. If the Planning Commission approves the project, the Commission will forward it to the governing body for their approval or rejection. In any case, the governing body
must also hold public hearings and give public notice to get citizen input.

Another request that developers sometimes make is to acquire public property either for free or for a reduced rate. This is one area that should be scrutinized thoroughly. Once a property is out of the hands of the public, it is gone forever. This takes some very long-range foresight and must be looked at in terms of how it will affect future generations. This also pertains to road abandonments or vacations, even if they are not developed yet. Any of these procedures also requires public notice and a public hearing process.

**Press Relations**

This is one of the most important practices that a community, through its elected and appointed officials, should adhere to: Keep good relations with your local press—such as local newspapers, radio stations, or television stations—and do not make decisions “under the table.” Make certain that you follow all the public notices and Open Meetings Act requirements. The press can either be a good friend or an unfavorable enemy of elected and appointed officials. The press has a way to stay current on issues and will ensure that everything that happens stays “above board.” The press is the communications channel to the public. Local officials should answer all questions openly and honestly. The biggest faux pas that public officials make is to try to hide or cover things up. This will always come back to haunt them. As a Solari Circle member, stay current with the press.

**Elections: Know Your Candidates**

This is the most important and significant issue that the citizens of an area will face: Who will be the decision-makers of their community? In townships, it may be the supervisor and trustees; in municipalities, it may be the mayor and council members. In counties, it may be the commissioners, county officials such the clerk and treasurer, the prosecuting attorney, and, most importantly, the sheriff. In states, it may be the governor, the lieutenant governor, the representatives (House and Senate), and state officials such as the Secretary of State, Treasurer, and Attorney General. It is so important that you know who these people are, what they stand for, and what decisions they are likely to make.

The first step in this is to meet the candidates. Most small communities have a “meet the candidates” forum where citizens can meet, greet, and ask candidates questions. Other smaller communities may have a question-and-answer section in the local newspaper. On a larger scale, your community may have debates at which the candidates will have to answer pertinent questions. Citizens (Solari Circle members) should attend these sessions and do research on each candidate. Note that what a candidate says and what they go on to do may be the opposite. That is why it is so important to research each candidate, and, using a legal term, exercise “due diligence”; get to know them inside and out.

Once a person is elected, it is imperative that you attend every public meeting that you can. So many decisions are made at public meetings that will have an impact on you and your community. Know where the money is being spent.
Other important members of the community you should get to know are the Chief of Police (most are appointed) and the Sheriff (who is elected). In my community, we had a sheriff candidate who said they were running because they needed health insurance. Guess what? They won. Besides the Prosecuting Attorney, they are the chief law enforcement officials of a community. Get to know them by name and keep in contact with them.

Summary for Solari Circle Members

In her article, “Solari Circles: Take Action Together,” Carolyn Betts describes a Solari Circle as “a term coined by Catherine Austin Fitts, publisher of the Solari Report. It describes a financial action club consisting of 12 or fewer members formed for one or more purposes.” She further describes (under Action Circles-Community Action) that “each member commits to discovering how the money works locally and undertakes a task to that end.” Ultimately, everything reviewed in this article is a means to finding out “how the money works.” If you attend meetings, watch for public notices, follow the local news, know your politicians, get involved by either running for public office or volunteering for one or more of the many appointed committees, and, most importantly, analyze your local government’s budget, you will better understand “how the money works.”

If you disagree with any decision by your government officials, make that well known by voicing your opinion at meetings, in letters to the officials (or the newspaper), through electronic means, via community action groups, and so on. One very important caveat is to make sure you know what you are talking about; do your research and don’t be misinformed. The worst thing that you can do is complain about or take an adverse position on something when you don’t know all the facts.

Remember, as a Solari Circle member, there is strength in numbers, and a group can accomplish much more than an individual.

Related Reading

Isn’t it funny how industry leaders believe that turning off lights, finding a channel on the TV, or turning on the radio constitutes as something being “smart”? Are these difficult tasks for human beings? When did humanity get so lazy? Nowadays, everything is “smart,” except for you, of course. They want you to believe you are incapable and need their help, while they turn on the mic, the camera, implant subliminal messaging or frequencies, and spy on you through constant surveillance systems running across the entire grid.
Most people don't even realize the damage that is being done to them, the mind control they are sipping in, and the constant energy-sucking distractions that are steadily stealing their lives.

There was a CBS reality television series called *Hunted* that aired back in 2017, whereby 18 everyday people set off in nine groups to try to get off-grid by evading the FBI and U.S. Marshals in a time where everything is digitally tracked. If they could last the full 28 days without being hunted down, they would win $250K. It was interesting to observe how some of the seemingly obvious things to avoid, they found very difficult to live without, and how at every turn and every corner they were picked off due to surveillance everywhere.

Now more than ever, it is becoming increasingly important for people to protect themselves from the various methods of mind control being utilized through technology. It is equally important to protect one's privacy and preserve time and energy for living a more fulfilled life. Initially, it will take some time, courage, and support to cut a path toward healthier and safer habits and routines. This is where the Solari Circle comes in and why it is so important.

Working together in a Circle will provide a supportive system with loyal people who have each other's backs. Circle members can tackle tasks together, research and coordinate plans, and in this case, implement some new technology and features that will assist the Circle in moving forward in a safer environment for their home, families, and the Circle itself.

This piece is designed to inspire a discussion of "best practices." We expect it to start a rich discussion that can lead to better network intelligence on how to use technology wisely.

It's important to recognize and understand that nothing is truly 100% "safe" when it comes to privacy on the Internet, but we do the best we can to protect ourselves and minimize our exposure and footprint. If the powers-that-be truly want access, we all know they control the doorways.
The Infrastructure of Influence Operations

The infrastructure is somewhat boundless and seems to seep in from every crevice, but there are ways to minimize and avoid much of it. It's important to recognize who and where it's coming from, in order to begin removing and limiting all of this noise.

The Influencers

- Social and news media
- Entertainment industry
- Education system—schools
- Politicians
- Big corp, big tech, and big pharma
- Agents of influencers who make it seem like there is organic support for the narratives being pushed
- Unknowing individuals who have been manipulated
Applications Used for Mind Control and Tracking

- TV
- Radio
- Internet
- Smartphones and smartwatches
- Video games
- GPS systems in vehicles
- Cell towers
- Smart meters
- Surveillance cameras on every corner
- Satellites and drones
- Transhumanism-related technologies such as brain-computer interface (Neuralink), messenger RNA (mRNA) gene “therapy,” virtual reality, or hearing/vision enhancements
- AI and robotics
- Smart devices, such as Amazon’s Alexa or Echo, Apple’s HomePod, or Google’s Nest Cam
- Materials received in the mail (e.g., Covid or injection-related propaganda, climate fear-mongering, political misinformation)
- Visual aids such as signs, stickers, and plexiglass walls (e.g., conditioning to “socially distance” and fear other people, visual cues that instill division)

Covert and Invisible Forms of Mind Control

- Long- and short-wave electromagnetic forces emitted in public spaces to induce certain feelings
- Frequency manipulation
- Subliminal programming
- Brainwave manipulation
- Entrainment technology
- Waveforms (can be transmitted through the entire power grid into our homes)
Minimizing Risks and Maximizing Your Circle

This is one of the most important checklists you will ever complete. Sure, it may take several weeks, but that’s okay; this isn’t a race. It’s important to accomplish these tasks sooner than later, but it will also feel like a bit of a transformation, so pace yourself. Many of these you can do yourself, but some of them will require a group effort. This is a good way for the Circle to come together, selecting which tasks to tackle first while assigning some of the items to the individuals most qualified to do them.

