The Solari Report

September 16, 2021

The Global Landscape on Vaccine ID Passports with Corey Lynn

Summary: In this interview, I'm joined again by Corey Lynn of *Corey's Digs* to discuss the latest developments regarding this most important topic of vaccine ID passports.

As background for this interview, I recommend Corey's blockbuster series **[Global Landscape on Vaccine ID Passports Series, Parts 1-4](#)**. Solari sponsored this investigative reporting to make it easier to see the bigger picture on how plague laws are being used to reengineer a new control grid and financial transaction system.

This is a landmark, blockbuster report. You don't want to miss it. Corey and I also discuss the efforts being made to stop central digital control, and solutions to build the kind of world we want to live in.

This is a 4-part series that breaks down OUR FUTURE if we don't put a hard stop to it. Solutions are listed in both parts 3 & 4. This isn't about a "vaccine ID passport" for those behind rolling this out; it is about having a Digital ID for the entirety of our future via a QR code that will link to the Blockchain, containing all of our data from vaccines, health records, education, driver's license, bank account, financial assets, loans, auto, shopping habits and spending, criminal records, housing, and travel. It is to track and trace our every move, which will ultimately be linked to the "Smart Grid" where every other product will be tied into. This is why they want every person to be plugged into the internet and have a smartphone in hand. The goal is to roll a central bank digital currency (CBDC) into this to control finances via their new ESG and social scoring systems they have already begun implementing. The QR code and biometrics will be utilized across the board, on every street corner, everywhere you go in their dystopian fantasy, IF WE ALLOW IT. Understand who the key implementers are, all of the agendas at play, and a rough timeline of where they are at with all of this, so you can stay ahead of the game and do what it takes to derail their agenda.

Interview

Catherine Austin Fitts: Ladies and gentlemen, welcome to *The Solari Report*. It is a great privilege to welcome back Corey Lynn of Corey Diggs. If you’re not signed up and supporting Corey Diggs, you need to go there right now and do that.

Corey has added a great deal of incredible intelligence to our network this year. First, I want to thank her, but then I want to introduce her.

I said to her late spring, “Corey, we need a serious series on vaccine passports. Would you do it?”

We need to deep-dive the detail if we are going to figure out how they will dovetail with the financial system, but there is much happening and many people trying to compete into that space. So, it’s complex; it’s complex, and the technology is complicated.

She did it, and – wow - it’s a four-part series. It’s on *Solari Report*. She joins us today to walk us through what the passports are, what is happening, how we stop it, why it’s so important to stop it, and it’s all part of the control grid. This is a very big, important piece. There is software that is going to be used to control everything down to your bank account.

Corey, thank you for joining us on *The Solari Report*, and thank you for the incredible job you did on this series.

Corey Lynn: You ‘bet’! I’ve learned plenty along the way.

Fitts: I am sure you have! I have this image of you with big Post-It notes all over the walls, surrounded by lists and organizational charts.

Lynn: And Whiteboards and white paper. Yes, it was quite ‘crazy’.

Fitts: That’s what it takes to map this out. I’ll never forget being on Wall Street and saying to one of my associates, “I want you to completely memorize and learn this one section of the IRS code.”

I went back, and his entire office walls were covered with Post-It notes with tiny handwritten notes. He had literally mapped out the whole thing in an organizational chart in writing. It was incredible.

Lynn: That’s awesome!

Fitts: The thing is: Once you read it, you understood it.

Let's dive in. I asked you to write this series, so you began. There are four parts. Talk about where you started and what you thought about vaccine passports or vaccine ID passports when it started.

Lynn: I knew where they were headed. I knew the Going Direct and the Great Reset all tied together. I knew that they had been pushing for these digital identities, and they were utilizing the QR code for the vaccine ID passports. I started digging into that and immediately saw the connection to blockchain. But everyone has been talking about this 'great reset' for so long. I hadn't seen a solid breakdown of the operation and the players and how many different agendas are tied together; this is global.

Fitts: This is a real tremendous integration across many industries.

Lynn: Yes, and in this report alone, I talk about over 285 organizations and people involved. That's not even all of them, but we have nearly all of the 'top dogs' in there.

The infrastructure is there. I wanted to see at what stage they were with each part of this to gauge how much time we have to fight this and how quickly this is going to evolve through the banking system because we know that it is headed there as well.

The infrastructure there is all in place. They have the technology, they know what they're doing, and they know where they are going with this. But to integrate it throughout each country and then internationally, that is a work in progress.

Fitts: It's a big job.

One of the things that you did in *Part I* – and this on the screenshare on *The Solari Report* (all visuals are on *The Solari* website) – is looked into states that had fully or partially banned vaccine passports. What you found was that there are many 'loopholes in the Swiss cheese' on this one.

Lynn: Yes, and right out of the gate, I wanted to get an idea of where all the states stood on this, at least in the US. I touched on a handful of other countries as well, some of which are quite a bit ahead of us on this. It was interesting because at that time, at the end of June, there were only three states (Florida, Alabama, and Montana) that did a statewide ban. That was across institutions and schools and corporations and state offices. That was rather impressive. I was happy to see that.

Then as I started ‘rolling’ through the other states, I found partial bans where they weren’t going to allow any state or local governments to demand it upon access to any of their buildings, but they weren’t going to try to control individual businesses. That was interesting to see that breakdown. We definitely need more fighting on that front, especially after Biden’s speech recently.

Fitts: When you wrote *Part I*, I heard from many people who I discussed this with was that they couldn’t fathom where these people were going.

I remember looking at one passport app from Spain, and they had it set up to check the box if you had the first of all eight injections.

If you look at the contracts they were putting out in 2020; they were putting out contracts so that every American could get one a month. They were building capacity for many. This was not just two weeks to flatten a curve or have two shots; this was regular and constant shots.

This was a ‘treadmill’.

Lynn: We knew they would keep going with this and that it wouldn’t become a ‘one-off thing’. They were going to say that we needed it seasonally or every year. Of course, now they are bringing in the boosters, and now they have Pfizer working on the anti-viral pills that you have to take with the jabs. It’s never-ending.

Fitts: It’s an unending business model.

One of the ways that the passports are being sold is that this protects your privacy. It’s not an ID system; it protects your privacy. Of course, this is a ‘huge

bunch of hooley'. It's very clever the way they are selling this.

Another way that they are selling it is, "You don't have to get the injection; you can also take a test." But it's not hard to fathom that once they have the entire control grid in place, wham – they can shut it down.

When you finished *Part I*, what had changed in your view of this effort of vaccine passports? How did you change between zero and the end of *Part I*?

Lynn: Honestly, I was optimistic. I was surprised to see so many states stepping up, even if it was just a partial ban. The fact that they were putting any kind of a ban on it made me optimistic in saying, "We could potentially get more legislators behind us here. If we can ban these, that is the first step. We have to stop these so that it doesn't continue through this whole rollout."

The digital identity is not about virus at all.

Fitts: Right, it's about total control.

Lynn: Yes, they are using that as the mechanism to get everyone into the system.

Fitts: I always tell people, "Don't worry about the CBDCs; this locked you down into the whole system long before. Worry about the passports."

One of the things that you realized right away in this series was that we needed things that people could do – positive action. The three that you had in *Part I* were: 1) Cash Friday, 2) Shift into well-managed community banks and credit unions. So whether it's cash or smaller community banks, decentralize your money and your bank deposits. 3) Educate your local and state representatives. The state representatives can't say no unless they have real support from the 'troops'. So those were three great suggestions.

The next thing that happened was we went to *Part II*. Tell us about how you decided what you were going to do with *Part II*.

Lynn: I remember emailing you about this. As I was starting to map this out,

the more research I was gathering, I thought, “My God, this is a beast! I think I need to preface it with who, what, when, where, why, and how so that people understand who really is involved in this.”

Fitts: I had a friend who would say, “Who is doing this?”

So this was the, “Who is doing this?” moment.

Lynn: I thought it was necessary to understand the basics of the agenda and who was behind it before showing the key implementers and how it’s rolling out.

Fitts: I loved this because you and I had all of these incredible conversations, and I would describe you as a ‘killer’ researcher. Your ability to dive in and gather all the complexity and make sense of it is incredible, but you don’t come from the financial system.

It was very interesting for me as a publisher who was behind the scenes cheering you on and enthusiastic about this to read it and have these ‘Here’s how this works, and here’s how this works’ moments. It was like we were doing a jigsaw puzzle. You knew about how all these areas worked, and I knew how these areas worked. We were moving the jigsaw puzzle pieces around while we were trying to map out who’s who.

Lynn: Right, and, of course, everything that I came across with banking, I would ‘shoot it’ over to you and ask, “Do I understand this correctly? This is what I see here.”

Fitts: One of the great things about this article is that it reflects a serious effort at understanding how the different industries – including the financial system – work.

So you finished the who, what, and where. One of the things that you went into was the digital identity effort with ID2020. Could you say a few words about what that is so people understand?

Lynn: I’m going from memory here on the ID2020. It was founded by Bill

Gates, the Rockefeller Foundation, Accenture, and there are two more that I can't remember.

Fitts: You know the Harvard Foundation is somewhere in there; they are everywhere.

Lynn: He funds them to roll out all the papers to justify their actions. I'm drawing a blank because I have over 200 organizations 'in my head'. Ideo is another company involved, but Accenture, Rockefeller, and Gates are the main ones with the ID2020.