I would highly recommend working on the items that will impact the Circle first, such as setting up a private open-source cloud communications system for the group, encrypted email accounts, and encrypted calling services, such as Telegram. It might be wise to bring your cell phones to one meeting so that everyone can help one another out while installing these apps and carrying out other cell-phone-related tasks listed below. Once that is complete, cell phones should not be brought into meetings.

Many of these items are things you can do in your home and on your own. You may welcome them as new habits you enjoy. Other items may be a little more challenging, which is why the support of the Circle is so powerful. You will have multiple people to offer a helping hand.

The Basics

- Unplug and turn off your TV, or get rid of it entirely, especially if it’s a smart TV.
- Limit all of the sounds and notifications on your phone to minimize constant distractions, and try to use the speaker when taking calls, rather than holding the phone against your ear.
- You may consider setting up a second phone number on an app such as Kall8 to have forwarded to your phone. This will protect your main number and limit the amount of robocalls and other potential nefarious actions against you.
- Clean out and organize files on your computer. Remove the 200 bookmarks you don’t need and only keep a small handful. Remove all the clutter to free your mind. Remove all application software you do not use.
- Clear your browser cache weekly. For speed, browsers will automatically cache website information and sometimes they don’t accept change very well. Here are some handy cache clearing instruction links for MacOS Safari, iOS Safari, and FireFox. We do not recommend using Chrome or Outlook.
- Always read the terms and conditions when downloading or installing any apps. It is not recommended to install social media apps; these are the most dangerous ones because they sneak in information that allows them to access other areas of your phone. The 2013 documentary Terms and Conditions May Apply is a must-watch.
- Never save your password when asked. If you forget your password and want to generate
another, you will not be able to override the one you said to save. You will need to go into your Key Chain, find the password, and manually delete it from your system. The best policy is to not save your passwords to your computer. To keep them safe, write them down on a piece of paper and put in a safe place. You can't hack paper. Computer security experts have begun recommending password managers such as Dashlane,1 1Password,2 LastPass,3 and RoboForm.4 There are some major advantages to these services, as they generate and remember your passwords for you. You create one master password to access them. The information is saved onto your devices and powerfully encrypted so it's almost impossible to hack. Be sure to always set up passwords and logins with double authentication where it's available.

• Unsubscribe to everything you find unnecessary. They can put subliminal messages directly into emails as well.

• If you are backing up files from your computer, back them up to an external hard drive, not to a public online cloud. Alternatively, if you are working with a group and need to share files, you can set up a private, open-source cloud. See instructions and tips for setting one up below in “Using Technology to Your Advantage.”

• Take some time every day to be out in nature and ground yourself.

• Meditate and/or pray several times a week, and consider Qi Gong to clear your energy field each day. This will help ground you as well. Lee Holden is a great source for free Qi Gong videos you can follow along to.5 Catherine loves Yuan Gong,6 and also provides a prayer book on the Solari Report, available in pdf download or for purchase.7

• Keep your computer and mobile phone operating systems and applications up-to-date.

Cybersecurity and Privacy

• Ditch the smartphone if you can. If you can't, we find Apple phones and Linux-based phones far preferable to Android. Beware, because both Apple- and Linux-based phones must connect with telecommunication providers, and that is where a lot of the trouble can start. Linux-based phones take more knowledge and enjoy less tech support, so appreciate you may need help from a Linux phone pro. Apps are the big problem, so be careful what you download and put on your phone. Consider leaving your phone turned off and in the car. If you want to use a Faraday bag, appreciate that most do not work. Here is one that does, by Select Fabricators.8

• Remove all tracking apps from your cell phone, and all applications you don’t need or use.

• It is best to uninstall social media apps from cell phones.

• Use encrypted services for phone calls and messaging, such as Telegram,9 which can also be utilized on a desktop computer.

• Don’t sleep with any spyware technology in your bedroom, especially a smartphone.

• Turn off Bluetooth on your phone unless it’s absolutely necessary to occasionally turn on.

• If using GPS in your vehicle, be sure it is not one that transmits. Some experts believe
all of them do; others say no, just some. We are not sure. Consider buying a hard GPS. Never ever use Google maps. It would be a wise idea to pick up some good old-fashioned large printed road maps. Know where you are going using maps and be aware of the institutions and sites around you (like military and enforcement locations).

- No video platform is safe, so understand that you may be recorded.
- Avoid corporate operating systems, including all Windows operating systems, Chromebooks, and Amazon Fire computers.
- Use Libre Office® or OpenOffice® instead of Microsoft Office.
- Use Thunderbird® instead of Microsoft Outlook.
- MacOS is recommended, or load a good Linux desktop distribution like Ubuntu Desktop® or Mint® on your existing PC hardware.
- If you’re using MacOS, make sure your firewall is enabled and you know how to configure it.
- Use ClamXAV Anti-Virus.
- FireFox has a built-in ad blocker or you can use Privacy Badger for FireFox. For all browsers, you can use uBlock Origin ad.
- Experts have differing opinions on VPNs, which are virtual private networks that mask and hide your location, providing privacy and anonymity. I personally use VPNs and have found them to work quite well for me. That said, proxy servers are also beneficial and some experts prefer using those. A proxy server is a remote application or appliance that acts as an intermediary for requests from clients seeking resources from servers that provide those resources, which allows you to mask and hide your location. Some popular free proxy servers are: Hidester, hide.me, ProxySite, KProxy, VPNBook, Megaproxy, and Zend.
- For search engines, consider using DuckDuckGo for a start page.
- Avoid visiting questionable websites to avoid viruses and trojans.
- Scams are at an all-time high, so be careful not to click on links inside emails, but rather type the url into a search bar instead if you’re not sure the email is legit.
- Don’t use unsecured public Wi-Fi. In your home, connect directly by ethernet if you can. If your ISP provides you a router with built-in Wi-Fi, ask them to turn it off for you; then purchase a Netgear or Linksys mesh router and plug it into the back of your router, which will allow you to turn off Wi-Fi when not using it. Here is a handy tutorial.
- Data scraping companies compile information on individuals that they use to build databases called a “background search.” This information (often used by prospective employers) generally includes a person’s name, relatives, work history, criminal background, places of residence, social media, and more. Take the time to go into various background search databases and remove yourself from them, along with all other sites, and reduce your digital footprint. Every time you enter your full address and contact info into another website, there’s a good chance it’s being sold off to third parties.
• Don’t use email services by large corporations. If you need an alternative, we recommend ProtonMail\textsuperscript{9} and StartMail.\textsuperscript{10} If you’re looking for a full-service provider that can provide website registration, hosting, and email for your domain, we recommend infomaniak.\textsuperscript{11}

• An often overlooked source of domestic electromagnetic field (EMF) and radiofrequency (RF) exposure comes from nearby high-tension power lines; AM, FM, and shortwave broadcast; TV stations; and nearby military bases. These sources often present radically higher EMF and RF exposure levels than cell phones and Bluetooth. Effective radiated power can reach, and possibly exceed, one million watts. The only way to really know your level of exposure is to hire a reputable engineering firm that can perform the required studies. This is an expensive solution, but it will remove all doubt.

Observation and Introspection to Avoid Mind Control Techniques

• When spending time on a computer, cell phone, or television, pay attention to your energy or emotions switching, like suddenly feeling warm and fuzzy or irritated. If you feel this shift for seemingly no reason, there is a good chance you were subjected to a subliminal message or wave. Clear your mind, clear your energy field, and center your heart to get back on track. The more in tune you become, the more you will recognize the need to minimize use of these devices and free your mind from the attacks.

• Observe your reactions: If you are doing, feeling, thinking, or saying something that seems “off” to you, you were likely manipulated.

Did you suddenly feel drawn to or inspired by someone who you don’t really care for?

• Check yourself with your friends or Circle to help keep you on track.