They formed this in 2016. They were ahead of the game on this. We already knew that this was coming. Many people had been talking about ID2020 long before COVID even hit. So, this is something they had been working on and wanted to get everyone onto this digital identity. Of course, they always use the poor as an example.

Fitts: They do. They always say, "This will help people who are unbanked to get access, and we are going to help the excluded. This is going to make the world inclusive." They always have those 'sweet songs'.

Lynn: Right, and they say that this is for transparency, and they need to get everyone into a bank account, and how wonderful they are in saving the world.

After COVID hit, they decided they were going to become the 'certifiers'.

Fitts: They get to say whether you're a real person or not. You're not a sovereign individual; you are only a sovereign individual if they say that you are.

Lynn: And they get to determine if the apps being put out meet their 40-point standard. Of course, they are basing that on the one that was 'rolled out' in China, which was the first one that was rolled out. Of course, it used the QR code; they had the different colors that would pop up and show if you were negative or not.

They ultimately became the certifiers. Of course, they are involved in every level of this whole integration.

Fitts: The passport appears to integrate the idea of a global digital ID system. It's totally global, and it is totally centrally controlled. One of the selling points is, "It's going to give you complete privacy." People can confirm 'this or that' about you without compromising your privacy.

Lynn: Because what they are doing is, for one, saying, "The Linux Foundation is building the privacy and security end of this," and everyone feels safe because Linux was open-source. The other thing that they are doing is using the blockchain framework as the platform. Most people who understand blockchain automatically say that it's cryptocurrency, and it's blockchain and is totally decentralized. But they are utilizing the technology in these platforms to centralize much of it.

There is federated, there is centralized, and then there is decentralized. First, anyone who sees the players involved in all of this who would even think for a minute that they're not going to have access to this data, that's 'crazy'.

Fitts: It's what I call the 'databeast'. The databeast has been growing for a long, long time, and it is funded by taxpayer money.

So, you finished *Part II*, and you went through all the 'creepy' ID2020 and who's who. How did you feel at the end of *Part II*?

Lynn: I thought, "My God! How am I going to break this web down with all of these players?"

By now, I had all these categories going across my whiteboard. I thought, "Wait a minute. Who is setting the standards for this?" I was trying to pick it apart and see who was covering what area of this. In some places, obviously, we have multiple technology companies putting out the apps, but many of them are only small players in this – 'small fish'. Then we have the ones setting the standards.

Immediately, I thought, "We know who is probably going to be involved there, and we know the World Economic Forum probably has a whitepaper on this."

Actually, the European Union was utilizing their template with this. So, it just

kept evolving and expanding.

Fitts: It's somewhat like a land rush. You have players all around the world seeing the land rush and all rushing to fill in that space.

So then in *Part III*, you got into the details of the key implementers of the blockchain. I'm scrolling it down on the screen. For this one, you called me. I love this chart with the train tracks and the key implementers. This was where we got into the fact that the people who are the most powerful behind this are the central banks and the large banks and all the money people. If you just look at how this lays out, it is all the 'money guys'.

Walk us through the Key Implementers chart.

Lynn: I broke it down into about seven or eight categories:

Drivers & Enforcers. This is who you called the central banks and the large bank members.

Asset Managers: BlackRock, Vanguard, foundations, and endowments.

Fitts: That is where Harvard and Rockefeller come in.

Lynn: Yes.

Digital Identity Front-Runners. This actually incorporates several countries.

Many countries are ahead of us on this as far as how hardcore they've implemented it and rolled it out, and how many million people they have managed to get on board. So, we have Akamai, Cardano, Commons Project, Entrust, EUCDD, Evernym, IBM, and CETC.

Fitts: I have to mention something 'creepy' because IBM, as we know, has a very creepy history in this. My understanding is that IBM has a significant amount of the smart meter software as well as being the contractor on the census. So, IBM is a major player in the control grid.

Lynn: They are, and it's interesting because when I was digging through all of this, I can tell you that they 'fly under the radar' quite well.

Fitts: The other one who ‘flies under the radar’ – and I don’t know if they are even in here – is AT&T. So obviously, you have the telecom’s playing a big part, and the 5G satellite system makes that even bigger and bigger.

Lynn: Yes, they made it into *Part IV*.

Infrastructure. There are many big players in here.

Fitts: These are the cloud players – the big clouds.

Lynn: You can see all the companies on the chart.

Privacy & Security. The Linux Foundation is working on this.

Cross-Border Regulation Designers. From what I researched, it seems like that part is the biggest hang-up in this, and that will take the longest to connect.

Fitts: Right, it’s cross-border payments. That’s exactly what that is.

Lynn:

Certifiers, Standards & Guidelines.

Instrumental: Deloitte and the Good Health Pass Network, which was also formed by ID2020-everyone who is anyone as a more prominent implementer player in this is part of that network.

A Few Big Funders: Big Gov, Bill Gates, and the Rockefeller Foundation. There are many people funding this, but they repeatedly keep coming up in all sections of this agenda being rolled out.

Fitts: It’s very clever how this is being done. If the central bankers said, “Look, we want complete financial control, and we are going to make the system go all digital, and we are going to roll out a complete control grid. In fact, we are going to use taxpayers’ money to finance a complete electrical control grid where we can control you and all of your money and see everything you are doing and track you directly and have total central control,” everyone would say, “No, we don’t want to be controlled by the guys who brought the financial crisis. We hate you.”

But this whole thing is being marketed as ‘health’.

Lynn: I know! Then you look at the huge infrastructure plan being rolled out, and you start breaking that down. The entire thing is about building out the smart grid. It’s not only people; they want every single product.

Fitts: Right, but, “I can’t turn off your electricity, and I can’t turn off your electric car unless I have you on the grid”.

Lynn: Exactly. And, “I can’t turn down your thermostat unless you have that smart thermostat in your house that I can access remotely”.

This infrastructure plan is all about rolling out the smart grid. Look, they’ve already forecasted that these digital IDs will grow from \$7.6 billion in 2020 up to \$15.8 billion by 2025. It’s a racket. They are making big money through all of this along the way to their complete control.

Fitts: If you study AI, you realize that part of this competition is that the person with the best AI is the person with the best data. In other words, you get the best AI by having the most data to feed the AI. So, part of this is a ‘land rush’ to get the most AI.

If we digitize the atmosphere, the trees, nature, people, and everything, that is how we maximize total digital. They are literally creating a capacity in the databeast to simulate everything.

Lynn: Yes, and they are putting smart packaging into all products. Everything will have an individual IP assigned to it, and it will all be connected into the smart grid. They forecast by next year that AI will generate \$4 trillion in added value for global markets.

Fitts: You finished *Part III*, and this one was a real ‘bear’. It got very, very long because you really had to map out all the players and the big issues like the cross-border issues.

I said to you, “We need to do a list of everybody in alphabetical order so you can find all of your favorite criminal enterprises.” You did, and this is a really

magnificent piece of investigative journalism.

Then you ended with, “It’s time to ‘derail their train’.” I love this picture!

Lynn: Yes, we need to not comply and not utilize these apps or the QR code. We need to stay on top of legislators. It is so important.

Fitts: What they are planning, which Alison McDowell has mapped out very well in some of her things. You see them prototyping systems where somebody is born, and the blockchain is created immediately for them, and all of their data is collected into that blockchain for the rest of their life. There is no privacy and no secrecy. Of course, that means you can collateralize the CBDC currencies with humans. So instead of a gold standard, you just have a human standard; you have a slavery system.

Lynn: The NEC (Japanese info tech company) just completed their wonderful fingerprint biometrics on babies. So, there you go. They want to start tying that in. Instead of utilizing birth certificates, you go straight to biometrics. They anticipate biometrics will reach 95% of all smartphones globally by 2025.

Fitts: I received an email from a subscriber who was talking to another subscriber who was trying to roll over her unemployment compensation from the Federal program. They required her to sign something that said that the private company that was going to have access to her biometric data – because it all works off biometric – was free to sell her biometric data. She had to agree to that to get unemployment.

Lynn: That is another one that I have in here. At ID.me, in 28 states, if you need unemployment, you have to go through ID.me. It involves biometrics and all kinds of good things.

Fitts: The plan to strip people of their earning potential and assets and then get them ‘over a barrel’ with all of these things is quite extraordinary.

You ended *Part III*, and how did you feel? You were going through this really evolving process of learning about this and mapping it out. You were going through real changes as you were doing this.

Lynn: It was quite intense. It was intense to see how far it had already gone. At this point, I didn't put it in here; I put much of it in *Part IV*. I already had a 'slew' of examples in multiple countries of what was already rolled out, and I kept thinking, "My God!"

I thought I had a good view of the overall scope until I started doing this, and then I realized down to every last little product how they are going to try to control us.

Fitts: It's absolutely complete control. Naomi Wolf gave an interview on this very early on, and said, "Vaccine ID passports will be the end of human liberty in the West." I think that is the best summation I've heard so far, and it's coming very fast. That is one of the things that you show. You also show how long they've been working on this.

Lynn: They've been building this up for a while.

Fitts: Then when you started *Part IV*, *Part IV* was somewhat like rounding up all the cattle in the Western states.

Lynn: *Part IV* was the longest piece. I think I capped it out at about 53 or 54 pages on that one.

Fitts: Tell us about *Part IV*.