• When you turn on a piece of equipment, understand what their incentive is. Are they selling you something? Are they trying to help you or harm you?

Protect Your Children

• Everything above that pertains to phones, television, and the Internet should also be managed on your children’s devices, with the addition of parental control settings.

• Not to invoke fear, but I do not recommend a smartphone for children due to the high level of indoctrination, entrainment mind control tactics, and predators targeting children.

• Pornography is a huge industry that directly correlates to the child trafficking industry, generating $150 billion in revenue annually. Protecting your children from technology that drives these industries is of the utmost importance. I have written extensive reports on child trafficking nests and how they operate. Pornography is the gateway. The entertainment industry is famous for sexualizing children (just look at Netflix’s Cuties).\textsuperscript{14} Pornography is also a trap—if someone is browsing pornography and stumbles upon kiddie pornography, a control file may be created, which can be used at any time to entrap a person into a felony, or for blackmail purposes.
• Search your local sex offenders registry and be aware of who is in your neighborhood. You may consider showing the mugshot photos to your children and letting them know that they should not befriend these individuals if they see them in the neighborhood.

• If your children are still in public schools, be sure to review their entire curriculum, especially the books they are to read and any books being read to them. Also explore the school library. They have been indoctrinating children through books for several decades now—filling their minds with broken families, the message not to trust parents, the transgender agenda, the climate change hoax, very dark stories to instill fear, and books that incite rage and anger.

• Find out what your children are learning about and discussing in school, what signs and visual aids are posted throughout the school, and what they are playing on televisions in the classrooms.

• Most public schools are pushing the transgender agenda, telling children they can “choose” to be a boy or girl and trying to create a gender identity crisis. From locker rooms to sporting events, to pronouns to removing the words “mom and dad,” they are seeding children’s minds with mass confusion.

• Planned Parenthood is involved with many public schools as well, and their goal is to sexualize the children. Find out if they are involved with your children’s schools.

• Climate change and sustainability are a huge veil that has been placed over children’s eyes to make them believe they need to grow up and fight for the environment, when it’s really about training them to be good soldiers for controlled smart cities. Be sure to teach your children the difference between respecting and caring for the environment versus the “climate change” agenda. Agenda 21 and Agenda 2030 are good places to review this.

• Solari has a dedicated page covering mind control techniques used on young people and children.

Using Technology to Your Advantage

- Create an open-source cloud that the Circle can use to share documents. Get off the public cloud. Set up your own cloud on a local computer that someone in the Circle owns so that documents can be shared among the group. Someone in the Circle who is technology-oriented would be best suited to set it up. Here are some basic instructions for utilizing open-source software. OR, if you have someone who is technologically savvy, the better option would be to set up a cloud server from scratch on Linux. OR, set up a Network Attached Storage (NAS), which is cloud-based open-source software that is preconfigured on the hardware and software level, that can be purchased.

- There are a lot of EMF detectors and devices to protect from too much EMF, available online. I have personally purchased a few items from LessEMF. There are other stores available as well, such as EMR Shielding Solutions and Select Fabricators, but I am not familiar with them or other companies, so be sure to do your due diligence with research. That said, Catherine’s tech team says that the Faraday pouches from Select Fabricators do work, so I am optimistic about their other products.

- I use an iMRS PEMF mat for health and keeping my energy field clear. Catherine uses Blushield for EMF protection, and QRS for health and keeping her energy field clear.

- The Circle might wish to brainstorm some ideas for utilizing the Internet to educate others or sell a product or service to raise funds that can be used for small software or technology purchases.

- Play some Bach or Gregorian chanting or Buddhist chanting to relax to soothing frequencies.

Free Your Mind

Once many of these tasks become habits and routine, you will begin to feel a sense of relief, like a weight has been lifted off your shoulders. You will have more free time, less distraction, and less confusion. You will likely feel more privacy and a sense of freedom, as well as feeling safer and more secure. You may also notice a shift in your energy field, as though something that was once piercing it is no longer there.

If someone in the Circle is creating problems and is not contributing ethically or isn’t competent, you may have to make the tough decision to remove them from your Circle. The Circle is for support—not additional distractions or disruptions from meeting your goals. Just as in life, with friends, sometimes we have to sever ties.

Mantras and affirmations can be very powerful in deprogramming your mind from the infiltration of unneeded and unwanted information. Each morning upon waking, and at night before sleeping, say this mantra to yourself, or come up with one that works best for you.

“I will only allow information and frequencies into my mind and body that are for my best and highest good, that will serve my soul and keep me mentally and physically healthy.”

Always remember, you are not alone in this. Form your support Circle, and get to work!

COIN ART

Food for the Soul

By Nina Heyn – Your Culture Scout
Even though practically every major ruler in world history has issued some coinage, just a handful of currencies have gone on to become international standards—used for a long time and widely traded. These include the drachmas of ancient Greece, the Roman Empire’s denari, and a coin called the solidus in the Byzantine empire. Out of the Italian peninsula came Venetian ducats and Florentine florins, currencies that functioned as international standards for centuries. By the 17th century—and thanks to the Dutch East India Company’s success—the guilder (aka gulden) became a dominant reserve currency, to be followed later by the British pound and then the American dollar. While these currencies, at some point, became names for specific trading values, detached from the original coins, the actual coins also became convenient ways of paying for small purchases or amassing as collectibles.

Despite their utilitarian purpose, from the earliest days, coins would often also be works of art. In fact, the older the coins, the more they were artistically varied. Animals were popular on coins of antiquity, which featured all manner of creatures—turtles, lions, eagles, dragons, elephants, snakes, dolphins, octopi, bulls, owls, and even an occasional pegasus—albeit with different symbolism than we have today. For example, Caesar’s silver denarius coin, widely minted to pay the Roman legions, features an elephant and a snake. Some historians have posited that because the elephant was associated with Caesar’s long-time rival (general Pompey the Great), it would have had a negative connotation, while the snake, considered a natural enemy of the elephant, would have symbolized curbing the elephant’s power.
The owl was an attribute of the goddess Athena and, hence, a symbol of wisdom, erudition, and knowledge. It was widely used by the city-state of Athens to signify its coins’ origin and, therefore, the image started to appear on tetradrachm coins from about 510 BC. The tetradrachm shown was issued after the Greeks finally defeated their archenemy, Persia, in 479 BC. This particular silver coin is displayed in a French art museum. It is indeed a charming work of art, with the owl’s dainty turn of the head, huge eyes, and finely detailed feathers. Other drachma owls tend to be less graceful. The obverse of this coin is a head of Athena.

Various versions of the ancient drachma were in circulation for about 1000 years. The Greek word for drachma was derived from the word for “grasp,” and initially the payment token was literally a bunch of six sticks that you could grasp. Eventually this evolved into a coin; a “drachma” (or its multiplier or a fraction) became standard coinage throughout ancient Greece from about 1100 BC onward.
One of Aesop’s fables talks about a nymph from Arcadia called Chelone ("tortoise" in Greek) who refused Zeus’s invitation to a party, preferring to stay at home instead. She soon found out that turning down invitations from gods is perilous, after he sent Hermes to turn her into a sea turtle who always carries her house on her back. The drachma of Aegina island features this mythological tortoise, here in a wonderful relief that makes this piece of silver more of a sculpture than a coin. The reverse bears the name of the island and a dolphin. The earliest Chelone coins are from about 700 BC.