Lynn: With this one, I wanted to get more into the QR code itself so that people understood how they are integrating this into the blockchain and what they are integrating. There are some rather nefarious things that are going on with it, and I wanted to get into how far they've come with it. Of course, I have a whole section in here on George Church, who is a geneticist.

Fitts: He is a 'piece of work'.

Lynn: I actually did a six-part report on eugenics a few years back. I was talking about how they were taking and collecting people's DNA under the guise of, "Hey, we are going to show you your background, your nationality, and all kinds of wonderful things." You had Ancestry, and 23andMe. There were

many of them.

I personally know people who did it because no one was the wiser. They were thinking, “Oh, this is kind of cool.”

Then I found that some of that information was being sold. Of course, Bill Gates was involved in some of it. So, I was putting in a warning back then.

Now we have evolved. George Church was involved with the Human Genome project. My favorite slide that he puts up lets everyone know, “This is my conflict of interest slide.”

He is tied into Harvard, MIT, government-you name it. They are going to do a movie on him to try to normalize all of this. He owns multiple companies that have to do with DNA collection and study and ‘what not’. He now has it set up to put on the blockchain. They’ve managed to encapsulate the information in a genomic sequence and pack it into a QR code. Now they want to put it on the blockchain. He makes it sound like it’s this wonderful thing because, “Now you can sell your DNA-the genomic sequence-to other scientists who can study it. They can pay you through tokens.”

This is a whole new area that is coming about. It’s not just him, but it’s other companies as well. That is only one area.

We already know that they intend on connecting in your healthcare records, your education, and everything.

Fitts: They want everything. This is the databeast; they want everything.

Lynn: They want your every move – your travel, what you buy, how you spend your money, etc. This all ties into the social score system and the climate scoring system that they are implementing and building out categories into your bank accounts so that they can see exactly where the money is going. They’ve made great strides in all of this.

Fitts: As efforts were made to pass legislation to promote the vaccine passports, you would see the bank stocks go up in order to promote the

vaccination mandates. One very bright scientist pointed out, “They don’t need vaccines. If they just gave everybody saline solutions, that would work fine to get the passports.”

But what you finally did in *Part IV* – and you were gaining on it in *Parts I, II, and III* – is what I’ve always believed, and that is the passports are simply to do what they need for the central bank Going Direct digital control. This is just a control mechanism, and the central banks don’t want to say, “We, the central banks, want you to use this passport because we want to control you,” so they use the bio-warfare to get it done. It’s a marketing strategy to get you to adopt a financial control system.

In *Part IV*, you deep-dive the whole central bank and banking aspect of this. Tell us a little about that.

Lynn: I was looking at two different avenues with the whole banking system and how this might evolve – if that is the area you are talking about right now.

Fitts: Yes.

Lynn: One, I saw how big tech is playing quite a role in this. There is plenty of competition.

Fitts: The bankers and big tech are going ‘head to head’.

Lynn: Yes, and not just with that, but with this whole agenda. There is a lot of competition. It’s not like all of these organizations are lockstep in synch. Many of them are competing against each other. They each want to be the ‘top dog’.

With the banking, I was seeing two different things taking place. With big tech, they were doing things like what PayPal did. They don’t have the FDIC insurance. They are not a ‘bank’ but they could work with a bank and they could provide services that the bank offers and act as a third party for that bank. So, they did some credit cards and some small business loans. I think it was the EOCB that did the whitepaper.

They were breaking it down as well, talking about the ‘big tech’ and how big

tech could actually put a bit of a squeeze on the banks because, “They have all of the data and they know all of our behaviors and our spending.” That is one thing they have that is so powerful. They are already providing the ability to do everything digitally. So, how easy would it be for them to grow that and roll that over and compete with these bigger banks?

At the same time, there is this whole other angle that is occurring where you have states that are wanting to implement government-run banks and potentially use the USPS locations as banking. I’m sure that you could elaborate more on this.

Fitts: One of the challenges is that, to the extent that central bankers do Going Direct, they do need banks of some kind to do the equivalent of customer support and tech support. I assure you that the New York Fed is not going to open a tech support function. So, you need somebody to handle the day-to-day mundane problems of interacting at the retail level.

So they could use the banking system for that, but if they create ‘public banks’, what a great way to destroy the last remnants of any kind of financial freedom and have a completely controlled network. So I am very concerned, and so are many of the community bankers’ associations that are trying to stop this. It would give them a totally controlled capacity that would be the ‘death knell’ to the last things protecting small business.

The health of the small business economy depends totally on that infrastructure of community banks and credit unions.

So you go through all the financial information, and you have now mapped out the ecosystem for vaccine passports and where it stands. You come down to the end of this unbelievable piece. I think the richness of *Part IV* is incredible. You put a list together of everybody who is ‘playing’. When I say that everybody is playing, I mean that all of these players are trying to jump in to get the fees and the margins that are going to get squeezed down. I’m always talking about what I call the ‘Midianite thing’, which is people starting to fight among themselves. I think all these people will end up killing each other trying to fight over the spread.

Lynn: It's quite wild. I thought it would be a little more cohesive, and then as I dug in, I realized that there is a great deal of competition going on here.

Fitts: This looks like the trading floor at Solomon Brothers. It's a mess.

So you come down to essentially the last section, 'Hard Stop: It's Time to Man Up.' I love this.

Lynn: We have not to comply. Many of these 'mandates' are not laws. It's plenty of intimidation, a lot of noise, and people need to stand their ground. They need to fight this.

We see plenty of that. We are, and I'm impressed. I've seen many lawsuits in place, a lot of protests going on, walkouts, people getting their companies to change it from a requirement to a recommendation otherwise, they are going to lose all of their staff, and that is important. We have to keep pushing forward because look at what is happening in Australia.

Fitts: The President made a speech saying, "It's hopeless. There's nothing you can do. Comply."

Lynn: "Trust the science."

Fitts: Rand Paul, who I have to say has done some amazing things since he's been in the Senate, came out and said, "He has no basis in law to do this. He can't do this."

Lynn: But he (Biden) kept repeating through his speech, "I have the authority."

Fitts: No, you don't!

Lynn: It was rather 'crazy'; it was 'cringy'. It's hard listening to him, but it was necessary. I had to hear what he was going to attempt to roll out. Nineteen states stepped up and said, "No, we're not going to agree with you on this one. We are going to fight this."

Fitts: Arizona's AG and Pima County, AZ came out and said, "No mandates. We can't do this. It's not legal."

Lynn: Let's hope that it sticks – not just with the 'jab', but also with the IDs. They go hand in hand. If you can stop the ID, there is no way to prove whether you've had the jab or not.

Fitts: One doctor that I know said that the hospital was checking with the government to see if the people who told them they had been vaccinated really had been. He said, "I'm telling you that the government has a database of each person, the date they were injected, the make of the injection, and the lot number." He said that they have it all.

Lynn: I have no doubt because they have the barcodes on the individual vaccines, I believe. At least early on, they were doing that. Do you remember that? That is when people started coming out saying, "This is the chip."

I said, "No, that's on the outside of the jab itself. It's not the chip yet."

Fitts: Let me bring this up: I think the vaccine passports, in one sense, have nothing to do with the injections; they need that for the financial system, and they need that to build the control grid. To a certain extent, the injections may just be the excuse they use to get it. It's a way of marketing the Going Direct Reset using healthcare instead of finance, but no doubt there is a lot of 'funny business' going on with these injections.

My number one piece of information that I would love to know is: What the 'heck' is in them? We know something about the ingredients, but we don't know 100%. If you look at the patterns worldwide, not everybody is getting the same thing.

We know that batch after batch has turned out to be saline solutions, and the adverse and deaths that I'm getting reports on from rich neighborhoods is totally different than from poor neighborhoods. We've had researchers who get files and do analysis, and they are seeing 'wildly' diverse contents.

In Japan, they came up with Moderna shots, and several of the reports were that

they had stainless steel particles, and the local distributor said, “Oh, that’s no threat to health whatsoever.”

Lynn: Didn’t they put the ‘kibosh’ on a couple of million vials?

Fitts: Yes, 1.6 million vials got thrown out.

Lynn: Then they said that there was some sort of magnetic property in them or something to that effect.

Fitts: Yes, and interestingly enough, I read a report that Romania is stopping most of their vaccination program and sending their unused vaccinations to Denmark.

What have the Romanians accomplished? How did they do it?

There is plenty of pushback against the passports. You should see very recently in Europe the protests against the passports have been unbelievable. All over Paris, France, Germany, and a very successful one recently in Amsterdam.

Don’t ever let anybody make you feel that the pushback isn’t there; the pushback is incredible. One of the reasons it’s credible is that the information about adverse events and deaths is moving virally.

Lynn: In fact, I did a short piece on the CDC. Once again, they manipulated the numbers. They talked about the deaths that were reported to the VAERS (Vaccine Adverse Event Reporting System) after receiving the COVID jab, which was close to 7,000. They said that it was 0.0019% among people who received the jab that had reported a death afterward. Well, it’s not. It’s 0.0034% – almost double what they were saying – because they were doing the math against the number of doses as opposed to the number of people who received the doses. They pull this ‘crap’ all the time. It’s very frustrating.

Fitts: In repeated areas, they are saying, “If you’ve had two vaccinations, but you haven’t had the third, then you are unvaccinated.”