From the time of Julius Caesar, if a ruler managed to stay in power long enough to get new coins designed and minted, his image would soon find its way onto a coin. This is a tradition that continues to this day on numerous coins (especially in countries that still have monarchies). From the point of view of art, imperial heads are less interesting, but there is a compelling exception in the form of a gold solidus bearing a portrait of Empress Irene, an early East Roman empire ruler (see next page).
Irene of Athens was married off in 768 AD to the Byzantine emperor Leo IV. When the emperor died 12 years later, her prospects of survival were not very good. The typical fate of an imperial widow would have been exile, if not outright execution. Instead, Irene managed to become a regent on behalf of her son Constantine VI. She tried to maintain power and peace by improving strained relationships with the pope in Rome and by paying tributes to powerful caliphs of the Abassid kingdom. However, when her son reached adulthood, the power struggle between mother and son erupted in full force.

The coin above comes from the period of Irene's co-regency. She is portrayed as more important than her son since she is holding an imperial orb. After the prince-regent's attempt to conspire against her, she retaliated by having him captured and his eyes gouged, which led to his demise a few days later. Irene became a sole ruler, which is reflected in the solidus coin minted at the end of the 8th century—she is there all alone, holding the attributes of power of a crown with pearl strings, an orb, and a scepter. She is named here as basilissa (empress) rather than as emperor—a sure sign of her power. She was one of three women to wield sole power in the entire history of the Byzantine empire of more than 1000 years.
Irene’s political rise was not acceptable to other monarchical players, however. On Christmas Day of the year 800, pope Leo III crowned Charlemagne the Holy Roman Emperor, thus creating several hundred years of schism that only ended with Constantinople’s fall to the Ottomans in 1453. Irene’s spectacularly bad motherhood was not enough to keep her in power. Five years after her son’s demise, patricians from her entourage mounted a successful conspiracy, replaced her with a man who had previously been a minister of finance, and exiled her to the island of Lesbos to spin wool. Irene died a year later—wool spinning being apparently more dangerous than ruling the entire empire.
Ancient Romans used the denarius, an almost pure silver coin introduced in 211 BC that steadily lost its silver content and value for several hundred years. Roman legionnaires during Julius Caesar’s time were paid an annual salary of 225 denarii. The biblical “tribute penny,” a coin held up by Jesus in the passage about “rendering unto Caesar,” is believed to have been a denarius minted during the reign of emperor Tyberius. The coin above, from the period of Marcus Sergius Silus—a general celebrated for his bravery during the second Punic War—features two significant images. The head is a stylized Roma as a goddess—the symbol of the Roman center of power. The tail side shows a soldier with a sword and a head of a barbarian he has just slain. In other words, the coin is both a currency and propaganda for the dominant political and military might.
The Italian peninsula is also the land of origin of two very enduring currencies: the florin and the ducat. The Florentine gold florin kept being struck from 1252 to 1533 without major design changes. One side features the symbol of Florence—a *fleur-de-lys*—while the obverse has an image of John the Baptist, who is raising his hand in benediction and holding a cross-tipped scepter.

Artistically, this is not the most interesting design, but it speaks of the enduring power of this currency, which during the Renaissance was minted by 150 different states and mints. The particular coin shown comes from a hoard discovered in 1985 in the small Polish town of Środa. In the 14th century, a Jewish banker lent money to the Czech king Karel IV, and this hoard was a security against the loan. The treasure of gold florins, a bejeweled wedding crown, and some rings were buried hastily when the banker was fleeing an oncoming plague. He was never able to return and retrieve the treasure.
The Italian word “florin” began to denominate any gold coin. In northern countries, a similar trend took the form of the “gulden” or guilder, the Dutch gold coin that served as currency in the Netherlands and its colonies from the 17th century until the introduction of the euro in 2002. Guilders eventually became smaller denomination coins, while the most valuable Dutch gold coin was a ducat.
When the Dutch colonial governor Peter Minuit purchased, in 1626, the island of Manhattan from the native tribes living there, he paid them in trinkets worth about 24 dollars (the equivalent of about $1000 in today's money). A member of the Dutch West India Company, Pieter Schagen, reported this great deal to his superiors: "The island of Manhattes (was purchased) from the Indians for the value of 60 guilders." Minuit did not fare very well as a governor, dismissed a few years later for some unspecified transgressions. He then worked for the Swedes, trying to set up a colony of New Sweden, but his efforts came to a halt when he drowned in a hurricane near St. Kitts.
Speaking of shipwrecks, the gold ducat coin above comes from a famous Dutch East India Company shipwreck. In 1735, the Dutch merchant ship 't Vliegend Hert (“the Flying Deer”) departed the Netherlands for the colony of Batavia (present-day Jakarta), but it only made it as far as the territorial waters of the current Belgium. When it sank during a storm, it went down with a cargo of gin, iron, gunpowder, and a coffer of 2000 gold ducats and 5000 silver reales. There may have been much more on board, but this is what was recovered in 1985.

The gold ducat from this sunken treasure is a Dutch version of the Venetian ducat. When the Dutch Republic started minting them, they adapted a Venetian’s ducat design of St. Mark into an image of a knight who holds seven arrows representing seven united provinces of the republic, surrounded by the motto Concordia Res Parvae Crescunt (“by concord small things increase”).
The ducat became one of the most stable and widespread currencies of Europe. From the 15th century until well into the 20th, the gold ducats were struck in many parts of the continent, particularly in parts of the Austrian-Hungarian empire. The coin above is an example of a Czech gold ducat from 1934 commemorating Slovakian gold mines in the Kremnica Mountains. This mine and its mint entered into operation in the 9th century, and by the 14th century, they were minting these Kremnica gold ducats. The gold deposits in the mine dwindled with time, but the mine was reopened in the 1930s (and closed again in 1970), and this coin was struck to celebrate the reopening. It is very rare (only a few hundred exist), and it features an Art Deco-style design of the working miners. The obverse features St. Catherine praying and the name of the Kremnica mine.
Five-pound coin "Una and the Lion," England (1839)
Photo: Wikimedia Commons
With the colonial might of the British empire, England had one of the most reliable currencies—the British pound—which has the honor of being the oldest continuing currency. Already in the year AD 980, you could buy 15 cows for a pound. There has clearly been some inflation since…. To commemorate the 1837 start of Queen Victoria’s reign, a chief engraver of the British Royal Mint named William Wyon designed one of the most beautiful and unique British coins—the “Una and the Lion” gold 5-pound coin. He also designed numerous medals and stamp dies (the famous Penny Black stamp is based on his engraving), as well as his very familiar design of the young Queen Victoria’s head that graced all the pennies and other coins. He began engraving her image when Victoria was 13 years old. The name “Una and the Lion” refers to the queen as Lady Una, a character from Edward Spenser’s *The Faerie Queen*. Victorian England was very much in love with medieval and Renaissance literature, symbolism, and art style. The marriage of this poem from the 1590s with the neoclassical design resulted in this unconventional coin—unusual because royals were not typically portrayed as fictional characters. The lion that Victoria is guiding with her scepter is a symbol of England. The obverse of this coin has the traditional image of the monarch’s head, but the lion design is what makes this coin a unique and collectible work of art. A collector’s item from the start, the original 5-pound coin was auctioned in 2017 for 340,000 pounds. The Royal Mint reissued it in 2019 with the image of Queen Elizabeth II.

Coins have always been used to give witness to historic changes and to date events. Some coins can also give us a glimpse into the artistic style of the era or provide visual symbolism of past cultures.

Part I: Top Ten Stories

Economy & Financial Markets, Precious Metals, and Currencies; and Geopolitics.

ECONOMY & FINANCIAL MARKETS, PRECIOUS METALS, AND CURRENCIES

Story #1: The Going Direct Reset: A Monetary Event Completes the Financial Coup d’État

With FASAB 56 and the August 2019 “Going Direct” decision having paved the way, central bankers seem intent on taking over the Treasury function in debt-entrapped and central-bank-dependent Western democracies, placing themselves in the driver’s seat of both monetary and fiscal policy. Along the way, we are witnessing destruction of many of the economy’s productive elements and a global disaster capitalism shopping spree the likes of which we have never seen before—a war by the contingent that can print money on those who earn money. This is why it’s so important to direct your pushback at the central bankers, and not just at national governments that are merely the “football” in the game.