Lynn: I saw that.

Fitts: Or they are saying, “If you received the first but not the second, you are unvaccinated.”

Every week I get a report of the ‘games they are playing’ on this in Israel, and it’s frightening. If you look at what is being done to the Israeli people, it’s very frightening.

There is what we know and what we don’t know, and there is much about the ingredients in this vaccine that we don’t know. Under the law, you have to have informed consent. You can’t have informed consent unless you know what’s in it.

If you only look at what we do know, and you had the link to the Doctors for COVID Ethics Gold Standard Symposium, that is a great source to see how they map out all of the things that we know. If you look at what we know, these ingredients are far worse than I thought.

My expectation when it first rolled out is, “Okay, they want to chip us and they want to cull a certain number of groups, but it’s not a full-blown holocaust,” but this could be a full-blown holocaust.

Lynn: I hope not. I talk with people all the time to get firsthand information. “How is your mom doing? How is your brother doing? How is your girlfriend doing?” I want to know. I do think they are rolling it out. It’s different. The ingredients are different, either by batch or by manufacturer. I know many people who got them months ago who have not had any side effects, and I know other people who are having terrible side effects.

Fitts: It’s like a lottery or Russian roulette.

Lynn: And I know people who are having effects by spending a long period of time in close proximity with someone who did receive the jab, and that is even more bizarre to me. I would love to see some science or explanations on that.

Fitts: I have yet to see any good information on transmission other than

women who are breastfeeding and their babies die from the spike protein. Those are some of the most tragic stories.

Lynn: One of the other things stopping the vaccine ID passports is that it's not only there; there is ID.me. There are other avenues that are coming at people trying to get the digital identity. It's because they know they are not going to get everyone onto the vaccine ID passports, so they are pushing the banks to start trying to request that their clients get onto some sort of a digital identity system. We have the biometrics that they are going to start rolling out.

Fitts: Right, and the other thing that we haven't talked about is 5G. Once you have people on the vaccine passport, you have them on the blockchain, you have 100% of their data from birth on, and you have 5G, and can do a level of surveillance and mind-control and influence. Now you're really talking about, not only the bankers controlling your money, but the bankers controlling your mind.

Lynn: They are simultaneously rolling out all these satellites.

Fitts: And it's all funded with our money; we are financing the prison. That's the thing that amazes me.

Your passport series is going to be part of the *3rd Quarter Wrap Up*: we are going to publish it in the *3rd Quarter Wrap Up*. Robert (Dupper) and I were talking about it, thinking, "How are we going to do the hard copy?" because these things are so long.

We finally decided, "This is about freedom. We don't care. We are going to have a very long *3rd Quarter Wrap Up*."

Lynn: We only need to publish *Parts III* and *IV*. I think those are the 'meat' of it.

Fitts: That's true. *Parts III* and *IV* are the real meat, and our subscribers already know *Parts I* and *II*, although those are very useful.

We also will be doing taxation because one of the places where the 'rubber

meets the road' is: Why should we be building our own prison? Part of that is our taxes. Our tax money is being used illegally in criminal ways, not to mention in ways that are building our prisons for us. That is one of the places where the 'rubber meets the road'.

I have to say again what an amazing job you did on this. I can't tell you how grateful I am. You are an incredible researcher, and did an incredible job. I think it can make a huge difference to people who are trying to understand this and how it fits in with the financial system, the health system, and all the different parts.

By the time you finished *Part IV*, I think you were ready to never look at vaccine passports again!

Lynn: I was: I read one too many whitepapers.

Fitts: Then you said to me, "I just want to write about solutions."

So, you came out of *Part IV*. Tell us how you felt and what you would like to do going forward.

Lynn: It's a balance. I go back and forth because I can't help it. I will see things that connect, and I think, "I have to get this information out to people". Then I go right back into the 'mud', and I 'jam' that out. Then I have to come back out, and I think, "We have to think of solutions." I really like creating, and I have an entrepreneurial spirit.

I recently did a piece on *Five Ways to Financial Security While Building Thriving Communities outside the System*. I was trying to come up with five different business models. Some of them involving people with certain skills and others that require absolutely no skills and is something that anyone could do. But in every case, it helps the community and it helps to build our community outside the system so we can become more self-reliant and self-sufficient. I think that is the key because we can 'spin our wheels' as long as we want trying to figure out their game or try to get ahead of their game, but I think it's important at the same time that we implement some of these solutions to protect ourselves for what is 'coming down the pike'.

Fitts: They are basically saying, “If you want to do anything in our system, you have to inject yourself with poison after poison after poison.” That’s the one thing we know from what we do know. The current list of ingredients is a very toxic load; it increases toxicity and suppresses your immune system.