Story #2: The Going Direct Reset: Central Bank Digital Control Requires the Installation of a Smart Grid—from Satellites to 5G to Brain-Machine Interface

The “pandemic” provided the pretext for a dramatically accelerated smart grid rollout—including more satellite launches, stepped-up deployment of 5G ground infrastructure, and mass human injection of “operating systems” and “plug-and-play apps.” These technologies seem intended to usher in a Chinese-style social credit system, vaccine “passports,” and CBDCs (which, despite their nomenclature, are not currencies)—tools aimed at eliminating individual sovereignty and controlling people right down to their thoughts and behavior. Judging by the number of states proposing or passing nullification laws and anti-vaccine-passport legislation (and creating bullion depositories), at least some governors and state legislators seem to understand that central bankers’ hostile takeover of citizens threatens state sovereignty.
Story #3: Engineering Deflation: From Interest Rates to Inflation to Planet Equity with Central-Bank-Driven Monetary, Fiscal, and Health Care Policies

The financial headwinds that come from ubiquitous mind control and the deflationary destruction of Main Street have steered endless “free money” through the hands of central bankers into private equity and hedge fund firms. The financial arbitrage between those who can borrow at 0% and those forced to borrow at 16%-17% has widened the chasm between the wealthy (who often think things are great because stock portfolios are up) and farmers, truckers, tradesmen, and others who perform concrete functions. Contrary to the apprehensions of those fearing a crash, volatility is part of the Reset (even more money can be made with pump-and-dump). CBDCs would take all of this many steps further—though Fed Chairman Powell has politely suggested that the Fed will not proceed with CBDCs until it obtains “authorizing legislation.”

Story #4: Going Direct Disaster Capitalism: The Drive for Real Estate on Earth and in Space

The U.S. market saw about 480 initial public offerings (IPOs) in 2020. Setting a new precedent, more than half were Special Purpose Acquisition Companies (SPACs)—“blank check” companies that raise capital through IPOs for the purpose of acquiring existing companies. In the post-FASAB 56 era, SPACs can be viewed as a tool to conveniently bypass Securities and Exchange Commission (SEC) oversight and the transparency that should ordinarily characterize an IPO. SPACs also raise other provocative questions. Are SPACs a tool for steering more “missing money” (for example, from DOD) into space-related companies? As of the end of Q1, the trading volume for SPACs was almost one trillion dollars.
Story #5: Here Come Central Bank Digital Currencies

The power and reach of the people who own or direct the central banks should not be underestimated, nor should the “Iron Bank’s” low tolerance for outliers and dissenters. Consider the fishy deaths of African leaders who dared to critique the Covid narrative—such as Tanzania’s President Magufuli—or the fact that 18 countries that tried to suspend the AstraZeneca Covid injection almost immediately reinstated it. Other indicators of this power are the racketeering-like behavior of Pfizer’s CEO and (now-ousted) Israeli prime minister Netanyahu, and the increased allocation of Special Drawing Rights (SDRs) to the International Monetary Fund (IMF) to corral countries into digital control system obedience. In the cultural domain, we also see language weaponized to shore up the official reality. To wit: digital currencies named after the chamber in an underground mausoleum; CBDCs that are not “currencies” but a credit at the company store; and a revised Merriam-Webster definition that says “vaccines” are tools to genetically modify human beings.

Story #6: Beware Taxation without Representation

In the G7 nations, the taxes we pay are financing our own and our children’s destruction—whether via injections or synthetic food or global spraying or public schools that indoctrinate. It is incumbent on taxpayers to find a way to assert lawful rather than criminal management of tax flows. The central bank financial coup d’etat is bringing the “taxation without representation” question even more to the forefront. Ultimately, central banks serve no purpose other than to keep the hidden system of finance secret. We don’t need them—but they need us.

Story #7: A Global LBO (Leveraged Buyout): G7 Central Banks Assert Control of Treasuries and Election Processes

Pieces of the Going Direct Reset are being prototyped and assembled on many different fronts and by many different players—whether in the cryptocurrency markets, the fintech sector, the military, big pharma, or the burgeoning synthetic food industry. The challenge is that very few people can see the complete picture that unites these strands, and it looks like the central banks hope to “throw their trap” before people figure it out. On an encouraging note, tens of millions of Americans know or believe there was election fraud, and a substantial segment of the population will have nothing to do with the injection fraud.
GEOPOLITICS

Story #8: Is the U.S. Military National Security Global Umbrella Being Globalized and Privatized? Ditto Taxation?

Considering the lies, high-tech mind control, poisoning, and injections prevailing in the U.S., it looks like the destruction of America has Mr. Global’s full support. The quarter provided many examples of an alarming deterioration in the quality of U.S. “line management”—even rising to the level of the presidency—that illustrates the replacement of the competent in favor of a kickback-receptive crowd that has global rather than American loyalties. Given that at least half of Biden’s cabinet members are individuals alleged to be dual U.S.-Israeli citizens, it is noteworthy that the U.S. just integrated cyberwarfare “cowboy” Israel into the CENTCOM (Central Command) structure—the branch of the U.S. military responsible for Northeast Africa, the Middle East, and Central and South Asia. Several dozen congressmen also lobbied to transfer the U.S. nuclear launch codes into the hands of a secret committee rather than the President. People who think it sounds like a good idea to let a private group (think central bankers) be in charge should remember that it was only JFK’s control of the codes that prevented the Cuban Missile Crisis from escalating into a nuclear war. The European leadership may be seeing the “handwriting on the wall” in terms of the U.S. inability to be a reliable ally: France has announced plans for its largest military maneuvers since World War II, and the UK is increasing its nuclear warhead stockpile.

Story #9: Has the Multipolar Moment Arrived? The Drumbeats of War Grow as Russia, China, and India Break Away

India and other major powers clearly recognize that the U.S. is not “agreement-capable,” and the deals that India has been inking with France and Russia suggest that its days of being a silent partner in America’s Asian geopolitical schemes may be over. Although Mr. Global has used the pandemic to try and get India’s 1.4 billion people under central digital control, it is questionable whether India wants its population controlled by the Fed. Initially, India’s strong internal medical and pharmaceutical capacity looked like a bulwark against the rollout of Mr. Global’s Covid injections—until an estimated 20 doctors per day suddenly began dying of “Covid” (shades of what happened to Tanzanian president Magufuli?). On the other hand, two (or more) can play at the covert warfare game.

Story #10: ESG, SDGs, and Climate Change: Mr. Global Implements Technocracy through Weaponized Capital Controls

ESG (Environmental Social Governance), SDGs (Sustainable Development Goals), and “climate change” represent more ways to destroy companies with rules and technocracy—weaponized strategies using “standards” and “certificates” to control where people’s capital goes. If people—and especially young people—could be brought to understand how bad totalitarianism and central control are for the economy, we might be able to make some headway. We could have a revolution overnight if everyone voted with their money and transferred credit cards and bank accounts to reputable local banks. In addition to these practical steps, though, people must come to grips spiritually with the reality of evil—and recognize where we are codependent or complicit.
Part II: Top Ten Stories

Culture, Science & Technology, Space, and Food & Health.

“Things fall apart; the center cannot hold;
Mere anarchy is loosed upon the world,
The blood-dimmed tide is loosed, and everywhere
The ceremony of innocence is drowned;
The best lack all conviction, while the worst
Are full of passionate intensity.”

- William Butler Yeats, “The Second Coming”
CULTURE

Story #11: Has the War on God Accelerated?

The Going Direct Reset is not only a monetary event but also a cultural assault on the good, the beautiful, and the true—on the things that ground humanity. Judging by descriptions of people losing their spiritual "spark" after getting a Covid injection, this seems to include going after the "God gene." However, history shows that people can reconnect with morality and spirituality—we are, in fact, hard-wired to do so. If enough of us (even just 5%) take responsibility for our faith—including facing up to the war on God and its demonic and occult underpinnings—we can take protective action and nurture the culture.

Story #12: Is Mr. Global Moving to Establish Private Central Ownership and Control of Education and Children?

The war on God is also a war on the family—and a bid to pull children into a high-tech slavery system. The "pandemic"—whether via online education or contact-tracing-facilitated family separation—brought Mr. Global’s sinister intentions vis-à-vis our children more out into the open. Adults need to recognize the machinery that is manipulating children, especially via smartphones. (Read Solari’s “Mind control tactics used on young people and children” if you want to understand this topic, and read the book Irreversible Damage for a frightening case study of what can happen.) Instead of speculating in Bitcoin or otherwise helping to build our prison, why not invest in a community school or homeschool co-op?

Story #13: The Power of the Field: Is There an Energetic and Artistic Push Around Lockdowns?

There is little doubt that “the Nothing” is on the move (see the movie, The NeverEnding Story). Each of us needs to find a way to instead build “the Something,” including energetically—through prayer and intention—and artistically. Encouragingly, many individuals have doubled down over the past 18 months on “owning the culture,” whether by reading aloud, playing music, listening to more classical music, or creatively disputing the Covid narrative. Classical music (from the 17th and 18th centuries, in particular) is marvelous for restoring coherence and for cultivating the kind of intelligence needed in a complex, multipolar world. Let’s turn the energetic and artistic pushback on the central bankers and see what happens.
SCIENCE & TECHNOLOGY

Story #14: Are Big Tech and Social Media Leading the Engineering of Censorship?

Notwithstanding its positive uses, there is much about the Internet that fosters powerlessness, dampening people’s ability to engage in meaningful learning and to collaborate and successfully “conspire” (or “breathe together”). Now, we face the added challenge of censorship. Perplexingly, few of the people working for Big Tech and social media seem troubled by the unprecedented censorship. Nor do many seem to grasp that these companies—which are fundamentally creatures of the central banks and the intelligence agencies—are laying the train tracks for technocracy.

Story #15: Why Are Injection Makers Trumpeting Installing Operating Systems and Plug & Play Apps in Humans?

The companies manufacturing Covid injections appear quite comfortable openly describing their products as “operating systems.” (For fascinating insights into what these companies are saying and doing, read “The Battle for Humanity” and subsequent articles by David O’Hagan at option3.co.uk.) For anyone who doubts that the leadership’s ambition is to exercise control down to the level of thoughts and behaviors, don’t forget that some of the key players involved in the Covid story are brain-machine interface experts. While the technologies may be new, the playbook for consolidating central control goes back centuries—as the “Plague Laws” chapter of Michael Pye’s The Edge of the World makes evident. Unfortunately, the latest information from doctors and scientists on the injections’ impact on fertility is deeply disturbing. We may be on the verge of an effort to establish central control of the genetics of the children born.
Story #16: Space and Non-Lethal Weapons: What Is the Winner-Take-All Question?

The limited information that we have about activities on the moon, in orbit, in underground bases, and in Antarctica raises more questions than answers about what is happening on this planet and in space. On the one hand, there looks to be major competition between Asia and the G7 nations, but other—possibly unknown—non-state and non-corporate players may also be shaping the space race. At any rate, the money trail suggests that financial harvesting is producing a dividend; the question is, where is the dividend going? And is the debt owned on- or off-planet?

Story #17: SPACS and Space: Are SPACS Just Missing an “E”?

Wall Street typically attaches great importance to acronyms, which makes the one-letter difference between “SPAC” and “SPACE” rather suggestive—as is the space-focused ETF (the ProcureAM Space exchange traded fund) with the ticker symbol UFO. Meanwhile, the average investor still cannot see the relevance of space in the investment arena. I’ve long said that Mr. Global decided to take the money for nursing homes and use it for space. Now, we see significant deaths in nursing homes and space companies going public with what seems to be an infinite pocketbook.
FOOD & HEALTH

Story #18: Is the Roll Up of Farmland and Groceries Accompanied by Growing Synthetic Food Investment?

If data is the new oil, food runs a close second. It is, therefore, unnerving to see the same people who are promoting Covid injections also taking numerous steps to control food supplies, including shutting down restaurants, scarfing up farmland, waging weather and economic warfare on small producers, and making massive investments in synthetic meat and other fake foods. Fortunately, people are getting smarter about bypassing corporate distribution chains in favor of known local producers, and producers are developing innovative models to reach consumers.

Story #19: The Injection Fraud: Is the Shriek-o-Meter Doubling Down on Public Fear? The Nursing Home Killing Fields Terrify

Seeing what has been happening with the rollout of Covid injections, it is difficult not to conclude that Mr. Global is stacking functions. Likely agenda items seem to include: prototyping the installation of an operating system in our bodies (Mark of the Beast); short-term genocide (especially of the elderly); and immune system alteration that could translate into slow-motion genocide (or force recipients into constant updates). Another “benefit” of culling the elderly is that society loses the people with the most institutional memory and historical knowledge. Unfortunately, even with the scale of adverse events that have already occurred, it could well be that “we ain’t seen nothing yet.” Let’s pray that this is not so.

Story #20: The Pandemic Heroes Stand Up to the Great Poisoning and Engineering of Societal Submission

The individuals highlighted as “Solari Pandemic Heroes” in the 2nd Quarter 2020 Wrap Up titled The Injection Fraud—people representing fields such as medicine, science, law, and journalism—made an amazing difference, risking their careers, livelihoods, reputations, and even their lives. Their courage, brilliance, and unequivocal refusal to surrender have saved millions of lives, slowed down the Going Direct Reset, and given us the possibility of a powerful transformation. Let’s take every advantage of the possibilities they have created in the months that lie before us.

**UNANSWERED QUESTIONS**

**Question #1: Mind Control**
How do we keep our minds free of mind control technologies? How do we help others understand that such technologies exist and are manipulating, addicting, and influencing us? What is the relationship between mind control and reducing millions of people to poverty and death through the pandemic? Is this why people cannot see that the pandemic is a governance and monetary event? Are people who are dependent on government subsidies more susceptible to mind control? How do the QAnon op and other fear and hope porn fit in?

**Question #2: Invisible Weaponry**
How important are invisible and secret weaponry and technology to the replacement of global currency systems with crypto control systems?

**Question #3: Invisible Technology**
How are invisible technologies being used to engineer civil wars, turn people against each other, and engage in disaster capitalism?

**Question #4: Missing Money**
Where did Mr. Global invest the $56 trillion (DOD and HUD), the $24 trillion (bailouts), and QE, and where is the Going Direct central bank and fiscal stimulus going? Cui bono Covid-19? How does this relate to the financing and reinvestment of the hedge funds, private equity firms, SPACs, and corporate buybacks?

**Question #5: Reality TV & Paid Protesters**
Who and what do you think the command structure for the Antifa/BLM/Trump armies and related covert operations looks like? How does it relate to reinvestment in real estate and building out of the smart grids? How does it relate to Opportunity Zones? How does it relate to narcotics trafficking gangs and networks? How does it relate to military and intelligence capacity and corporate contractors and mercenaries? How are the patterns similar to the Phoenix Program and Cointelpro? What is the relationship to the DOD and CIA cloud contractors and the fusion centers? How does this relate to the push to create “domestic terrorists”? How does this relate to the push for additional laws and regulation related to mental health and/or guns?