Not only are you then on the vaccine passport ‘treadmill’, but you are on a treadmill where they are making large amounts of vaccines. So if your immune system becomes suppressed, then what is going to ‘blossom’? It will be cancers and shingles and herpes. Now they have a whole new series of mRNA vaccines to treat those.

This is a real treadmill, and the only way to get off the treadmill is to say, “Let’s go build our own community. Let’s go build our own system. Let’s go build our own local food.”

I’m pulling up on the screenshare, ‘Five Ways to Financial Security’. This is part of your conversation about, “What is the action? What are we going to do?”

Of course, that is the conversation that we have to have. I wanted to have your passports articles because you (readers or listeners) have to know what is going on. It’s one thing to know something is bad, and it’s another thing to know that you have to stop it and you have to say no. You can’t adopt it, and you can’t do it.

Lynn: We tried a year and a half ago to warn people, “Look, this is what the masks represent, and this is where it’s leading, so do not wear your masks. There will be no coming back from this once we head down this path.”

Unfortunately, not enough people listened. I was actually very shocked by how many people complied and submitted to everything that they were asked to do. I was very shocked by that.

Fitts: I’ve seen it so many times before that I wasn’t as shocked. I’ve dealt with the mind control in a number of situations.

What did surprise me – and I haven’t had a chance to watch Biden’s speech yet – is how many emails and calls I’ve gotten from people who saw it and were

shocked. I'll use my allusion to the Beck brothers who were the evildoers in the *Yellowstone* TV series with Kevin Costner. They are the people who play dirty. They kidnap your children, they poison your cattle, and they have people assassinated. There is a great scene at the end of the second series when one person asks, "Why do you do this?"

A Beck brother says, "Because nobody ever fights back."

What I've been saying for 20+ years is that if we don't fight back, it's going to get worse. So, it gets worse and worse and worse.

Sometimes it has to get very, very bad for people to face it. Some people are never going to face it, but I see an extraordinary number of highly capable, highly professional people from all walks of life and all professions waking up and saying, "This is nuts. I want nothing to do with this. I'm ready to go build a community."

Ideas that people like you and I have been talking about for years suddenly turn into a serious conversation. I think that's good.

Lynn: In some cases, I think that some of these transformations need to happen. We need to go back 'pre-crazy', out-of-control technology and get back to community. Telemedicine works to our advantage right now. If we didn't have the telemedicine in order to get prophylaxis or treatment, it's 'crazy' what is happening there, too. Now they are insisting that all of the big box stores like Wal-Mart, CVS, Walgreens, Costco, etc. have their pharmacies stop prescribing ivermectin just like they did with HCQ (hydroxychloroquine) last year. It's like they are trying to commit genocide right before our eyes. I can't believe people can't see that.

Fitts: I think it's overwhelming to see it. I remember long ago having to look in the mirror and say, "I'm the patsy," and that is a very hard thing to do; it's hard to believe that you were that 'snookered'.

I remember doing it, and the only thing that forced me to do it was that was what I had to do to stay alive. That was a 'door that I had to walk through' if I was going to survive. Anybody who thinks that the 'middle of the road' is still

there, they will be ‘hunkering down’ on that middle of the road before the road gets pulled out from under them, which it will. That’s the nature of this environment.

I can’t thank you enough. Before we finish, do you have anything else that you want to tell us about passports other than, “Do everything you can to stop them?”

Don’t download that passport onto your smartphone; don’t do it. Throw your smartphone into the lake or the river or the ocean before you do that.

Lynn: Absolutely. I think we covered it quite well. There are so many details in these reports, and we could go on for hours, but I think that people get the main idea; it’s very important to stop this in its tracks now.

Fitts: Corey Lynn, you are the best. Everybody check out Corey’s Digs. Corey, tell them how they can support your work. You have a Patreon account, and you can sign up for updates at your site. Tell us a little about how we can support you.

Lynn: It’s <http://coreysdigs.com>. I have a ‘support’ tab on there – through Stripe, PayPal, or Patreon. I have a swag shop, I offer camping and off-grid supplies, and I have a book shop. So these wonderful, lengthy reports that I do I put into PDF format. For a small fee, you can download them from my site. I keep all of them intact because I know many people want to archive the information.

I also have a weekly podcast with a speaker every Friday as well.

Fitts: Corey’s Digs is a treasure chest, so I hope you check it out.

That’s it. Ladies and gentlemen, don’t worry about whether or not there is a conspiracy. If there is a doubt, read *Vaccine Passports, Parts I, II, III, and IV* because I assure you they are it.

Now would be a good time to start your own. So, if you’re not in a conspiracy, you need to start one. Ladies and gentlemen, goodbye and good luck. Corey,

again, thank you for joining us on *The Solari Report*.

Lynn: Thank you.

Fitts: Have a great day.