**Question #6: FASAB 56**
How important is FASAB 56 to what is happening? How important is the increased secrecy for the central bank members and shareholders and other major investors? How does this relate to the recent updates on the Missing Money? How does it relate to the cash pouring into SPACs?

**Question #7: Poisoning of Populations**
Why is there a great poisoning underway in multiple areas? Why is there an ongoing global program to increase the levels of aluminum, other heavy metals, and nanoparticles or nanotechnology in humans? Is the push for Neuralink because humans will be more intelligent accessing AI and easier to control and integrate with robots, or because the elites want and need access to uniquely human intelligence and consciousness?
Question #8: Genocide

The nursing home patterns since March 2020 clearly indicate a genocide is underway. Consequently, we have to ask the question. To what extent are the Covid 19 injections about installing a smart-grid-compatible operating system into our bodies for the Going Direct Reset and related surveillance, mind control, and travel control, versus depopulation through lowered life expectancies or controlled fertility or infertility? If biotech companies own the patent on modified DNA resulting from an injection, will they then own us and/or our children?

Question #9: High-Tech Risks

What are the extreme risks generated by new technology: mRNA gene therapy, high-tech fires, the push for immortality, DNA editing, 5G+ mind control and assassinations, and the interbreeding of humans with other species? What else? What should we do to learn more about weather warfare, interdimensionality, time travel, and geophysical risks? Could we get an Operation Blue Beam in 2021? Do we have the capacity to create our own telepathic portals for global “travel”?

Question #10: China & the Quad

Will India start a war with Pakistan? When will China invade Taiwan? Will the U.S. and China go to war, or separate the Internet and financial markets? Are China and the U.S. pitted in a win-lose position in the orbital platform and space race? What about Russia? How far might other countries’ conquests go once it becomes clear the U.S. will no longer play global cop? What is the emergence of the Quad?

Question #11: Reengineering of U.S. Government

How will the U.S. government and central bank be reengineered after FASAB 56, the 2020 ops and elections, and after the JEDI contract is in place? Is the Plunge Protection Team being reengineered or privatized? How critical is the use of major clouds for economic warfare to the takeover of business and market share by private equity firms?

Question #12: Land & Real Estate

What will happen to land and real estate as a result of changes underway? What about the existing energy model? Will energy delivered by wireless technology at low cost be implemented soon?

Question #13: Mr. Global

What is the governance structure on Planet Earth, and what are the risk issues that are driving Mr. Global’s actions?

Question #14: High Strangeness

Which is stranger—what is going on behind the veil of secrecy, or the overwhelming effort to pretend it is not going on and to create an official reality diverging steadily from reality?

Question #15: Demonic Intelligence

Given the tsunami of occult and demonic practices and symbols, how concerned should we be about the interaction between AI and interdimensional intelligence?
Question #16: The War on the Divine
Who is burning the churches of France and why? Why is there an attack on Christianity in many parts of the world? Should we be concerned that the depopulation efforts are focused on Christians? Does this explain the real targeting of communities with a high percentage of Christians? Does this explain the effort to shut down and bankrupt churches or get them financially dependent on government?

Question #17: Education
Is moving education online using Covid-19 a step to privatization and a corporate takeover of education?

Question #18: Historical Plague Laws
What is Mr. Global going to do next with the Covid-19 pandemic? There appears to be a 100-year cycle of plagues and plague laws used to centralize capital. Is it tied to currency or other cycles?

Question #19: Down Under
Why have the Australian and New Zealand lockdowns been so brutal? What does it have to do with Pine Gap and Antarctica?

Question #20: AI & Machine Enforcement
When are robotics and automation going to go up the $ curve? Will the “defund the police” movement turn out to be an install robot and drone police wave?

Question #21: The Climate Change Op
Can the “Covid-19” to “Climate Change” bait and switch really work? Why has Biden appointed a climate change czar who has the carbon footprint of a Panzer division?

Question #22: Sun Cycles
What is happening to the sun? Are we entering into a period of diminished sun spot activity? What would that mean for our weather and economy? Are we at risk of a new ice age? Why is Gates talking about blotting out the sun? Is the risk of a coronal mass ejection (CME) real?

Question #23: Geophysical Risks
Does Earth have a “Three-Body Problem”? Why is there a pattern of civilization destruction 10,000 years ago?

Question #24: The Vision Thing
What are the supporting facts and arguments for optimism?

Question #25: The Road Ahead
What is most on the minds of members of Giza Death Star and Solari Report subscribers? What can we do this year to help improve the learning speeds in our shared intelligence networks?

We believe in doing what we can to support those around us who make a difference in this world or can do with a helping hand. We are here today because others did the same for us. We hope our list inspires you to help others, whether it is a prayer, a kind word, or a donation. If you are looking for great people and projects to support, we hope this list acquaints you with opportunities worthy of your generosity.

Take Action Crowdfund

The Take Action Crowdfund was launched in May 2020 to encourage our subscribers and audience to directly support lobbying, litigation, and legislative efforts to prevent encroachment on our financial and health freedoms and to support related independent media. For those who prefer not to support these groups directly, we offered to collect contributions and allocate them to the recipients.

We focused the bulk of donations in the 1st Quarter on the Farm-to-Consumer Legal Defense Fund. The following is our list of other donation recipients recommended during the first quarter. Thank you for your support of these groups. You are making a major difference.

- Take Action Crowdfund
- Farm-to-Consumer Legal Defense Fund
- Children’s Health Defense-Europe
- Children’s Health Defense-U.S.
- Planet Lockdown, the documentary
- Ohio Stands Up!
- Dr. Reiner Fuellmich and German Corona Investigation Committee
- Celia Farber
- Autism Action Network
- Constitutional Rights Centre
- Joshua James (veteran)
- Tprod Hold-Up documentary
Recurring Donations

Solari is signed up to regularly donate to support people we think are doing great work.

- Growing Power
- OTEPIC Kenya Peace Project: Responding to Crisis
- Truthstream Media by Aaron and Melissa Dykes
- Hermitix
- Really Graceful
- You can help: News From Underground (Mark Crispin Miller)
- Christ Our Hope Prison Bible Ministry
- General Assembly Church
- Foundation for Future Science (Passion for Making a Difference)
- Vaccine Exemptions in the United States: Alan Phillips, JD
- Charles Hugh Smith: Of Two Minds
- Institute for Responsible Technology
- Wikimedia
- Student Loan Justice
- The Urban Homestead
- Newsbud: Where media integrity matters

Non-Recurring Donations

Wait! There’s more… because Catherine prefers investing in people rather than crypto.

- Every official UK Covid death to be investigated: Dr. Clare Craig launches the Covid Deaths Audit

- “Food Not Bombs” Organization
- America’s Frontline Doctors Summit
- Gab Dissenter
- Support Corey’s Digs investigative reports and library of resources
- Esoteric & Astrological Science, Art & Research Institute
- Planet Lockdown film donation fund

“I think people forget that it doesn’t take a big donation to help someone, just a lot of little donations.”

~ Hannah Teter
The 1st Quarter of 2021 began with fireworks at midnight over the lake at Interlaken in the Jungfrau in the Swiss Alps with Thomas Meyer and Orsolya Győrffy and their friends and family. The mountains were covered with fresh snow and the surrounding chalets twinkled in the moonlight. It was an auspicious beginning for a busy new year.

The 1st Quarter of 2021 ended with scenes of hundreds of joyous ice skaters in Stavoren, Netherlands as a March cold front froze the water in the canals and port. Hundreds of skaters took to the ice to exorcise the heavy spirit of the lockdown restrictions and to celebrate the return of skating conditions on the North Sea.

The feeling of newness pervaded the time. A new year, with new friends appearing daily and a new impulse for freedom.

Once I returned to the Netherlands from Switzerland in early January, there was no traveling for me for the rest of the quarter. It is unusual for me to remain stationary for this long. However, the beauty of where I live in the Netherlands makes it easy to do—as does the ever-growing pile of books decorating my small apartment overlooking the IJsselmeer, the enormous closed-off inland bay bordering Friesland’s southern border.

The first quarter is typically a busy time—a time of attending to accounting, taxes, and regulatory responsibilities. This 1st Quarter of 2021 was also defined by the growing number of people committed to human rights organizing and to researching and determining what is going on in the world and what to do about it.

This was accompanied by new subscribers joining The Solari Report, looking to understand what was happening. We are exceptionally grateful for this growth, as it is funding a long list of efforts to improve our offerings, upgrade our systems, and support and continue to build out our capacity in both the United States and Europe. This includes the tools offered in this 1st Quarter 2021 Wrap Up.

Accept the things to which fate binds you, and love the people with whom fate brings you together, but do so with all your heart.

— Marcus Aurelius
With growth comes more time invested in networking and working with subscribers and allies. As was the case last year, the people who offered us the greatest assistance were many scientists and doctors, possessing knowledge of science, medicine, technology, and related legal and regulatory areas—as well as on-the-ground experience in their various fields.

Whatever our backgrounds and fields, throughout the 1st Quarter we were focused on the impulse for freedom and how to convert the “Going Direct Reset” into a people’s reset that serves the best and highest interests of all concerned.

For all the positive developments in the 1st Quarter, it is clear that we are enduring multiple waves of health care and medical tyranny, accompanied by ever greater volumes of disinformation and distraction furnished by the “shriek-o-meter.” Unfortunately, I expect a tsunami of tyranny and disinformation in the fall. It is a time to live in your purpose and “turtle forth,” come what may.

The Solari team and I have many people to thank for making the Solari Report great in the 1st Quarter 2021.
Vanessa Biard-Schaeffer
In 2021, Vanessa continued her quarterly Solari series, Via Europa, covering European politics and culture and connecting trends in Europe and the United States.

Robert Dupper
Robert is Solari's videographer, graphics guru, creative inspiration, and anchor in the Netherlands and the managing partner of Solari Europa.

Brad Eddins
Brad is Solari's News Trends & Stories Wrap Up editor and does a yeoman's job preparing that section of the Wrap Ups. Brad also manages the Take Action section at solari.com.

Bronwen Evans
Bronwen provides us with a much-needed eye on Southeast Asia that reflects extensive experience in global journalism, business and finance, and building local ecosystems.

Dr. Joseph P. Farrell
Joseph joins us for our quarterly News Trends & Stories analysis. There is simply nothing else like it. It was Joseph who persuaded me to expand our coverage of culture. It has made a life-giving difference. We also gather essential insights weekly from Joseph's work at Giza Death Star.

Ulrike Granögger
Ulrike has been shifting our paradigms with the latest revelations in spiritual practice and science in her incredible workshops and the Solari Future Science Series.

Matt Hale
Attorney Matt Hale has been helping me with questions in Ask Catherine as the technocratic thicket of laws and regulations grows and provided us with Special Solari Reports, including a two-part warning on the risks associated with U.S. jury trials by Zoom.

Nina Heyn
Nina continues to delight us with her Food for the Soul columns as she sleuths out great art, great museums, and great movies. Nina is now back on the road, beginning with a series and podcast on New York museums.

Pete Kennedy
As the host of the Solari Food Series, attorney Pete Kennedy has been helping us understand and support the farmers, legislators, and litigators who are protecting our right to grow and market fresh local food.

Najat Madry
Najat has now assumed leadership of our #CashFriday campaign. Will the world ever be the same?

Thomas Meyer and Orsolya
Thomas grasped my interest in Rudolf Steiner and my passion for the Story of Gideon and Chartres and has been educating and inspiring me about them ever since.

Brigitte Mouchet
Brigitte inspires and educates us to maintain our strength and vitality in the Solari Wellness Series and assists us with our weekly content as writer, editor, and purveyor of good taste!

Rambus
Rambus provides truly the best technical analysis anywhere for our quarterly Equity Overviews.
Jon Rappoport

Jon Rappoport’s decades of research and writing on health care and the use of the medical cartel to engineer central control have made it possible for us to “jump the curve” on pandemic propaganda. Jon joined me in March for an update on our “Coming Clean” series in anticipation of the 1st Quarter theme, *Take Action.*

Dr. Mark Skidmore

Mark continues his efforts to research the missing money and joined me on The Solari Report for an update on the money that continues to go missing from the U.S. government—it is some of the most original, fearless scholarship on the planet.

John Titus

John is now co-hosting our weekly *Money & Markets.* This was John’s first full quarter doing so. I now have fun doing *Money & Markets.* Imagine that! John’s legal skills combined with his years of research into Fed policies and operations bring welcome capacity to our weekly review of what is going on in both the economy and geopolitics.

Jason Worth

Jason continued to provide highly capable insights on the financial markets and economy.

Most of all, the thanks of the entire Solari team go to our subscribers. You are one of the most remarkable networks of people on the planet today. Each day, you inspire us with the confidence that our vision for a human future is unfolding before our very eyes. You put the gas in our tank and provide the ideas, corrections, suggestions, questions, and inspiration that make The Solari Report go.

On behalf of the entire Solari team, I wish you the joys of possibility and accomplishment as we move forward, making the very most of the times. We hope our efforts to support you in taking action have been useful. Keep letting us know how we can help you organize and take action. The way we decentralize political and economic power is one person and one Solari Circle at a time.

How can we support you taking back your power in 2021? This is what we intend to do.

This is why I am doing The Solari Report.”

~Catherine Austin Fitts
Subscribe to The Solari Report

Knowledge is more than power. It’s also independence.

Catherine and the Solari Report team want you to have both. You get a source of actionable intelligence that can help you recognize risks and opportunities. But you also get a cold, hard, and useful look at the global political and financial systems.

Catherine Austin Fitts was a Wall Street and Washington insider in the ‘80s and ‘90s when globalization and corruption took over at the expense of local economies and people.

Catherine fought and then bypassed the system and now advises her subscribers and investors on how to navigate the risks in today’s economy.

The Solari Report publishes weekly Money & Markets briefings on current political and economic events by Catherine (36 a year) as well as weekly presentations and interviews with special guests chosen for their expertise and integrity (52 a year) in a wide variety of areas that impact subscribers’ health and wealth.

Each interview is published as an audio with a commentary and video excerpt, followed by a written transcript. Additional special reports and alerts take place several times a year.

Annual and Quarterly Wrap Ups that summarize the top news, trends, and stories, provide a rich selection of financial market charts, and in-depth analysis of the most important trends impacting the economy. With Solari Report Wrap Ups, you are on top of the news with very little of your precious time.

Exclusive access to an online area of our website (Solari.com) which provides you with our library of Solari Reports published since 2008.

Weekly email updates announcing the next Solari Report along with top picks from Solari.com and information about our luncheons and other events as Catherine travels.

Access to a Subscriber Portal and subscriber-only articles that allows you to post comments and questions to Catherine. Top questions are answered on Catherine’s weekly briefing.

Many subscription services focus on a single topic such as investments, precious metals, health, or politics. The Solari Report provides commentary and analysis on all areas that impact your time, your health, and your wealth as well as those that impact your responsibilities as a family and community member and citizen and taxpayer.

We want you to live a free and inspired life—so we seek to integrate all aspects of the world around us that impact you.
“As it takes 150 years for a copper beech tree to mature, plant today because there is no time to waste.”

~ James E. Hughes, Jr., Esq.
